wage costs to state and local governmental entities, based on the annual wage cost for each state and local government worker in the ORG CPS, as detailed on page 6 of Dr. Macpherson's 2012 report, attached hereto as **Exhibit A**. Even if the auditor finds that a specific estimate of costs is not determinable, the auditor should note that state and local government "operating costs could increase by an unknown annual amount that could be significant," through the form of higher wage costs and higher contracting costs.

The proponents of the Initiative Petitions may argue that the Auditor should abandon any state and local cost estimates altogether. The proponents will argue that provisions they have inserted in the statute would mean that state and local government entities will not have to pay higher wages to their employees. Setting aside unjustifiable discrimination against private employers (and "public employees"), the provision is of uncertain legal effect and constitutionality. A "public employer," defined in the initiatives as "the state or a political subdivision of the state" still incurs substantial costs for wages of individuals that are "private employees," rather than "public employees." Cleaning services, food service, and other essential services often rely on state contracts with outside vendors. Sometimes, a contract rate may vary depending on the cost of labor. Even if the contract rate is fixed, it must be re-bid periodically, and that bidding process would take into account the new minimum wage. Plainly, the initiative would impose higher costs for state and local governments in contracting with any private entity and its employees. As a matter of law, it would be insufficient and unfair for the Auditor's fiscal note or summary to simply assume that these costs to state and local governmental entities do not exist.

2. Cost of Unemployment Benefits

a) The effect of inflation on Missouri's minimum wage

CPS–ORG data show that between 2007 and 2015, median nominal wages for adult (25–59 years old) workers in the U.S. grew by 1.68 percent a year. However, Missouri's minimum wage is currently adjusted using "the percentage increase or decrease as of the preceding July over the level as of July of the immediately preceding year of the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W)." Section 290.502, RSMo. Coincidentally (or perhaps not), the CPI-W, over the period from 2006 to 2016, also increased at an average rate of 1.68 percent a year.

Year	CPI-W	Observed inflation %
2006	199.2	
2007	203.7	0.022590361
2008	216.304	0.061875307
2009	210.526	-0.0267124

2010	213.898	0.016017024
2011	222.686	0.041085003
2012	225.568	0.01294199
2013	230.084	0.02002057
2014	234.525	0.019301646
2015	233.806	-0.00306577
2016	234.771	0.004127353

Using Missouri's current inflation-adjusted minimum wage rate and an assumed, constant 1.68 percent increase in the CPI-W, the minimum wage in Missouri will be as follows:

Year	Estimated Minimum Wage
2016	$7.65 (observed)
2017	$7.70 (observed)
2018	$7.85
2019	$8.00
2020	$8.15
2021	$8.30
2022	$8.45
2023	$8.60
2024	$8.75
2025	$8.90
2026	$9.05

b) Calculating job loss attributable to increased minimum wage

At least one outside economist, James Sherk, has already provided an estimate for job loss in Missouri based on a $15 minimum wage. Mr. Sherk calculated the effect of a $15 minimum wage implemented in 2021. Mr. Sherk's figures accounted for inflation by estimating the present value of $15.00 in 2021, rather than estimating an absolute figure for wage inflation in Missouri. Mr. Sherk calculated the present value of $15.00 in 2021 to be $13.57, per hour, based on wage inflation of 1.68 percent. Mr. Sherk evaluated the change from $7.65 per hour to $13.57 per hour (a 77.39% increase), exclusive of agricultural workers. Cumulatively, Mr. Sherk calculated this 77.39 percent increase in wages to reduce employment in the affected workforce by (0.7739*0.677) 52.39%.

Graves Garrett LLC

Mr. Sherk calculated that approximately 40.9% of Missouri's Wage and Salary Workers would be affected by such a $15 minimum wage. Mr. Sherk's calculations reveal that a $15 minimum wage in 2021 would be expected to reduce the number of full-time equivalent jobs in Missouri by approximately 218,000. Based on CPS–ORG data, these figures reveal an affected workforce of approximately 416,086 workers impacted by a $15 minimum wage increase in 2021.

However, in 2014, Dr. Macpherson found, using more conservative, national-level Congressional Budget Office data, that an increase to a $10.10 minimum wage, effective January 1, 2015, would eliminate about 15,700 jobs in Missouri. Dr. Macpherson analyzed the effect of a Missouri $10.10 minimum wage using a model suitable to a national analysis. This analysis predicted a loss of 15,700 Missouri jobs based on a wage increase from $7.50 in 2014 to $10.10 in 2015 (a 34.67% increase).

On the whole, the analysis by Mr. Sherk is more instructive here, since it is more recent, Missouri-specific, and anticipates larger wage changes contemplated by the Initiative Petitions. The most accurate way to determine the estimate of Workers Affected would be to analyze the CPS–ORG data. However, without such data readily available in the time constraints imposed by the fiscal note process, it is reasonable for estimation purposes to assume Mr. Sherk's figures are evenly distributed. Assuming that worker data follows an equal distribution, the Initiative Petitions would be expected to result in the following job losses:

Year of final prescribed wage increase	Wage without IP	Wage mandated by IP	Percentage increase	Percentage of affected workers who lose jobs (Percentage Increase x 0.677 Elasticity)	Estimate of Workers Affected	Estimate of Missouri Workers Unemployed by Initiative
2021	$8.30	$11.00	32.53%	22.02%	174,897	38,512
2022	$8.45	$11.00	30.18%	20.43%	162,262	33,150
2022	$8.45	$12.00	42.01%	28.44%	225,866	64,236
2023	$8.60	$12.00	39.53%	26.77%	212,532	56,895
2023	$8.60	$13.00	51.16%	34.64%	275,061	95,281
2024	$8.75	$12.00	37.14%	25.15%	199,683	50,220
2024	$8.75	$13.00	48.57%	32.88%	261,136	85,861
2025	$8.90	$13.00	46.07%	31.19%	247,695	77,256
2026	$9.05	$13.00	43.65%	29.55%	234,683	69,349

c) The best estimate for a price elasticity of demand for low-skilled labor is -0.677.

As noted by Mr. Sherk, starting wages of $15.00 per hour mean that full-time employee must create at least $38,700 a year in value for his or her employer (including wages, employer payroll taxes, and mandatory healthcare benefits). High minimum wages and mandatory benefit costs make it much harder for less-experienced and less-skilled workers to find jobs, particularly full-time work.

Recent labor economics scholarship has revealed that, accounting for publication bias, a state-specific elasticity of demand for less-skilled workers is, on average, approximately -0.677, though some estimates are even higher, around -1.0.[1] "[E]conomists have extensively studied how businesses respond to higher wages overall, not just minimum-wage increases. On average these studies find a 10 percent increase in labor costs causes firms to reduce employment of less-skilled workers by 6.8 percent in the long run."[2]

While these elasticity estimates are substantial in absolute terms, there is reason to believe that such estimates might still understate the impact of a Missouri state-specific effort to increase the minimum wage. This is so for several reasons. First, traditionally, labor economists view labor as a reasonably difficult input to substitute; however, Missouri businesses have readily available options. There are relatively few barriers to doing business in Missouri's border states, and businesses can easily relocate across a state line to take advantage of more favorable wage (and tax laws). Additionally, substantially raising the cost for Missouri labor, relative to labor sources in other states and other countries, is likely to force many manufacturing jobs in Missouri to disappear entirely. Automation is also a significant risk. The substitution of labor is becoming increasingly easy due to technology advancements and the "sharing" economy, where fewer individuals are "employees" covered by the minimum wage. Finally, a labor "price shock" may result in significant decreases in the demand for goods and services. People make behavioral changes to avoid higher costs, including eating out less often and generally decreasing consumption (or shifting their activities to consumption involving comparatively low amounts of labor) wherever possible.

[1] Sherk, James, "How $15-per-Hour Minimum Starting Wages Would Affect Each State," The Heritage Foundation, http://report.heritage.org/ib4601.

[2] "The coefficients on these estimates imply an elasticity of –0.677 for a study published in 2012 (the most recent year in their data) of long-run unconditional labor demand for low-skilled labor in the U.S., estimated using industry-level administrative panel data and a structural form model." "Estimates that do not account for publication bias tend to slow a long-run elasticity closer to –1.0. See, for example, George Borjas, Labor Economics, 6th ed. (Columbus, OH: McGraw-Hill, 2013), Chapter 4: 'The evidence also suggests that the estimates of the long-run labor demand elasticity cluster around –1, so the long-run labor demand curve is indeed more elastic than the short-run curve.' " Sherk, available at http://report.heritage.org/ib4601.

Graves Garrett LLC

d) Unemployment Benefit Costs

We derived an average unemployment payout by calculating the expected weekly unemployment benefit amount. Based on current data, the expected unemployment weekly benefit amount of a worker making $7.65 an hour, on a 40 hour workweek, is $159.12 per week, for 20 weeks.[3] The expected unemployment weekly benefit amount of a worker making $10.99 an hour is $228.59 per week. The expected unemployment weekly benefit amount of a worker making $11.99 an hour is $249.39 per week. The expected unemployment weekly benefit amount of a worker making $12.99 an hour is $270.19 per week. We assume that workers will seek unemployment insurance for the full twenty weeks authorized under Missouri law, because unemployment attributable to an increase in the minimum wage is structural. In this case, structural unemployment occurs because workers' job skills do not meet the established "price floor" of labor, rendering the worker's skills unmarketable. Assuming an even distribution of workers affected, the average unemployment benefit cost to the state for a worker is calculated as follows:

- For Initiative Petitions 2018-213 through 2018-216, [($159.12+$228.59)/2]*20 = $3,877.10
- For Initiative Petitions 2018-196, 2018-197, 2018-200, 2018-202, and 2018-204 through 209, [($159.12+$249.39)/2]*20 = $4,085.10
- For Initiative Petitions 2018-198, 2018-199, 2018-201, 2018-203, 2018-210 through 2018-212, [($159.12+$270.19)/2]*20 = $4,293.10

Consistent with Dr. Macpherson's 2012 report, it would be reasonable for the Auditor to assume that 35% of unemployed workers will receive unemployment benefits. Combining these numbers leads to the following estimates:

Year of final prescribed wage increase	Estimate of Missouri Workers Unemployed by Initiative	Estimated Unemployment Amount Per Worker	Estimated Total Unemployment Premiums Paid	Average Annual Unemployment Premiums Paid by State
2021 ($11)	38,512	3,877.10	$52,260,206.32	$17,420,068.77
2022 ($11)	33,150	3,877.10	$44,984,052.75	$11,246,013.19
2022 ($12)	64,236	4,085.10	$91,843,669.26	$22,960,917.32
2023 ($12)	56,895	4,085.10	$81,347,617.58	$20,336,904.39

[3] https://labor.mo.gov/DES/Claims/calculator. A 2015 law decreased the unemployment benefit period from 20 weeks to 13 weeks, but the Supreme Court of Missouri struck down the law in July 2016.

2023 ($13)	95,281	4,293.10	$143,167,801.39	$28,633,560.28
2024 ($12)	50,220	4,085.10	$71,803,802.70	$11,967,300.45
2024 ($13)	85,861	4,293.10	$129,013,450.69	$21,502,241.78
2025 ($13)	77,256	4,293.10	$116,083,706.76	$16,583,386.68
2026 ($13)	69,349	4,293.10	$104,202,767.17	$13,025,345.90

3. Impact on State Income Tax Revenue

The 2012 analysis prepared by Dr. Macpherson may also be used as a reference in calculating the effect of the initiative petitions on state income tax revenue. Here, again, it is reasonable to assume that our "affected workers" are evenly distributed, though precise CPS–ORG data would also provide a reliable estimate. Here, the increased income tax revenue is the additional income tax paid by workers whose wages increase. There is a loss of revenue, however, in the form of decreased income tax paid by workers whose wages decrease and businesses who absorb the increased cost of labor, rather than passing it along to customers.

For the purposes of these estimates, we assume that workers work 40 hours a week and 52 weeks per year:

Year of final prescribed wage increase	Estimate of Workers Affected	Estimate of Missouri Workers Unemployed by IP	Estimate of Missouri Workers with Increased Wages	Annual Increase in Wages Paid to Workers who get Wage Increase in Final Year	Annual Decrease in Wages Paid to Workers now Unemployed
2021 ($11)	174,897	38,512	136,385	$382,969,080.00	$108,141,696.00

2022 ($11)	162,262	33,150	129,112	$342,405,024.00	$87,913,800.00
2022 ($12)	225,866	64,236	161,630	$596,737,960.00	$237,159,312.00
2023 ($12)	212,532	56,895	155,637	$550,332,432.00	$201,180,720.00
2023 ($13)	275,061	95,281	179,780	$822,673,280.00	$436,005,856.00
2024 ($12)	199,683	50,220	149,463	$505,184,940.00	$169,743,600.00
2024 ($13)	261,136	85,861	175,275	$774,715,500.00	$379,505,620.00
2025 ($13)	247,695	77,256	170,439	$726,750,021.03	$329,419,584.00
2026 ($13)	234,683	69,349	165,334	$679,192,072.00	$284,885,692.00

These net wage increases will lead to corresponding increases in state income tax collections. Traditionally, it has been assumed that about 50% of affected workers will pay 6% income tax, while the other 50% of workers pay no state income tax. This assumption may be less accurate at the higher wage increases contemplated by the Initiative Petitions. Accordingly, figures are also displayed assuming that about 75% of affected workers will pay 6% income tax, while the other 25% of workers pay no state income tax.

Annual Net Increase in Wages Paid To Workers	Annual Income Tax Increase from Wage Increase (50% pay tax)	Annual Income Tax Increase from Wage Increase (75% pay tax)
$274,827,384.00	$8,244,821.52	$12,367,232.28
$254,491,224.00	$7,634,736.72	$11,452,105.08
$359,578,648.00	$10,787,359.44	$16,181,039.16
$349,151,712.00	$10,474,551.36	$15,711,827.04
$386,667,424.00	$11,600,022.72	$17,400,034.08
$335,441,340.00	$10,063,240.20	$15,094,860.30
$395,209,880.00	$11,856,296.40	$17,784,444.60
$397,330,437.03	$11,919,913.11	$17,879,869.67
$394,306,380.00	$11,829,191.40	$17,743,787.10

Graves Garrett LLC

Based on these figures, Missouri businesses must also decide whether to pass along any increase in wage costs (wages and mandatory payments).[4]

Year of final prescribed wage increase	Annual Cost to Business from Increased Wage	Annual Decreased Corporate Income Tax if cost is fully absorbed	Annual Decreased Corporate Income Tax if cost is 50% absorbed
2021 ($11)	$412,266,214.62	$25,766,638.41	$12,883,319.21
2022 ($11)	$368,599,008.34	$23,037,438.02	$11,518,719.01
2022 ($12)	$642,388,413.94	$40,149,275.87	$20,074,637.94
2023 ($12)	$592,432,863.05	$37,027,053.94	$18,513,526.97
2023 ($13)	$885,607,785.92	$55,350,486.62	$27,675,243.31
2024 ($12)	$543,831,587.91	$33,989,474.24	$16,994,737.12
2024 ($13)	$833,981,235.80	$52,123,827.23	$26,061,913.62
2025 ($13)	$782,346,397.64	$48,896,649.85	$24,448,324.93
2026 ($13)	$731,150,265.50	$45,696,891.59	$22,848,445.80

Assuming businesses absorb half of the cost of increased wages, and 75 percent of affected workers pay the new, higher taxes, the effect on state income tax collections is estimated to be:

Year of final prescribed wage increase	Annual Net Income Tax Revenue Loss
2021 ($11)	($516,086.93)
2022 ($11)	($66,613.93)
2022 ($12)	($3,893,598.78)
2023 ($12)	($2,801,699.93)
2023 ($13)	($10,275,209.23)
2024 ($12)	($1,899,876.82)
2024 ($13)	($8,277,469.02)
2025 ($13)	($6,568,455.26)
2026 ($13)	($5,104,658.70)

[4] A healthcare benefit cost estimate is not available based on the time limitations imposed by this fiscal note.

Graves Garrett LLC

4. Sales tax revenue gain or loss

Projecting any increase in sales tax revenue resulting from an increased minimum wage would require the auditor's office to conclude, based on data separate and apart from the sheer conjecture typically offered by political activist groups: (1) the net effect on consumer disposable income and (2) the percentage of a consumer's disposable income that is spent on goods subject to the sales tax, taking into consideration that the scope of Missouri's sales tax has been truncated by a voter-approved constitutional amendment from November 2016.

Typically, the Auditor's office multiplies the total increase in worker earnings (which should be adjusted for employment reductions) and multiplies the result by 25 percent, then multiplying that figure by the Missouri the population weighted combined average state and local sales tax in Missouri, 7.81%.[5] Based on this estimate, the population-weighted combined average local sales tax is 3.585%.

However, it would be deceptive to fail to account for sales tax losses from workers whose wages are eliminated or sales tax losses from reduced business profits (attributable to the higher wages paid), which will lower spending by business owners. The first figure is calculable by determining the total annual wages (adjusted for employment deductions) for all workers who lose jobs due to a minimum wage hike, multiplied by 25 percent. The second number is calculable by multiplying the total increase in worker earnings (multiplied by 1.0765 to account for Social Security and Medicare taxes) by approximately 15 percent.[6]

Year of final prescribed wage increase	Annual Net Increase in Wages Paid To Workers	New Wages Spent on Sales Tax Items	Annual Cost to Business from Increased Wage	Annual Business Income No Longer Included in Sales Tax Base (50% passed-through)
2021 ($11)	$274,827,384	$68,706,846	$412,266,214.62	($61,839,932)
2022 ($11)	$254,491,224	$63,622,806	$368,599,008.34	($55,289,851)
2022 ($12)	$359,578,648	$89,894,662	$642,388,413.94	($96,358,262)
2023 ($12)	$349,151,712	$87,287,928	$592,432,863.05	($88,864,929)

[5] http://taxfoundation.org/sites/taxfoundation.org/files/docs/LOST--2015.png.
[6] This estimate would also need to be adjusted to reflect certain employers' mandate under the Affordable Care Act to provide healthcare coverage and pay 60 percent of such coverage.

2023 ($13)	$386,667,424	$96,666,856	$885,607,785.92	($132,841,168)
2024 ($12)	$335,441,340	$83,860,335	$543,831,587.91	($81,574,738)
2024 ($13)	$395,209,880	$98,802,470	$833,981,235.75	($125,097,185)
2025 ($13)	$397,330,437	$99,332,609	$782,346,397.64	($117,351,960)
2026 ($13)	$394,306,380	$98,576,595	$731,150,265.51	($109,672,540)

Accordingly, the annual estimations of the effects on state and local revenue, and total state economic impact are as follows:

Year of final prescribed wage increase	Annual Net Income Tax Revenue Loss	Annual Net Effect on State Sales Tax	Total Annual Effect on State Tax Revenue	Total Net Loss to State Government from Taxes and Unemployment Insurance	Annual Net Effect on Local Sales Tax
2021 ($11)	($516,086.93)	$290,127.11	($225,959.82)	($17,646,028.59)	$246,178.86
2022 ($11)	($66,613.93)	$352,067.34	$285,453.41	($10,960,559.78)	$298,736.43
2022 ($12)	($3,893,598.78)	($273,087.10)	($4,166,685.88)	($27,127,603.19)	($231,720.06)
2023 ($12)	($2,801,699.93)	($66,628.31)	($2,868,328.24)	($23,205,232.64)	($56,535.50)
2023 ($13)	($10,275,209.23)	($1,528,364.68)	($11,803,573.91)	($40,437,134.18)	($1,296,849.08)
2024 ($12)	($1,899,876.82)	$96,566.47	($1,803,310.36)	($13,770,610.81)	$81,938.65
2024 ($13)	($8,277,469.02)	($1,110,951.72)	($9,388,420.74)	($30,890,662.52)	($942,665.55)
2025 ($13)	($6,136,139.31)	($761,317.55)	($6,897,456.87)	($23,480,843.55)	($645,993.71)
2026 ($13)	($5,104,658.70)	($468,803.67)	($5,573,462.37)	($18,598,808.26)	($397,789.62)

5. Damage to small business

Additionally, any proponent or opponent fiscal note submission is required, pursuant to Missouri law, to state the impact of the initiative on small businesses. According to analysis by the Employment Policies Institute, 40 percent of the minimum wage workforce is employed at businesses with fewer than 50 employees. [7] The impact on extra costs to small business may be more significant than even this 40% figure suggests. Small businesses are more easily shut down by input price increases than large businesses, which have greater access to capital to weather the

[7] https://www.epionline.org/oped/who-really-employs-minimum-wage-workers/

storm. Clearly, small businesses that do not shut down due to increases in the minimum wage will pay higher costs, estimated at about 40% of business' total increased costs, described above.

Conclusion

In conclusion, the State Auditor should attempt to quantify the increased cost to be borne by state and local government entities through increased contracting costs as a result of an increase to the minimum wage. This direct cost is outlined in Section 1.

Indirect costs are outlined in Sections 2 through 5, and show a net loss. Although such second-order effects more difficult to predict, a net loss is easily the most likely outcome. Significantly, this result is only obtainable if the Auditor reviews both the "credit" and "debit" sides of the transfer of wealth from businesses to workers. The Auditor should refrain from taking the proponents' likely invitation to consider and present only the "credit," side, and should attempt to provide a complete picture of all effects of a minimum wage increase, including the loss of revenue to state and local governments from individuals who lose employment. Only conveying (or quantifying) the potential for gain, without fairly conveying the likelihood of net loss, would be deceptive and unfair.

The State Auditor's previous 2018 fiscal notes are a good model. Each of the fiscal notes for the Initiative Petitions should follow the already-established format and state that:

> "[O]perating costs could increase by an unknown annual amount that could be significant. State and local government tax revenue could change by an unknown annual amount ranging from a $## million decrease to a $## million increase depending on business decisions."

Should you desire further detail or have any questions about this fiscal impact statement, please do not hesitate to contact me.

Sincerely,

Edward D. Greim

ABOUT THE MISSOURI RESTAURANT ASSOCIATION

With origins dating back to 1916, the Missouri Restaurant Association (MRA) is a statewide trade association representing over 1,500 member establishments. The association's membership is diverse, and includes full service, fast casual, and quick service restaurants, cafeterias, hotels, schools, institutions, contract feeders, and ancillary foodservice providers such as theme parks. The association has been successful in securing support from virtually every segment of the foodservice and hospitality industry.

MRA includes seven chapters as extensions of the parent organization, each with its own Officers, Board of Directors, and limited budget. The association is governed by a Board of Directors comprised of five Officers, 33 Directors, and each President of the seven affiliated chapters.

MRA is dedicated to serving the needs of the foodservice and hospitality industry, enhancing and improving its growth and development, assisting and educating its members in operating more effectively, improving the political and social environment in which the industry conducts business, for the benefit of its members, patrons, employees, and the well-being of the community.

David A. Macpherson is the E.M. Stevens Professor of Economics at Trinity University. He received undergraduate and doctoral degrees in economics from Pennsylvania State University.

Dr. Macpherson has published over 60 articles in leading economics and real estate journals including Review of Economics and Statistics, Industrial and Labor Relations Review, Journal of Labor Economics, Journal of Human Resources, and Journal of Real Estate Economics and Finance. His research has been funded by a variety of entities including the National Science Foundation, Florida Legislature, and the National Association of Realtors. He is co-author of the undergraduate labor economics text, Contemporary Labor Economics, as well as the principles of economics text, Economics: Private and Public Choice. He is included in Who's Who in Economics, Fourth Edition, which includes the 1,200 most frequently cited economists.

THE IMPACT OF A $10.10 MINIMUM WAGE ON JOBS AND TAXPAYER COSTS IN MISSOURI

June 2014

Economic Analysis by **Dr. David Macpherson**

Executive Summary 4
Results 5
Technical Appendix 7

EXECUTIVE SUMMARY

Missouri's minimum wage of $7.50 is linked to rise in most years with the inflation rate. But some state legislators and labor unions would like to raise that figure even higher. For instance, a recent labor union-organized bus tour in the state promoted a $10.10 minimum wage in St. Louis.

Proponents have enthusiastically pointed to the benefits of the $10.10 policy. But there's been far less discussion of the costs involved with a $10.10-an-hour minimum wage—both the cost on employment, and the cost to taxpayers.

In this study, labor economist David Macpherson of Trinity University uses Census Bureau data to estimate the impact on Missouri's labor market and budget from raising the minimum wage to $10.10 an hour. He also provides separate results for the St. Louis metropolitan area.

Dr. Macpherson's employment estimates follow the methodology used by the nonpartisan Congressional Budget Office in its report earlier this year estimating the impact of a $10.10 minimum wage nationwide, which in turn relied on 60 different empirical studies to formulate its estimates.

Statewide, he finds that over 15,000 jobs would be lost at the $10.10 wage level—with 9,300 of those jobs being held by women. In the St. Louis metropolitan area, approximately 4,800 jobs would be lost from a $10.10 minimum wage.

The cost to taxpayers would be significant: There are approximately 40,000 state and local employees whose wages would be affected by the $10.10 increase in Missouri, for a combined cost to taxpayers of $87 million annually.

Raising wages is an admirable goal, but the evidence suggests that accomplishing this goal with a blunt wage mandate could do more harm than good.

RESULTS

The minimum wage is one of the most hotly-debated topics in the political world. Some legislators claim that a higher base wage will stimulate the economy; others claim that it will reduce jobs when affected employers can't offset the higher costs through higher prices.

Economists, who have studied the issue since the late 1940s, tend to take a skeptical view of minimum wage increases. Since the early 1990s, for instance, roughly 85 percent of the most credible research on the minimum wage points to job loss for less-skilled groups. The nonpartisan Congressional Budget Office (CBO), in an evaluation of President Obama's proposed $10.10 minimum wage increase, reviewed 60 different studies and concluded that the policy would eliminate 500,000 jobs if enacted.

The estimates that follow, of the employment impact of a higher minimum wage on Missouri's labor market, were performed by Dr. David Macpherson of Trinity University. Dr. Macpherson followed closely the methodology used by the CBO in its 2014 report. Dr. Macpherson also estimates the taxpayer costs of a higher minimum wage, as many state and local public employees will see their earnings increase when the minimum wage rises.

Dr. Macpherson's methodology is presented in detail in a technical appendix.

Estimated Employment Effects of a $10.10 Minimum Wage in Missouri

Statewide, Dr. Macpherson finds that increasing the minimum wage to $10.10 would eliminate over 15,000 jobs—approximately 60 percent of which are jobs held by women. The bulk of the job losses would be concentrated among individuals with a high school degree or less, and among people who work in the retail or leisure & hospitality industries.

(Note: Totals have slight discrepancies due to rounding.)

City-Specific Minimum Wage Employment Impacts

The city of St. Louis has been the subject of a number of protests calling for a higher minimum wage. Dr. Macpherson analyzed the employment impact of a $10.10 minimum wage in the St. Louis metropolitan area, providing breakouts by gender and education where the data permits. He estimates that the wage hike would eliminate approximately 5,000 jobs—just over half of which would be jobs held by women.

RESULTS CONTINUED

Missouri Taxpayer Costs of a $10.10 Minimum Wage

Dr. Macpherson estimates that approximately forty thousand state & local public employees would be affected by a minimum wage increase to $10.10 an hour. These additional wage costs translate to new costs for state and local taxpayers. Following the methodology described in detail in the technical appendix, Dr. Macpherson estimates both the straight wage cost of a $10.10 minimum wage, as well as the total compensation cost with Social Security, Medicare, workers compensation, and unemployment insurance included. Statewide, taxpayers would shoulder an additional $87 million in costs if the base wage was increased to $10.10 an hour and public employees were covered by the new wage.

Missouri Taxpayer Costs of a $10.10 Minimum Wage

TECHNICAL APPENDIX

Estimating Employment Loss and the Cost to State and Local Government of an Increase in the Minimum Wage

Dr. David Macpherson
E.M. Stevens Professor of Economics
Trinity University

This paper describes how we estimate the employment loss and the cost to state and local governments of a proposed increase in the minimum wage effective on January 1, 2015.

Data and Sample

First, we use data from the Current Population Survey (CPS) Outgoing Rotation Groups (ORG) from January 2011 through December 2013. For each worker in the sample, we calculate their wage rate. We also adjust the wage rate to reflect a forecast of wages in 2015. This is done in two steps. First, based on legislation enacted as of April 2014, we estimate the minimum wage that would be in effect in January 2015 for each state and city that we consider. If a state or city has an indexed minimum wage, we increase the January 2014 state or city minimum wage by the Congressional Budget Office (CBO) inflation forecast for 2014 of 1.7%.

Since we use data from 2011 through 2013, we also follow the CBO approach for forecasting what the wage distribution would be in 2015. This is done in two steps. First, we adjust wages observed prior to 2013 to reflect 2013 minimum wage legislation. For example, if the minimum wage in a state was $7.25 in 2011 and grew to $8.00 by 2013, anyone who earned between $7.25 and $8.00 in 2011 would have their wage increased to $8.00. After wages are adjusted to 2013 levels, we assume that all wages grow by 2.9% in 2014. Using the resulting 2015 distribution of wages, we adjust for minimum wage legislation that would increase the minimum between 2013 and 2015. Anyone earning a wage between the 2013 and 2015 minimum wage is assigned a wage matching the 2015 minimum wage.

After generating the forecast 2015 distribution of wages reflecting wage growth and existing minimum wage legislation, we identify workers who would be affected by additional changes to the 2015 minimum wage as those with wages between the predicted minimum wage legislated for 2015 (or up to $.25 below it) and the proposed minimum.

To estimate the number of affected workers, we take two steps. First, for each state, we estimate the number of affected workers for 2013. Second, we adjust the weights in the 2011 and 2012 data so that the state-specific number of affected workers implied by the 2011 and 2012 data matches that for 2013. This adjustment is designed to correct for the changing economic climate as the economy recovers from the great recession and to generate estimates that are as close as possible to the most recent data (2013). After we adjust the 2011 and 2012 weights, we estimate the number of affected workers by summing their earnings weights and dividing the total by 36 (the number of months of data).

[1] Also, following CBO, anyone earning up to $.25 less than the 2011 minimum wage would have their wage increased by the amount that the minimum wage increased (i.e. a $7.00 wage would be increased to $7.75 in this example). This approach is used to adjust for the fact that many workers round their answers when asked about their wage.

TECHINCAL APPENDIX CONTINUED

Employment Loss

To estimate employment loss, for each affected worker we compute:

L = e *(Proposed Min Wage /Min Wage 2015 – 1)

where e is an assumed elasticity of employment with respect to changes in the minimum wage, Min Wage 2015 is the minimum wage currently legislated for 2015, and Proposed Min Wage is the minimum wage that is being proposed for 2015. Thus, for example, if a worker is projected to earn the federal minimum of $7.25 in 2015, the expected reduction in employment resulting from a $10.10 minimum wage in 2015 if e=.45 is .45*(10.10/7.25 – 1) = .18. That is, for every 100 workers currently earning the federal minimum, the expectation is that 18 would lose a job if the minimum wage elasticity is .45.

To estimate the aggregate employment loss in the economy, we use earnings weights to sum L across workers. We also follow the Congressional Budget Office (2014) and use an elasticity of 0.15 for non-teenagers and 0.45 for teenagers.

Cost to State and Local Government

We use the same data to estimate the cost to state and local government of a proposed minimum wage hike. We apply the same definition of affected workers described above and estimate the number of state and local government workers affected by a minimum wage hike. We do not, however, assume that there is any job loss for state and local workers as we do not have an appropriate elasticity estimate specific to state and local workers. To the extent that state or local governments reduce hours or employment in response tothe minimum wage hike, our estimate of the cost of the hike would be overstated.

To estimate the increase in annual payroll cost resulting from an increase in the minimum wage, we estimate the increase in annual cost for each worker as:

(Proposed Min Wage-Min Wage 2015)*weekly hours*52

We then multiply the increase in annual cost by the earnings weight for each worker and sum across workers. Since an increase in wages also requires increased employer contributions for Social Security, Medicare, workers' compensation and unemployment insurance, we apply an estimate of the payroll tax rate for these mandatory programs to calculate the additional cost for these programs.

For each state and city considered, we provide tables summarizing the number of affected workers, employment loss, and the distribution of employment loss by sex, education, race, age and industry. Given that we use three years of data, a rule of thumb for minimum sample size required to achieve a reasonably accurate estimate of the employment loss is to require at least 30,000 people be in the relevant category. For example, if there are fewer than 30,000 people projected to be in a particular industry category, the Bureau of Labor Statistics would not report the estimate due to a lack of reliability based on the variance of the estimate relative to its mean.

In addition to the estimate of employment loss, for each state or city considered, we estimate the number of state and local workers that would be affected by the minimum wage hike and the total annual cost to government in terms of wages and total compensation. As with the employment estimates, we advise caution in interpreting estimates that are based on fewer than 30,000 affected workers.

[3] Congressional Budget Office, "The Effects of a Minimum-Wage Increase on Employment and Family Income," February 2014.

[4] For workers paid by the hour the reported hourly wage was used. For workers who are not paid by the hour, we calculate the hourly wage by dividing usual weekly earnings by usual weekly hours. Overtime pay was calculated as time and one-half for hours above 40 hours for hourly workers.

[5] The assumed payroll tax for Medicare and Social Security is 7.65 percent. To estimate the payroll tax for workers' compensation and unemployment insurance, we use unpublished data from the 2010 Employer Cost of Employee Compensation database for state and local workers in the relevant region in 2010.

FISCAL ANALYSIS
OF
PROPOSED STATUTORY INITIATIVE PETITIONS 2012-084 AND 2012-085

Prepared for

Victor Allred versus Robin Carnahan and Thomas Schweich
Circuit Court of Cole County, Missouri

FISCAL ANALYSIS
OF
PROPOSED STATUTORY INITIATIVE PETITIONS 2012-084 AND 2012-085

I. Introduction

This report was undertaken at the request of counsel representing plaintiffs in the case of Victor Allred versus Robin Carnahan and Thomas Schweich. As part of the basis of the lawsuit, the plaintiffs allege that the fiscal note summaries for proposed statutory initiative petitions 2012-084 and 2012-085 are insufficient and unfair. I was asked by counsel to evaluate the fiscal impact of proposed statutory initiative petitions 2012-084 and 2012-085.

The results of my analysis indicate:

(1) labor costs to state and local government entities, based on state auditor fiscal notes, will rise by more than $1,352,182. A more inclusive estimate indicates that state and local government labor costs will increase by $16,003,712;

(2) unemployment benefit costs will rise by $4,397,510 during the first year of the minimum wage increase;

(3) individual income tax revenue will rise by at most $4,078,088;

(4) the loss in corporate income tax revenue could be as high as $9,243,105;

(5) state and local sales tax revenue will rise by at most $2,919,327;

(6) during the first year: state and local governments will incur increased costs of $20,401,222; the change in state and local government revenue will

range from -$2,245,690 to +$6,997,415; and the net state and local government fiscal impact will range from -$22,646,912 to -$13,403,807.

The report is organized as follows. My qualifications to prepare this report are contained in Section II. Section III describes the data and records I relied upon for this report. Section IV reviews the estimated fiscal impact of proposed statutory initiative petitions 2012-084 and 2012-085. A summary and my conclusions are provided in Section VI.

II. Qualifications

I am currently the E.M. Stevens Professor of Economics at Trinity University in San Antonio, Texas. Previously, I was employed by Florida State University as Director of the Pepper Institute on Aging and Public Policy and the Rod and Hope Brim Eminent Scholar in Economics. I have taught both undergraduate and graduate Econometrics (statistical analysis of economic data), and Labor Economics. I have published over 50 articles in peer-reviewed professional journals.

I am currently serving on the editorial board of the *Journal of Forensic Economics*, which is a peer-reviewed journal. I have also served as a reviewer or 'referee' for 24 peer-reviewed journals, including the *Journal of Human Resources, Journal of Labor Economics, Quarterly Journal of Economics,* and the *Review of Economics and Statistics*. Based upon these experiences, I am very familiar with the scholarly and professional research process and the concept of peer review.

I have prepared numerous analyses and reports that use statistical methods as applied to specific questions. I have been responsible for developing the techniques and approaches required for these analyses. I routinely use computers and statistical software packages to assist me in my analytical work. I have been qualified as an expert witness on statistical analysis of employment discrimination and economic damages in state courts in Florida and Georgia and Federal Courts, and I have given expert testimony. I have prepared analyses and offered testimony on behalf of both plaintiffs and defendants.

Details of my qualifications are reflected in my current resume and legal cases, attached as Appendix A to the report.

III. Data and Records

I reviewed the following materials in preparing this report.

- Plaintiff's Complaint
- Material cited in footnotes below.

IV. Fiscal Impact

A. Overview

The proposed statutory initiative petitions 2012-084 and 2012-085 contain many elements in common. Both initiatives would increase the Missouri minimum wage to $8.25 per hour, alter the exemption for retail and service firms, raise the cash wage of tipped workers from 50% to 60% of the minimum wage, and increase the statute of limitation from two to three year for underpayment claims.

The initiatives differ in their linkage to the federal minimum wage. Initiative petition 2012-084 requires that the state minimum wage be automatically increased to the

federal minimum wage if it is higher than the state minimum wage. Initiative petition 2012-085 does not have such a linkage. It only requires that workers be paid the higher of the state minimum wage or the federal minimum wage. The linkage to the federal minimum wage will cause the state minimum wage to be higher under initiative petition 2012-084 over time. This is because the state minimum wage, in contrast to the federal minimum wage, is adjusted for inflation as measured by the Consumer Price Index.

An increase in the minimum wage in Missouri will affect state and local government entities in two ways. First, it will directly increase the cost of labor to state and local government entities. This will occur due to the increase in wages of state and local government workers earning between the existing minimum wage of $7.25 and the new minimum wage of $8.25.[1] In addition, workers laid off due to the minimum wage increase can collect unemployment benefits. The state government will bear the cost of unemployment benefits of these workers for the first 20 weeks. Second, state and local government may gain increased revenue through higher income tax and sales taxes paid by workers affected by the minimum wage who remain employed. However, state and local government will suffer reduced tax revenue to the extent the higher wage cost lowers profits of businesses.

The following sections estimate the cost and revenue effects to state and local government entities of the proposed minimum wage increase.

[1] Information about the minimum wage in Missouri is available at http://www.labor.mo.gov/DLS/minimumwage/.

B. Direct Labor Cost Impact on State and Local Government Budgets

There are two possible ways to measure the direct labor cost on state and local government budgets. First, one can use the information included in the fiscal notes prepared by the State Auditor regarding the proposed initiatives. It is important to note that the fiscal notes provide an incomplete and thus too low estimate of the direct labor cost. The fiscal notes indicate that the Office of Administration's (OA) Division of Personnel reported that as of September 2011 there were 834 state workers who would be affected by an increase of the minimum wage to $8.25 and the "approximate annual cost" would be more than $540,000.

This OA estimate excludes seasonal workers such as State Fair employees, State Parks Employees, and tax season staff. The Division of Revenue noted its labor cost would rise by $40,000. The Division of Natural Resources stated they have over 500 workers who would be affected by the increase, but did not provide an estimate of the cost. The State Fair hired 745 workers that would be affected, but no cost estimate was provided.

Thus, the cost to state government, based on the fiscal notes, would be more than $580,000.

The fiscal notes also provide an incomplete and thus too low measure of the cost to local government and public educational institutions. Many cities and educational institutions did not respond to Office of Auditor's survey or provide an estimate of the cost of the higher minimum wage. The City of Columbia, City of Jefferson, City of

Joseph, Linn State Technical College, and Metropolitan Community College did provide such an estimate. The total cost to these five institutions is $772,182.

Based on the fiscal notes, the cost to state and local government entities of the increase in the minimum wage to $8.25 will be more than $1,352,182.

Second, data from the U.S. Census Bureau's Current Population Survey (CPS) can also be used to calculate the cost of the increased labor cost to state and local government entities in Missouri. Using the data from January 2010 to December 2011 Outgoing Rotation Group (ORG) CPS, I calculated that 17,089 state and local government workers would be affected by the minimum wage increase. I defined affected workers as those individuals earning between $7.00 and $8.24 per hour. Though the minimum wage was $7.25 per hour during this period, I also included those workers reporting earnings of $7.00 to $7.24 since some individuals may round their wage rate. I calculated the annual wage cost for each state and local government worker (i) in the ORG CPS as:

$$Annual\ Wage\ Cost_i = (\$8.25 - current\ wage_i) * weekly\ hours_i * 52.$$[2]

The average annual wage cost increase was $870. I summed the cost over each worker (i) to obtain the total wage cost to state and local government entities in Missouri of $14,866,430.

The increased wage cost is not the only labor cost to state and local government entities of the minimum wage increase. Employers are required to pay 7.65% of their wage costs in Social Security and Medicare taxes. Thus, the total labor cost of the minimum wage increase will be 1.0765 times $14,866,430 or $16,003,712.

---

[2] I assume that persons reporting an hourly wage rate between $7.00 and $7.24 are actually earning $7.25 per hour.

C. Unemployment Benefit Impact

The higher minimum wage will cause firms to reduce their level of employment.[3] As a result, the number of unemployed workers will increase. Thus, another important fiscal cost of the minimum wage increase is the cost of the unemployment insurance benefits for the workers laid off as a result of the minimum wage increase.

To calculate the cost to the unemployment benefits program, I first calculated the number of workers laid off. To do so, I calculated a probability of job loss for each affected Missouri worker (i) in the January 2010 to December 2011 ORG CPS:

$$Probability\ Job\ Loss_{\ i} = \frac{(\$8.25 - Current\ Wage_i)}{Current\ Wage_i} * elasticity_i.$$

I used the preferred employment elasticity (i.e., sensitivity of employment to wage changes) contained in Sabia and Burkhauser (2010), which was -0.6 for individuals aged 16 to 29 without a high school degree and -0.2 for all other individuals. The sole exception was for state and local government workers, where I assumed an elasticity of zero.[4] The sum across all affected workers yielded an estimated job loss of 5,745 jobs.

The next step was to calculate the weekly benefit for the average unemployed worker. Using the benefits calculator on the Missouri unemployment benefits web site and the wage income of average private-sector affected worker ($10,937), yields an average weekly benefit of $109.36[5]. The state of Missouri pays the first 20 weeks of benefits.[6] Thus, each eligible unemployed worker could receive a total of $2,187.20 in

---

[3] For a survey of research regarding the effect of the minimum wage on employment, see David Neumark and William L. Wascher, *Minimum Wages* (Cambridge, MA: MIT Press, 2008).
[4] Joseph J. Sabia and Richard V. Burkhauser, "Minimum Wages and Poverty: Will a $9.50 Federal Minimum Wage Really Help the Working Poor?" *Southern Economic Journal* (January 2010): 592-623.
[5] http://www.labor.mo.gov/DES/Claims/calculator.asp
[6] See http://www.labor.mo.gov/DES/Claims/

benefits paid for by the state of Missouri. These jobs are permanently eliminated and so it is appropriate to calculate the full amount of benefits for each worker.

Unemployment insurance, however, does not cover all unemployed workers. For example, it does not cover people who leave a job voluntarily, people looking for their first job, and re-entrants who previously left the labor force voluntarily. Furthermore, some individuals don't apply for benefits even though they are eligible. I assume that 35% of the unemployed workers will receive unemployment benefits based on analysis by Wenger (2001).[7]

The last step is to calculate the total cost to the Missouri unemployment benefits program. This done by multiplying the number of jobs lost (5,745) times the average benefit amount ($2,187.20) times the percent of unemployed individuals collecting benefits (35%). This calculation yields a figure of $4,397,510. This cost would be borne only during the first year of the minimum wage increase. The inflation adjustments in the minimum wage will also yield costs to the unemployment insurance program, but it is not possible to estimate the amount.

D. Impact on State Income Tax Revenue

The state of Missouri will gain increased revenue through higher income tax taxes paid by workers affected by the minimum wage who remain employed. However, it will

[7] Jeffery Wenger. "Divided We Fall: Deserving Workers Slip through America's Patchwork Unemployment Insurance System." *Economic Policy Institute*, 2001. Sabia and Burkhauser (2010) make the same assumption in their calculation of the amount of unemployment benefits generated by a minimum wage increase.

suffer reduced corporate income tax revenue to the extent the higher wage cost lowers profits of businesses.

To calculate the impact on individual income tax revenue, I again used data from January 2010 to December 2011 ORG CPS. I defined affected workers as those Missouri individuals earning between $7.00 and $8.24 per hour.[8] I used the following formula to estimate the change in income tax revenue:

$$\Delta Tax\ Revenue_i = (Tax_After_i - Tax_Before_i) - Prob_Job_Loss_i * Tax_Before_i,$$

where Tax_After_i is the income tax paid by worker i after the minimum wage increase. Tax_Before_i is the income tax paid by worker i after the minimum wage increase, and $Prob_Job_Loss_i$ is the probability of job loss for worker i. The first term shows the change in individual income tax revenue assuming no job loss and the second term shows the loss in tax revenue due to the employment loss caused by the minimum wage increase.

The income tax calculations were based on two assumptions.[9] First, the 50% percent of affected workers who were under the age 25 who were assumed to be dependents on another person's tax return. As a result, it was assumed that the affected workers' earnings were taxable at the maximum Missouri income tax rate of 6% both and after the minimum wage increase.[10] Second, all persons age 25 and older were assumed to be paying little or no income tax after exemptions and deductions. Thus, about 50% of the earnings increase will be taxed at a rate of 6%.

---

[8] I again assume that persons reporting an hourly wage rate between $7.00 and $7.24 are actually earning $7.25 per hour. The annual earnings level was calculated as the worker's wage rate times usual weekly hours worked times 52.

[9] The same assumptions are used in the State Auditor's fiscal notes for the initiatives.

[10] This assumption will overstate the revenue increase as 20% of affected workers under the age 25 are living by themselves and some of these individuals will not be a dependent on another person's tax return.

The tax calculations reveal an increase in income tax revenue increase to the state. Assuming no workers were laid off by the minimum wage increase, income tax revenue would rise by $6,043,534. However, the state will lose $1,965,446 in income tax revenue due to the lost earnings of private-sector workers no longer employed due to the minimum wage hike.[11] Thus, the net increase in individual income tax revenue is $4,078,088.

Businesses have three options to respond to the higher labor costs of a higher minimum wage. They can reduce their profits, raise prices, or lay off workers. Based on the 2010-2011 ORG CPS data, the minimum wage increase will raise private-sector labor costs by $192,620,900 if employment levels are not reduced. However, labor costs will be lowered by $55,240,790 due to the reduction in employment. Thus, labor costs will, on net, rise by $137,380,110. These increased labor costs may be either passed on to consumers through higher prices or reduced profits or more likely some combination of higher prices and reduced profits. Assuming that businesses absorbed all of the higher costs through reduced profits, the corporate income tax revenue would fall by the Missouri corporate income tax of 6.25% times the rise in labor costs of $137,380,110 * 1.0765 (to account for employer-paid Social Security and Medicare taxes) or $9,243,106.[12] Alternatively, if half of the higher labor costs were passed on to consumers, then corporate income tax revenue would fall by $4,621,553.

[11] The probability of job loss was calculated in the same manner as in the prior section.
[12] The corporate income tax for Missouri is available at: http://dor.mo.gov/business/corporate/

E. Impact on State and Local Sales Tax Revenue

To calculate the impact on state and local sales tax revenue the following approach was undertaken.[13] First, the total increase in worker earnings, adjusted for employment reductions, was calculated using the 2010-2011 ORG CPS. This figure was $152,246,540. Second, the increase in Missouri taxable sales was calculated as 25% of the earnings increase or $38,061,635. Third, the increase in sales tax revenue was calculated by multiplying the taxable sales change times the average state and local rate of 7.67% or $2,919,327.[14]

The higher minimum wage may decrease sales tax revenue to the extent that it reduces business profits, which will lower spending by business owners.

VI. Summary and Conclusions

I was asked by counsel to evaluate the fiscal impact of proposed statutory initiative petitions 2012-084 and 2012-085.

The results of my analysis indicate:

(1) labor costs to state and local government entities, based on state auditor fiscal notes, will rise by more than $1,352,182. A more inclusive estimate indicates that state and local government labor costs will increase by $16,003,712;

[13] The same general approach is used in the State Auditor's fiscal notes for the initiatives.
[14] The average rate comes from http://taxfoundation.org/news/show/27023.html

(2) unemployment benefit costs will rise by $4,397,510 during the first year of the minimum wage increase;

(3) individual income tax revenue will rise by at most $4,078,088;

(4) the loss in corporate income tax revenue could be as high as $9,243,105;

(5) state and local sales tax revenue will rise by at most $2,919,327;

(6) during the first year: state and local governments will incur increased costs of $20,401,222; the change in state and local government revenue will range from -$2,245,690 to +$6,997,415; and the net state and local government fiscal impact will range from -$22,646,912 to -$13,403,807.

FISCAL ANALYSIS
OF
PROPOSED STATUTORY INITIATIVE PETITIONS 2012-084 AND 2012-085

Ph.D., Economics, The Pennsylvania State University.
B.S., Economics, The Pennsylvania State University.

Current Positions

E.M. Stevens Professor of Economics, Trinity University, 2009-
Research Fellow, Institute for the Study of Labor (IZA), Bonn, 2004-.

Previous Positions

Rod and Hope Brim Eminent Scholar in Economics, FSU 2004-2009.
Director, Pepper Institute on Aging and Public Policy, FSU, 2003-2009.
Abba P. Lerner Professor of Economics, FSU, 2000-2009.
Professor, Department of Economics, Florida State University, 1996-2009.
Director of Research, Pepper Institute on Aging and Public Policy, FSU, 1995-2000.
Associate Professor, Department of Economics, Florida State University, 1993-1996.
Research Associate, Pepper Institute on Aging and Public Policy, FSU, 1993-2001, 2003-2009.
Visiting Associate Professor, Department of Economics, Florida State University, 1992-1993.
Research Affiliate, Pepper Institute on Aging and Public Policy, FSU, 1992-1993, 2001-2003.
Associate Professor, Department of Economics, Miami University, 1991-1993.
Assistant Professor, Department of Economics, Miami University, 1987-1991.

Research Areas

Labor Economics, Labor Market Aspects of Pensions, Labor Unions, Racial and Gender Differences in the Labor Market, Minimum Wage, Deregulation.

Teaching Areas

Principles of Microeconomics and Macroeconomics, Intermediate Microeconomics, Money and Banking, Econometrics (undergraduate and graduate), Labor Economics and Labor Relations (undergraduate and graduate).

Presented "Unions and Pension Performance: The Role of Pension Design," at Southern Economics Association meetings, November 2009.

Panel member, "Recent Federal Reserve Policy: An Evaluation" at Southern Economics Association meetings, November 2009.

Discussant, "Topics in Health Economics," at Southern Economics Association meetings, November 2009.

Discussant, "Teacher Pay, Principals, and Schooling," at Southern Economics Association meetings, November 2009.

Presented "Is Bigger Still Better?: The Decline of the Wage Premium at Large Firms," at Western Economic Association meetings, July 2009.

Presented "Is Bigger Still Better?: The Decline of the Wage Premium at Large Firms," at Eastern Economic Association meetings, February 2009.

Panel Discussant at the Southern Economic Association meetings, November 2008.

Presented "Is Bigger Still Better?: The Decline of the Wage Premium at Large Firms," at Southern Economic Association meetings, November 2008.

Presented "The Growth of Participant Direction in Defined Contribution Pensions," at Western Economic Association meetings, July 2008.

Chair "Pensions and Retirement" Session at Southern Economic Association meetings, November 2007.

Presented "The Growth of Participant Direction in Defined Contribution Pensions," at Southern Economic Association meetings, November 2007.

Presented, "Participant Direction in Defined Contribution Pension Plans," at Southern Economic Association meetings, November 2006.

Panel Discussant, Southern Economic Association meetings, November 2005.

Presented, "Do Pensions Impede Phased Retirement?" at the Southern Economic Association meetings, November 2004.

Presented, "When Will the Gender Gap in Retirement Income Narrow?" at the Southern Economic Association meetings, November 2003.

Presented, "How Will the Growth of DC and 401(k) Plans Affect Pension Income?" at the Southern Economic Association meetings, November 2002.

Presented, "Racial Composition, Wages, and Quality Sorting," at the Southern Economic Association meetings, November 1999.

Presented, "Racial and Ethnic Differences in Pension Coverage and Benefit Levels," at the Southern Economic Association meetings, November 1998.

Presented, "Factors Influencing Participation and Contribution Levels in 401(k) Plans," at the Western Economics Association meetings, July 1998.

Presented, "Aging at Work: Employment Determination, Firm Strategies, and Public Policy in the United States," at the Western Economic Association meetings, July 1994.

Presented, "Why Did Male Pension Coverage Decline in the 1980s?" at the Western Economic Association meetings, July 1992.

Presented "Plant Size and the Decline of Unionism," at the Southern Economic Association meetings, 1989, with William Even.

Panel Discussant, Southern Economic Association meetings, November 1989.

Presented "The Labor Force Participation and Earnings Profiles of Married Female Immigrants," at the Southern Economic Association meetings, November 1988.

Presented "Pensions, Screening, and the Gender Wage Gap," at the Southern Economic Association meetings, November 1988.

Session Chair and Panel Discussant at the Southern Economic Association meetings, November 1988.

Participation in Invited Seminars, Conferences, and other Presentations

Presented, "Teaching Macroeconomics During Troubled Times," at Creative Ideas for Your Basic Economics Course Conference at Florida State University, February 2012.

Presented, "Participant Direction in Defined Contribution Pension Plans," at Pennsylvania State University, April 2010.

Presented, "The Parallels Between the Japanese Economic Crisis of the 1990s and the US Today" at Creative Ideas for Your Basic Economics Course Conference at Florida State University, February 2010.

Chair "Minimum Wage & EITC" Session at Society of Labor Economists meetings, May 2009.

Presented "Participant Direction in Defined Contribution Plans," at Lehigh University, April 2009.

Presented "Is Bigger Still Better?: The Decline of the Wage Premium at Large Firms," at Association of Private Enterprise Education meetings, April 2009.

Presented "The Growth of Participant Direction in Defined Contribution Pensions," at Trinity University, October 2008.

Presented "The Growth of Participant Direction in Defined Contribution Pensions," at Georgia State University, April 2008.

Presented "The Growth of Participant Direction in Defined Contribution Pensions," at Association of Private Enterprise Education meetings, April 2008.
Presented, "Improving Pension Coverage at Small Firms," at Hudson Institute, May 2006.

Presented, "Participant Direction in Defined Contribution Plans," at Society of Labor Economics meetings, May 2006.

Presented, "Participant Direction in Defined Contribution Plans," at Association of Private Enterprise Education meetings, April 2006.

Presented, "Participant Direction in Defined Contribution Plans," at University of Wisconsin-Milwaukee, April 2006.

Invited Panel Participant for Pepper Foundation and Center Symposium on pension reform, Washington, DC, February 2006.

Presented, "The Risk and Return of Pension Investments in Employer Stock," at West Virginia University, April 2005.

Presented, "The Risk and Return of Pension Investments in Employer Stock," at the University of Kentucky, November 2004.

Presented, "The Causes and Consequences of Company Stock Holdings in Pension Funds," at the Federal Reserve Bank of Atlanta, April 2004.

Presented, "The Causes and Consequences of Company Stock Holdings in Pension Funds," at the University of Oklahoma, February 2004.

Presented, "Tracking Union and Nonunion Wages in the U.S.: Can the Evidence be Reconciled?" at the Middlebury Annual Conference on Economic Issues, April 2002.

Presented, "How Will the Growth of DC and 401(k) Plans Affect Pension Income?" at the Miami University Center for Pension and Retirement Research Conference, June 2001.

Presented, "Benefits and Worker Productivity," Benefits for the Workplace of Tomorrow Conference, Wharton School, University of Pennsylvania, May 2001.

Participant, Innovations in Managing the Financial Risks of Retirement Conference, Wharton School, University of Pennsylvania, May 2000.

Presented "Using Hi-Tech in Large Lectures," at Association of Private Enterprise Education meetings, April 2000.

Presented "Employee Participation in 401(k) Plans," at University of Wisconsin-Milwaukee, October 1999.

Presented "Gender, Race, and Ethnicity in the Labor Market," as part of the Smith Chair course in Labor Economics at Brigham Young University, September 1999.

Presented, "The Decline in Pension Coverage Among Less Educated Workers," at the Florida State University Economics Department Seminar Series, 1996.

Presented, "Children's Effects on Women's Labor Market Attachment and Earnings" at the Conference on the Changes in Working Time in Canada and the United States, Canadian Employment Research Forum, 1996.

Presented, "Earnings, Rents, and Competition in the Airline Labor Market" at the Ohio State University Economics Department Seminar Series, 1996.

Presented, "Earnings, Rents, and Competition in the Airline Labor Market" at the Florida State University Economics Department Seminar Series, 1995.

Presented, "Employer Size and Labor Turnover: The Role of Pensions," at Syracuse University, 1995.

Presented, "Earnings, Rents, and Competition in the Airline Labor Market" while visiting scholar at the Federal Reserve Bank of Cleveland, 1995.

Presented, "Trends in Individual and Household Pension Coverage," at the Miami University Center for Pension and Retirement Research Conference, 1994.

Presented, "Racial Composition, Quality Sorting, and the Black-White Wage Gap" at the University of Wisconsin, Institute for Research on Poverty, Small Grants Workshop, 1993, with Barry Hirsch.

Presented, "Why Did Male Pension Coverage Decline in the 1980s?" at the Florida State University Economics Department Seminar Series, 1992.

Participant at National Bureau of Economic Research (NBER) Labor Studies meetings of the Summer Institute, 1992.

Presented, "Why Did Male Pension Coverage Decline in the 1980s?" at the Miami University Conference on Current Pension Policy Issues, 1992.

Organizer and participant at conference on "Contemporary Issues in Pension Economics," hosted by the Center for Pension and Retirement Research, Miami University, 1990.

Presented "The Effect of International Competition on Union and Nonunion Wages," at the University of Cincinnati Seminar Series, 1987.

Fiscal Note Summary

State and local governments estimate no direct costs or savings from the proposal, but operating costs could increase by an unknown annual amount that could be significant. State and local government tax revenue could change by an unknown annual amount ranging from a $7.5 million decrease to a $261 million increase depending on business decisions.

Jefferson City, MO 65101

RE: Petition approval request from Richard Von Glahn regarding a proposed statutory amendment to Chapter 290, Version 16 (2018-211)

Dear Auditor Galloway:

Enclosed please find an initiative petition sample sheet for a proposal to amend the Revised Statutes of Missouri filed by Richard Von Glahn on April 3, 2017.

We are referring the enclosed petition sample sheet to you for the purposes of preparing a fiscal note and fiscal note summary as required by Section 116.332, RSMo. Section 116.175.2, RSMo requires the state auditor to forward the fiscal note and fiscal note summary to the attorney general within twenty days of receipt of the petition sample sheet.

Thank you for your immediate consideration of this request.

Sincerely,

John R. Ashcroft

Address of Notary (Street, City, State & Zip Code)

Be it enacted by the people of the state of Missouri:

Section 290.502 of the Revised Statutes of Missouri is amended and a new section to be known as section 290.529 is enacted to read as follows:

290.502. 1. Except as may be otherwise provided pursuant to sections 290.500 to 290.530, effective January 1, 2007, every employer shall pay to each employee wages at the rate of $6.50 per hour, or wages at the same rate or rates set under the provisions of federal law as the prevailing federal minimum wage applicable to those covered jobs in interstate commerce, whichever rate per hour is higher.

2. The minimum wage shall be increased or decreased on January 1, 2008, and on January 1 of successive years, by the increase or decrease in the cost of living. On September 30, 2007, and on each September 30 of each successive year, the director shall measure the increase or decrease in the cost of living by the percentage increase or decrease as of the preceding July over the level as of July of the immediately preceding year of the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) or successor index as published by the U.S. Department of Labor or its successor agency, with the amount of the minimum wage increase or decrease rounded to the nearest five cents.

3. Except as may be otherwise provided pursuant to sections 290.500 to 290.530, and notwithstanding subsection (1) of this section, effective January 1, 2019, every employer shall pay to each employee wages at the rate of not less than $8.50 per hour, or wages at the same rate or rates set under the provisions of federal law as the prevailing federal minimum wage applicable to those covered jobs in interstate commerce, whichever rate per hour is higher. Thereafter, the minimum wage established by this subsection shall be increased each year by $.75 per hour, effective January 1 of each of the next six years, until it reaches $13.00 per hour, effective January 1, 2025. Thereafter, the minimum wage established by this subsection shall be increased or decreased on January 1, 2026, and on January 1 of successive years, per the method set forth in subsection (2) of this section. If at any time the federal minimum wage rate is above or is thereafter increased above the minimum wage then in effect under this subsection, the minimum wage required by this subsection shall continue to be increased pursuant to this subsection (3), but the higher federal rate shall immediately become the minimum wage required by this subsection and shall be increased or decreased per the method set forth in subsection (2) for so long as it remains higher than the state minimum wage required and increased pursuant to this subsection.

4. For purposes of this section, the term "public employer" means an employer that is the state or a political subdivision of the state, including a department, agency, officer, bureau, division, board, commission, or instrumentality of the state, or a city, county, town, village, school district, or other political subdivision of the state. Subsection (3) of this section shall not apply to a public employer with respect to its employees. Any public employer that is subject to subsections (1) and (2) of this section shall continue to be subject to those subsections.

290.529. Except in the circumstances set forth in section 290.523, all the provisions of sections 290.500 to 290.530 are severable. If any provision, including any section, subsection, subdivision, paragraph, sentence, or clause, of sections 290.500 to 290.530, or the application thereof to any person or circumstance, is found by a court of competent jurisdiction to be invalid, unconstitutional, or unconstitutionally enacted, such decision shall not affect other provisions or applications of sections 290.500 to 290.530 that can be given effect without the invalid, unconstitutional, or unconstitutionally enacted provision or application.

MISSOURI STATE AUDITOR'S OFFICE
FISCAL NOTE (18-211)

Subject

Initiative petition from Richard Von Glahn regarding a proposed amendment to Chapter 290 of the Revised Statutes of Missouri. (Received April 4, 2017)

Date

April 24, 2017

Description

This proposal would amend Chapter 290 of the Revised Statutes of Missouri.

The amendment is to be voted on in November 2018.

Public comments and other input

The State Auditor's office requested input from the **Attorney General's office,** the **Department of Agriculture,** the **Department of Economic Development,** the **Department of Elementary and Secondary Education,** the **Department of Higher Education,** the **Department of Health and Senior Services,** the **Department of Insurance, Financial Institutions and Professional Registration,** the **Department of Mental Health,** the **Department of Natural Resources,** the **Department of Corrections,** the **Department of Labor and Industrial Relations,** the **Department of Revenue,** the **Department of Public Safety,** the **Department of Social Services,** the **Governor's office,** the **Missouri House of Representatives,** the **Department of Conservation,** the **Department of Transportation,** the **Office of Administration,** the **Office of State Courts Administrator,** the **Missouri Senate,** the **Secretary of State's office,** the **Office of the State Public Defender,** the **State Treasurer's office, Adair County, Boone County, Callaway County, Cass County, Clay County, Cole County, Greene County, Jackson County, Jasper County, St. Charles County, St. Louis County, Taney County,** the **City of Cape Girardeau,** the **City of Columbia,** the **City of Jefferson,** the **City of Joplin,** the **City of Kansas City,** the **City of Kirksville,** the **City of Mexico,** the **City of Raymore,** the **City of St. Joseph,** the **City of St. Louis,** the **City of Springfield,** the **City of Union,** the **City of Wentzville,** the **City of West Plains, Cape Girardeau 63 School District, Hannibal 60 School District, State Technical College of Missouri, Metropolitan Community College, University of Missouri, St. Louis Community College, University of Central Missouri, Harris-Stowe State University, Lincoln University, Missouri State University, Missouri Southern State University, Missouri Western State University, Northwest Missouri State University, Southeast Missouri State University, Truman State University, Kansas City Board of Police Commissioners, The Metropolitan Police Department - City of St. Louis,** the **St. Louis County Board of Elections,** the **Board of Election**

Commissioners City of St. Louis, the **Kansas City Board of Election Commissioners,** the **Platte County Board of Elections,** the **Jackson County Election Board,** and the **Clay County Board of Election Commissioners**.

Lara Granich and **Missouri Jobs with Justice Voter Action** provided information as proponents of the proposal to the State Auditor's office.

Robert Bonney, Chief Executive Officer of the Missouri Restaurant Association provided information as an opponent of the proposal to the State Auditor's office.

Assumptions

Officials from the **Attorney General's office** indicated they expect that, to the extent that the enactment of this proposal would result in increased litigation, they can absorb the costs associated with that increased litigation using existing resources. However, if the enactment of this proposal were to result in substantial additional litigation, they may request additional appropriations. They do not expect that the enactment of this proposal would result in any other increased costs to their office.

Officials from the **Department of Agriculture** indicated there is no fiscal impact to their department for this initiative petition.

Officials from the **Department of Economic Development** indicated no impact to their department.

Officials from the **Department of Higher Education** indicated this initiative petition would not have a fiscal impact on their department since public employers are exempt from the new provisions proposed.

Officials from the **Department of Health and Senior Services** indicated this proposal would have no direct fiscal impact on their department since government employees are exempt from its provisions. However, employees of certain entities that receive funding through the department's budget would be impacted, such as Medicaid Home and Community Based Services vendors/providers and Area Agencies on Aging.

Officials from the **Department of Insurance, Financial Institutions and Professional Registration** indicated this petition, if passed, will have no cost or savings to their department.

Officials from the **Department of Mental Health** indicated this proposal creates no direct obligations or requirements to their department that would result in a fiscal impact.

Officials from the **Department of Natural Resources** indicated their department defers to the Office of Administration to determine the fiscal impact of this proposal.

Officials from the **Department of Corrections** indicated they defer to the Office of Administration.

Officials from the **Department of Labor and Industrial Relations** indicated no fiscal impact on their department.

Officials from the **Department of Revenue** indicated this petition will have no fiscal impact on their department. Their department defers to the Office of Administration for a state impact.

Officials from the **Department of Public Safety - Office of the Director** indicated they will defer to the response provided for this initiative petition by the Office of Administration - Human Resources.

Officials from the **Department of Social Services** indicated no fiscal impact on their department. They defer to the Office of Administration.

Officials from the **Governor's office** indicated there should be no added cost or savings to their office.

Officials from the **Missouri House of Representatives** indicated no fiscal impact to their office.

Officials from the **Department of Conservation** indicated that no adverse fiscal impact to their department would be expected as a result of this proposal.

Officials from the **Department of Transportation** indicated unknown fiscal impact.

Officials from the **Office of Administration** indicated the proposal amends Sections 290.502 RSMo, and adds Section 290.529, RSMo.

Section 290.502, RSMo, increases the minimum wage to $8.50 per hour, beginning January 1, 2019 and by another $0.75 per hour each year until it reaches $13.00 per hour beginning January 1, 2025. Thereafter, the minimum wage will be adjusted annually based on the increase/decrease in the cost of living.

The proposal exempts public employers from both requirements; therefore, there would be no cost to the State of Missouri.

Because no tax rates are affected, there is no direct impact on general and total state revenues. However, these proposals may have several indirect affects which could impact revenue collections by an unknown amount, including but not limited to:

- Increased wages for certain employees. According to the US BLS, in 2015, Missouri had 57,000 hourly employees earning wages at or below the federal minimum wage;[1]
- Increased consumption by those employees;
- Lower overall employment (if employers choose to hold costs steady);

[1] http://www.bls.gov/opub/reports/minimum-wage/2015/home.htm

- Lower business investment (if employers' payrolls increase);
- Increased prices as firms pass–through labor costs.

This proposal should not impact their office.

Officials from the **Office of State Courts Administrator** indicated there is no fiscal impact on the courts.

Officials from the **Missouri Senate** indicated no fiscal impact on their office.

Officials from the **Secretary of State's office** indicated their office is required to pay for publishing in local newspapers the full text of each statewide ballot measure as directed by Article XII, Section 2(b) of the Missouri Constitution and Section 116.230-116.290, RSMo. Their office is provided with core funding to handle a certain amount of normal activity resulting from each year's legislative session. Funding for this item is adjusted each year depending upon the election cycle with $1.3 million historically appropriated in odd numbered fiscal years and $100,000 appropriated in even numbered fiscal years to meet these requirements. Through FY (fiscal year) 2013, the appropriation had historically been an estimated appropriation because the final cost is dependent upon the number of ballot measures approved by the General Assembly and the initiative petitions certified for the ballot. In FY 2015, the General Assembly changed the appropriation so that it was no longer an estimated appropriation. In FY 2017 their office was appropriated $2.6 million to publish the full text of the measures. In FY 2017, at the August and November elections, there were 6 statewide Constitutional Amendments or ballot propositions that cost $2.4 million to publish (an average of $400,000 per issue). Their office will continue to assume, for the purposes of this fiscal note, that it should have the full appropriation authority it needs to meet the publishing requirements. Because these requirements are mandatory, they reserve the right to request funding to meet the cost of their publishing requirements if the Governor and the General Assembly again change the amount or continue to not designate it as an estimated appropriation.

Officials from the **Office of the State Public Defender** indicated this initiative petition will not have any significant impact on their office.

Officials from the **State Treasurer's office** indicated this proposal would have no impact on their office, as it would not apply to state employees.

Officials from **Greene County** indicated there are no estimated costs or savings to report from their county for this initiative petition.

Officials from the **City of Kansas City** indicated this petition may have a small negative fiscal impact on their city as a result of the increased hourly minimum wage being higher than the hourly rate paid some city employees.

Officials from the **City of Raymore** indicated no fiscal impact.

Officials from **University of Missouri** indicated they are not able to estimate any significant financial impact on their university.

Officials from **University of Central Missouri** indicated they estimate no fiscal impact since they are excluded under the public employer definition in section 4.

Officials from the **Missouri State University** indicated no fiscal impact.

Officials from **Missouri Southern State University** indicated they do not anticipate any fiscal impact from this initiative petition.

Officials from **Missouri Western State University** indicated the wording is unclear as to whether Colleges/Universities are included in this petition. In assuming they are included, they calculate the following significant fiscal impact to their university. The proposal will have a severe negative impact on the university. A projected minimum wage increase in 2019 to $8.50 an hour would increase their payroll expenditure for 2019 by approximately $275,800.00. With a proposed increase of .75 per hour for six years, reaching $13.00 an hour by 2025 their payroll expenses would see an approximate increase of $2,039,200.00, proving to be detrimental to the university.

Officials from the **Kansas City Board of Election Commissioners** indicated no fiscal effect on their operations.

Officials from the **Platte County Board of Elections** indicated no fiscal impact.

Officials from the **Jackson County Election Board** indicated this petition does not have a fiscal impact on their office.

Lara Granich and **Missouri Jobs with Justice Voter Action** provided the following information as proponents of this initiative petition.

Version 28	2018 - 202	$12 by 2024 (Start at $8.25; .75/year)	Yes	Yes	100%	No
Version 29	2018 - 203	$13 by 2025 (Start at $8.50; .75/year)	Yes	Yes	60%	No
Version 30	2018 - 196	$12 by 2022 (Start at $9; $1/year)	Yes	Yes	100%	Yes
Version 31	2018 - 197	$12 by 2022 (Start at $9; $1/year)	Yes	Yes	60%	Yes
Version 32	2018 - 198	$13 by 2023 (Start at 9; $1/year)	Yes	Yes	100%	Yes

Version 33	2018 - 199	$13 by 2023 (Start at $9; $1/year)	Yes	Yes	60%	Yes

This letter is from Lara Granich and Missouri Jobs with Justice Voter Action, proponents of the above-referenced Minimum Wage Initiative Petitions. Pursuant to RSMo. Section 116.175, we write to submit the following fiscal impact information to assist your office in its analysis of the fiscal impact of the above-mentioned seven proposed Minimum Wage Initiative Petitions.

Our analysis estimates the impact of the proposed Minimum Wage Initiative Petitions on state and local sales and personal income tax revenue in Missouri. We follow the process that has been used in the past to estimate the impact of minimum initiative petitions on state and local sales and personal income tax revenue, with some refinements. We also address certain claims that have been made by opponents of similar initiative petitions in the past.

As these petitions exclude public workers from the proposed minimum wage increases, we do not include in our analysis an estimate of the impact on state and local payroll costs of the proposed Minimum Wage Initiative Petitions.

I. Estimate of Number of Workers Affected Statewide and the Impact on Their Wages

Table 1. Summary of the Number of Affected Workers and Aggregate Wage Increases for Missouri in the Final Year of Minimum Wage Implementation.

Proposal	Year of Peak Minimum Wage (MW)	Proposed Peak MW	Tipped MW in Peak MW Year	Workers Affected by MW increase	Aggregate Annual Wage Increase in Nominal Dollars
13,14,15[a]	2023	$ 12.00	$ 6.00	835,350	$4,358,798,129
16,17,18[a]	2024	$ 12.00	$ 6.00	819,652	$4,209,438,048
19,20,21[a]	2025	$ 13.00	$ 6.50	900,788	$5,309,336,662
22,23,24[a]	2022	$ 11.00	$ 5.50	738,515	$3,347,138,756
25	2021	$ 11.00	$ 5.50	761,164	$3,469,534,559
26	2022	$ 12.00	$ 6.00	852,284	$4,510,285,824
27	2023	$ 13.00	$ 6.50	949,801	$5,667,065,534
28	2024	$ 12.00	$ 9.60	832,328	$4,288,614,460
29	2025	$ 13.00	$ 7.80	905,942	$5,332,471,496
30	2022	$ 12.00	$ 8.40	864,090	$4,558,317,729
31	2022	$ 12.00	$ 6.84	855,887	$4,523,341,931

32	2023	$ 13.00	$ 9.75	948,421	$5,745,051,956
33	2023	$ 13.00	$ 7.54	942,566	$5,685,951,766

Notes: Author's Analysis of American Community Survey (ACS) Data from 2014.
(a) Since these proposals only vary on non-economic factors, their economic and fiscal impacts are treated as equal for the purposes of this report.

Across the proposals analyzed, the total aggregate wage increase for workers in Missouri ranges from a low of $3.347 billion (Proposals 22-24) to a high of $5.745 billion under Proposal 32. While some proposals have the same final impact numbers, they have different impacts in the initial years (not listed) based on the relative pace of increases in earlier years. A full, year-by-year impact analysis is presented in Appendix Tables A1 through A13 below.

The wage impact of an increase in the minimum wage for the state of Missouri is calculated using the following procedure. The American Community Survey (ACS) Public Use Micro Sample for the most recent year available (2014) for the state of Missouri was downloaded from the US Census Bureau. The American Community Survey was chosen over the Current Population survey because the ACS has a significantly larger sample. We followed the method of Perry, Thomason, and Bernhardt (2016) for calculating an hourly wage rate from the ACS based on observed total annual wage income, typical hours worked each week and weeks worked per year. Since ACS income figures are clustered around whole-numbers, we smoothed the wage distribution by randomly adding or subtracting $0.25 from each wage figure.

Wage adjustments were made only for those individuals earning less than the proposed minimum wage, or proposed tipped minimum wage. We did not make additional adjustments for the "ripple effect" of minimum wage increases on workers earning slightly above the new threshold. Recent evidence suggests that workers earning up to 15 percent above of the minimum wage also receive small increases in response to a minimum wage increase. (See Wicks-Lim (2006) and Dube, Giuliano and Leonard (2015).) Thus, the estimated impacts listed above are likely to be smaller than the actual impact of increasing the minimum wage to the proposed level.

The proposed minimum wage increases exclude public employees. However, it was not practicable to exclude public employees from these calculations because the ACS does not have a published variable that allows for identification of public employees. Nonetheless, this inclusion of public employees should have only a minimal impact on our results, since their numbers are small and most already earn more than the proposed minimum wage increases.[1]

All wages from the 2014 survey were adjusted upward to account for inflation between the time of the survey and the time of measurement of the impact. Actual rates of inflation were used to adjust wages up to 2016. For all subsequent years between 2017 and 2028, baseline wages were adjusted using the projected annual average rate of change in the Consumer Price Index for Urban Workers (CPI-U) for the Midwest region. The 2015 and 2016 Missouri Minimum wage of $7.65 was adjusted by the same factor prior to measuring the impact of a change to the proposed minimum wage in 2019.

After these adjustments, the resulting hourly wage of all employees was compared to the proposed minimum wage. A total of twenty-one proposals were analyzed. For each proposal, we constructed a baseline wage scenario that used only basic wage changes from expected inflation rates to predict each ACS respondent's hourly wage rate in each year

[1] For Missouri's state employees, this can be validated by viewing the earnings of all state employees at: http://mapyourtaxes.mo.gov/MAP/Employees/. In larger counties and cities most all public employees already earn more than the highest proposed minimum wage. Smaller counties and towns may have some public employees who earn less than the highest proposed minimum.

between 2019 and 2028. We then constructed a counterfactual, or "proposed" wage distribution for each worker under all twenty-one minimum wage proposed scenarios. Since the minimum wage proposals offer nine different paths for raising the minimum wage for all non-tipped private sector workers, and different wage paths for tipped workers, we create separate minimum wage changes for tipped and non-tipped workers. Specifically, we used information on a worker's occupation and observed wage levels to separately identify tipped workers and assign them the proposed tipped minimum wage in each year, rather than the higher non-tipped minimum wage.[2]

If the proposed minimum wage was less than the inflation-adjusted hourly earnings of an employee, then no impact was calculated. If the proposed minimum wage was more than the hourly earnings for an employee, then the difference between the inflation-adjusted hourly earnings (i.e. baseline) and the proposed minimum wage was calculated. That difference was multiplied by the number of hours the employee worked in the year to calculate the annual impact for that employee. The result was then multiplied by a weighing factor for that employee in the population. The total impact for the state of Missouri was then summed across all affected workers to generate a total estimated increase in wage income in the state.

We do not include an estimate of job losses due to minimum wage changes. Existing research is clear that past minimum wage increases have had no measurable effect on aggregate employment levels. Larger minimum wage increases, such as those in Los Angeles, Seattle, and other jurisdictions, have not yet been studied to detect a clear disemployment effect. While it is possible that there may be some employment losses due to automation or other factors, this potential negative effect is likely offset by the positive potential job growth stemming from multiplier effects of the spending of minimum wage workers who receive substantial raises. There is substantial research to indicate that increases in the minimum wage have multiplier effects that increase the direct effects. For this reason and because of the likely increases in wages for individuals who earn above the proposed minimum wage rates, the impacts summarized in the table are considered conservative estimates relative to the total impact that would occur as a result of increasing the minimum wage to the proposed levels.

II. Economic Literature on the Impact of Minimum Wage Increases on Employment

Next, it is necessary to review the economic literature on the impact of minimum wage increases on employment. Opponents often claim that minimum wage increases may reduce employment in a state. If that is true, then those employment reductions would result in reductions in state income and sales tax revenue. However, review of the most credible recent empirical research on the minimum wage shows that increases in the minimum wage have had no discernible impact on employment. We thus conclude that it is not appropriate to project that the proposed initiative petitions would result in any detectable employment reduction, and resulting losses in income and sales tax revenue, or increases in unemployment-related costs to the state.

Economists have conducted hundreds of studies of the employment impact of the minimum wage. A recent meta-study – a formal statistical study of studies – by Doucouliagos and Stanley (2009) reviewed all the research conducted over the last three decades on the employment impact of minimum wage increases on teenagers in the United States. The researchers concluded that the minimum wage has little or no discernible effect on the employment prospects of low-wage workers. Their study followed a rigorous, peer-reviewed procedure and has the advantage of using a set of predetermined, objective criteria for weighing the validity of statistical findings across studies with different results.

[2] We defined tipped workers as those employed in occupations that typically receive a large share of income as tips. These occupations were 'Bartenders' (4040), 'Waiters and Waitresses', 'Food Servers, Non-restaurant' and 'Miscellaneous food preparation and serving related workers including dining room and cafeteria attendants and bartender helpers'.

(Source: Doucouliagos, Hristos and T. D. Stanley. 2009. "Publication Selection Bias in Minimum-Wage Research? A Meta-Regression Analysis." British Journal of Industrial Relations,vol. 47, no. 2, pp. 406-428.)

Recent theoretical and empirical research emphasizes several explanations for the consistently negligible employment impacts of moderate increases in the minimum wage. First, relative to total wage costs, minimum-wage increases are small. Second, employers and workers appear to respond to minimum-wage increases in many ways that reduce the direct cost to employers and substantially reduce or eliminate the need to cut employment.

Probably the most important economic response to a higher minimum wage is a reduction in turnover. At higher wages, employers fill vacancies faster and retain employees longer, boosting total employment and average productivity per worker while reducing direct and indirect training costs. Dube, Lester, and Reich (2012), for example, examined the effect of the minimum wage on labor turnover among teens and restaurant workers. They find "...striking evidence that separations, new hires, and turnover rates for teens and restaurant workers fall substantially following a minimum wage increase..." (p. 2). Their findings, using nationally representative data, are consistent with local case studies of the minimum wage and related "living wage" laws, including Dube, Naidu, and Reich's (2007) analysis of the San Francisco city-wide minimum wage; Fairris's (2005) study of local government contractors in Los Angeles; Howes (2005) on homecare workers in California; and Reich, Hall, and Jacobs (2005) on workers at the San Francisco airport.
(Sources: Dube, Arindrajit, T. William Lester, and Michael Reich. 2012. "Minimum Wage Shocks, Employment Flows and Labor Market Frictions." Berkeley, CA: Institute for Research on Labor and Employment. http://escholarship.org/uc/item/76p927ks; Dube, Arindrajit, Suresh Naidu, and Michael Reich. 2007. "The Economic Effects of a Citywide Minimum Wage." *Industrial and Labor Relations Review*, vol. 60, no. 4, pp. 522-543; Fairris, David. 2005. "The Impact of Living Wages on Employers: A Control Group Analysis of the Los Angeles Ordinance." *Industrial Relations*, vol. 44, no. 1, pp. 84-105; Howes, Candace. 2005. "Living Wages and the Retention of Home Care Workers in San Francisco." *Industrial Relations*, vol. 44, 5 no. 1, pp. 139-163; Reich, Michael, Peter Hall, and Ken Jacobs. 2005. "Living Wage Policies at the San Francisco Airport: Impacts on Workers and Businesses." *Industrial Relations*, vol. 44, no. 1, pp. 106-138.)

Employers also appear to respond to increases in the minimum wage by taking measures to boost productivity. Hirsch, Kaufman, and Zelenska's (2011) study of the impact of the federal minimum wage increase on 81 fast-food restaurants in Georgia and Alabama, for example, asked fast-food managers about the scope for efficiency improvements in response to the minimum-wage rise. About 90 percent of managers indicated that they planned to respond to the minimum wage increase with increased performance standards such as "requiring a better attendance and on-time record, faster and more proficient performance of job duties, taking on additional tasks, and faster termination of poor performers." (p. 27) Roughly the same share of managers said that they sought to "boost morale" by presenting the minimum wage increase as a "challenge to the store" and using this as a way "to energize employees to improve productivity." (pp. 28-29) Based on their interviews with store managers, the researchers concluded that a minimum wage increase may function as a "catalyst or shock that forces managers to step out of the daily routine and think about where cost savings can occur." (p. 29) (Source: Hirsch, Barry T., Bruce Kaufman, and Tetyana Zelenska, "Minimum Wage Channels of Adjustment." IZA Discussion Paper No. 6132. Germany: Institute for the Study of Labor. http://www2.gsu.edu/~ecobth/IZA_HKZ_MinWageCoA_dp6132.pdf)

A higher minimum wage may also motivate workers to work harder, independently of any actions by employers to increase productivity. According to "efficiency wage" theory, wages above the competitive-market rate may elicit greater work effort for several reasons. As Carl Shapiro and Joseph Stiglitz (1984) have argued, higher pay increases the cost to workers of losing their job, potentially inducing greater effort from workers in order to reduce their chances of

being fired. George Akerlof (1982), arguing from a more sociological point of view, has suggested that workers may see higher wages as a gift from employers, leading workers to reciprocate by working harder. (Sources: Shapiro, Carl and Joseph E. Stiglitz. 1984. "Equilibrium unemployment as a worker discipline device." *American Economic Review*, vol. 74, no. 3, pp. 433-444; Akerlof, George A. 1982. "Labor contracts as partial gift exchange." *Quarterly Journal of Economics*, vol. 97, no. 4, pp. 543-569.)

We therefore conclude that the proposed increase in the Missouri minimum wage would have no discernible impact on the employment levels of low-wage workers. Accordingly, we do not factor in reductions in employment, or any resulting decrease in sales tax or income tax. We also do not project any increased unemployment insurance costs – both because we do not project any resulting job losses, and, additionally, because unemployment insurance costs are paid for by employer premiums, and so are ultimately not a cost to the state.

For similar reasons, we do not believe that the proposed increase will have any significant adverse economic impact on small businesses or, by extension, on corporate income tax revenue. In fact, many small businesses already pay little if any corporate income tax.

III. State and Local Sales and Personal Income Tax Revenue Impact of Raising the Minimum Wage

Based on the wage impact figures calculated above, and the understanding that the minimum wage increases would be unlikely to result in offsetting job losses, we next calculate the impact of the projected wage increases on state and local sales and personal income tax revenue in Missouri. We project only the direct impact of the various minimum wage increase scenarios on such tax revenue. We do not attempt to project the additional impact through a GDP multiplier effect, or the potentially higher sales taxes generated if employers offset wage increases with higher prices (which would be taxable).

Personal Income Tax Revenue. In order to determine the projected increase in personal income tax revenues that would result directly from the increased wages, we had to develop assumptions about the effective income tax rates of the affected workers. We made the following assumptions with respect to the effective tax rate:

1. That 25% of affected workers can be claimed as a dependent on another party's Missouri income tax return and, as a result, would pay an effective tax rate of 6.0% on the increase in income;
2. That 50% of the affected workers would file as single taxpayers, would claim one deduction of $2,100, and would be entitled to a standard deduction of $5,800. This would result in an effective tax rate of 2.47%;
3. The remaining 25% would, we assumed, pay no additional Missouri income tax.

In light of these assumptions, the increased Missouri income tax revenue for each petition version can be calculated as follows: (total wage increase * 25% * 6.0%) + (total wage increase * 50% * 2.47%) + (total wage increase *25% * 0%).

Sales Tax Revenue. The state of Missouri imposes a 4.225% state sales tax on those items that are not exempt from the sales tax base. In addition, the average local sales tax rate is 2.95%. As a result, the average Missouri net sales tax rate is 7.175%. To estimate the share of income that is spent on goods and services that are subject to sales taxes, we used data from the 2015 Consumer Expenditure Survey (CES) for the US to estimate the share of income spent on categories that are subject to sales taxes. The CES summary tables list average spending per consumer across 20 different

categories (e.g. housing, transportation, food away from home) and we categorized each spending item as taxable or non-taxable and then calculated the share of spending that we taxable.[3] The resulting rate was 30.3 percent.

Based upon the above assumptions, and the total wage increase calculations for each version of the petition, we estimate that the increase in state income tax revenue resulting from the increased wages would be as follows:

Table 2. Summary of the Impact of Minimum Wage Increases on State and Local Sales and Income Taxes in Year of Full Minimum Wage Final Implementation.

Proposal	State Sales Tax (4.225%)	Local Sales Tax Revenue (2.95%)	Total Sales Tax Revenue Increase	Personal Income Tax Revenue	Total Sales and Personal Income Tax Revenue Increase
13,14,15[a]	$55,814,587	$38,971,132	$94,785,719	$119,213,129	$213,998,848

Note: Author's Analysis of American Community Survey (ACS) data from 2014 and fiscal impact assumptions described above. All dollars are in nominal figures. (a) Since these proposals only vary on non-economic factors, their economic and fiscal impacts are treated as equal for the purposes of this report.

As described in Table 2 above, the fiscal impact of the proposed minimum wage increases varies based on the ultimate level of the minimum wage and the degree of tipped minimum wage phase out. The estimates of the total fiscal benefit range from $164 million to $282 million annually. Appendix tables A1 through A13 provide a year-by-year summary of the fiscal benefits.

[3] Specifically, the categories we assumed to be subject to state and local sales taxes are: food, household furnishings and equipment, vehicle purchases, gasoline and motor oil, entertainment, and all other expenditures. We assumed that 50 percent of the spending on the category "apparel and services" was taxable.

We hope that this information is useful to your office as your prepare your analyses of the petitions.

Respectfully submitted,

Robert Bonney, Chief Executive Officer of the Missouri Restaurant Association provided the following information as an opponent of this initiative petition.

These corrections were subsequently provided to the submitted information

In the table on the bottom of page 7 and top of page 8, both averages for 2023 should be based on a 5 year phase-in. Accordingly, the figure on that table should state for 2023 ($12) Average Annual Unemployment Premiums Paid by State of $16,269,523.52.

The corresponding change on the table on page 12 would be to state, for 2023 ($12) Total Net Loss to State Government from Taxes and Unemployment Insurance of ($19,137,851.76).

Re: Initiative Petitions 2018-196 through 2018-216

Dear Mr. Halwes,

I write on behalf of Robert Bonney. Mr. Bonney is the Chief Executive Officer of the Missouri Restaurant Association. Please consider this letter and the accompanying studies as his fiscal impact statement as an opponent of Initiative Petitions 2018-196 through 2018-216 (the "Initiative Petitions"). If passed, any of these twenty-one initiatives would have a substantial negative impact on state and local governments, as well as Missouri small businesses. Those effects are both direct (as noted in Section 1) and secondary (as noted in Sections 2 through 5). The direct effects stem from higher labor and contracting costs that the state and its political subdivisions will incur, despite the Initiatives' effort to exclude government workers from the mandate.

The indirect effects will present a debate this Office has seen before. The proponents of the Initiative Petitions will once again rely on data sourced from political activist groups who claim increases in the minimum wage only serve to create new taxable income. The reality is that such groups approach this issue with political bias. Their analysis is one-sided because it completely ignores the fact that a wage increase does not "create" income from thin air; instead, it is an economic transfer from Missouri businesses to workers. Missouri businesses must pay the new wages "created" by the increases. Political activists' models fail to account, then, for two specific manifestations of the "debit" side of this transfer: reductions in employment, and the reduction in corporate income tax paid based upon business done in Missouri.

The failure to account for any employment effect at any proposed wage increase—even a drastic increase of the minimum wage to $13—is particularly puzzling, because Missouri's most populous areas border Illinois and Kansas. These states, respectively, have minimum wages of $8.25 and $7.25. Neither state adjusts the minimum wage for inflation. Likewise, the second effect—loss of corporate income tax revenues—is a mathematical certainty. Missouri businesses will be the source of the wage increase, which will lower their own taxable income. Assuming a one-to-one substitution of "created" wages for lost corporate income, the difference in the rates

at which these two types of income are taxed will result in a net decrease in state revenue. A dollar from increased wages is taxable by state government in Missouri at 6% or substantially less, whereas Missouri's corporate income tax rate is 6.25%.

On top of these two types of negative outcomes—lower employment and lower state tax revenues—there may be second-order effects to small businesses because they lack the access to capital to weather price fluctuations; they may not survive at all because they may not have the flexibility to simply cut employment, shifting their reliance to capital instead of labor resources, or suffering a decrease in production and revenue.

In short, much of the fiscal impact regarding the current crop of wage-related ballot measures is secondary: they cause transfers of wealth within (or out of) the state economy, and those transfers of wealth then create second-order effects for state and local governments via their collection of tax revenues and provision of welfare services for the unemployed or less-employed. Because these fiscal notes call for the Auditor operate in the area of secondary effects, it is critical that she treat both sides of the wealth transfer equally, and refrain from assessing only one half of the wage increase equation.

1. Direct Labor Cost Impact on State and Local Government Budgets

As noted to the State Auditor's Office previously by Dr. David Macpherson, a nationally prominent labor and economics expert, there are two ways to measure labor cost on state and local government budgets. First, one can use the information included in fiscal note responses from state and local government entities. It is important to note that these fiscal notes provide an incomplete and, therefore, too-low estimate of labor cost. Few state and local government entities respond to requests for a fiscal note response, and those that do respond often ignore important effects.

Second, data from the U.S. Census Bureau's Current Population Survey (CPS) can be used to calculate increased labor cost to state and local government entities in Missouri. To combat this time-honored analysis, and in a blatant attempt to manipulate the fiscal note process, the Initiative Petitions provide that they will raise the minimum wage for private workers, but not for workers employed by state or local governmental entities. No conceivable justification exists for solely raising the minimum wage on private businesses. Whatever the disparity between the value of total compensation at a private business and at a government employer, that disparity does not approach the wage adjustments at issue here, ranging from an inflation adjusted wage increase of 51.16% (($13-$8.60)/$8.60) in Initiative Petitions 2018-198 through 2018-201 to a wage increase of 30.17% (($11-$8.45)/$8.45) in Initiative Petitions 2018-213 through 2018-215.

Moreover, it is unreasonable to assume that on a sustained basis public employers, as defined in the Initiative Petitions, would be able to maintain dramatically lower wage levels than private businesses. Public employers would lose staff employable at higher rates in the private market, imposing substantial costs on government productivity. Using the method traditionally employed by labor economists and followed by the Auditor's office, one can calculate the annual

wage costs to state and local governmental entities, based on the annual wage cost for each state and local government worker in the ORG CPS, as detailed on page 6 of Dr. Macpherson's 2012 report, attached hereto as **Exhibit A**. Even if the auditor finds that a specific estimate of costs is not determinable, the auditor should note that state and local government "operating costs could increase by an unknown annual amount that could be significant," through the form of higher wage costs and higher contracting costs.

The proponents of the Initiative Petitions may argue that the Auditor should abandon any state and local cost estimates altogether. The proponents will argue that provisions they have inserted in the statute would mean that state and local government entities will not have to pay higher wages to their employees. Setting aside unjustifiable discrimination against private employers (and "public employees"), the provision is of uncertain legal effect and constitutionality. A "public employer," defined in the initiatives as "the state or a political subdivision of the state" still incurs substantial costs for wages of individuals that are "private employees," rather than "public employees." Cleaning services, food service, and other essential services often rely on state contracts with outside vendors. Sometimes, a contract rate may vary depending on the cost of labor. Even if the contract rate is fixed, it must be re-bid periodically, and that bidding process would take into account the new minimum wage. Plainly, the initiative would impose higher costs for state and local governments in contracting with any private entity and its employees. As a matter of law, it would be insufficient and unfair for the Auditor's fiscal note or summary to simply assume that these costs to state and local governmental entities do not exist.

2. Cost of Unemployment Benefits

a) The effect of inflation on Missouri's minimum wage

CPS–ORG data show that between 2007 and 2015, median nominal wages for adult (25–59 years old) workers in the U.S. grew by 1.68 percent a year. However, Missouri's minimum wage is currently adjusted using "the percentage increase or decrease as of the preceding July over the level as of July of the immediately preceding year of the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W)." Section 290.502, RSMo. Coincidentally (or perhaps not), the CPI-W, over the period from 2006 to 2016, also increased at an average rate of 1.68 percent a year.

Year	CPI-W	Observed inflation %
2006	199.2	
2007	203.7	0.022590361
2008	216.304	0.061875307
2009	210.526	-0.0267124

2010	213.898	0.016017024
2011	222.686	0.041085003
2012	225.568	0.01294199
2013	230.084	0.02002057
2014	234.525	0.019301646
2015	233.806	-0.00306577
2016	234.771	0.004127353

Using Missouri's current inflation-adjusted minimum wage rate and an assumed, constant 1.68 percent increase in the CPI-W, the minimum wage in Missouri will be as follows:

Year	Estimated Minimum Wage
2016	$7.65 (observed)
2017	$7.70 (observed)
2018	$7.85
2019	$8.00
2020	$8.15
2021	$8.30
2022	$8.45
2023	$8.60
2024	$8.75
2025	$8.90
2026	$9.05

b) Calculating job loss attributable to increased minimum wage

At least one outside economist, James Sherk, has already provided an estimate for job loss in Missouri based on a $15 minimum wage. Mr. Sherk calculated the effect of a $15 minimum wage implemented in 2021. Mr. Sherk's figures accounted for inflation by estimating the present value of $15.00 in 2021, rather than estimating an absolute figure for wage inflation in Missouri. Mr. Sherk calculated the present value of $15.00 in 2021 to be $13.57, per hour, based on wage inflation of 1.68 percent. Mr. Sherk evaluated the change from $7.65 per hour to $13.57 per hour (a 77.39% increase), exclusive of agricultural workers. Cumulatively, Mr. Sherk calculated this 77.39 percent increase in wages to reduce employment in the affected workforce by (0.7739*0.677) 52.39%.

Graves Garrett LLC

Mr. Sherk calculated that approximately 40.9% of Missouri's Wage and Salary Workers would be affected by such a $15 minimum wage. Mr. Sherk's calculations reveal that a $15 minimum wage in 2021 would be expected to reduce the number of full-time equivalent jobs in Missouri by approximately 218,000. Based on CPS–ORG data, these figures reveal an affected workforce of approximately 416,086 workers impacted by a $15 minimum wage increase in 2021.

However, in 2014, Dr. Macpherson found, using more conservative, national-level Congressional Budget Office data, that an increase to a $10.10 minimum wage, effective January 1, 2015, would eliminate about 15,700 jobs in Missouri. Dr. Macpherson analyzed the effect of a Missouri $10.10 minimum wage using a model suitable to a national analysis. This analysis predicted a loss of 15,700 Missouri jobs based on a wage increase from $7.50 in 2014 to $10.10 in 2015 (a 34.67% increase).

On the whole, the analysis by Mr. Sherk is more instructive here, since it is more recent, Missouri-specific, and anticipates larger wage changes contemplated by the Initiative Petitions. The most accurate way to determine the estimate of Workers Affected would be to analyze the CPS–ORG data. However, without such data readily available in the time constraints imposed by the fiscal note process, it is reasonable for estimation purposes to assume Mr. Sherk's figures are evenly distributed. Assuming that worker data follows an equal distribution, the Initiative Petitions would be expected to result in the following job losses:

Year of final prescribed wage increase	Wage without IP	Wage mandated by IP	Percentage increase	Percentage of affected workers who lose jobs (Percentage Increase x 0.677 Elasticity)	Estimate of Workers Affected	Estimate of Missouri Workers Unemployed by Initiative
2021	$8.30	$11.00	32.53%	22.02%	174,897	38,512
2022	$8.45	$11.00	30.18%	20.43%	162,262	33,150
2022	$8.45	$12.00	42.01%	28.44%	225,866	64,236
2023	$8.60	$12.00	39.53%	26.77%	212,532	56,895
2023	$8.60	$13.00	51.16%	34.64%	275,061	95,281
2024	$8.75	$12.00	37.14%	25.15%	199,683	50,220
2024	$8.75	$13.00	48.57%	32.88%	261,136	85,861
2025	$8.90	$13.00	46.07%	31.19%	247,695	77,256
2026	$9.05	$13.00	43.65%	29.55%	234,683	69,349

c) The best estimate for a price elasticity of demand for low-skilled labor is -0.677.

As noted by Mr. Sherk, starting wages of $15.00 per hour mean that full-time employee must create at least $38,700 a year in value for his or her employer (including wages, employer payroll taxes, and mandatory healthcare benefits). High minimum wages and mandatory benefit costs make it much harder for less-experienced and less-skilled workers to find jobs, particularly full-time work.

Recent labor economics scholarship has revealed that, accounting for publication bias, a state-specific elasticity of demand for less-skilled workers is, on average, approximately -0.677, though some estimates are even higher, around -1.0.[1] "[E]conomists have extensively studied how businesses respond to higher wages overall, not just minimum-wage increases. On average these studies find a 10 percent increase in labor costs causes firms to reduce employment of less-skilled workers by 6.8 percent in the long run."[2]

While these elasticity estimates are substantial in absolute terms, there is reason to believe that such estimates might still understate the impact of a Missouri state-specific effort to increase the minimum wage. This is so for several reasons. First, traditionally, labor economists view labor as a reasonably difficult input to substitute; however, Missouri businesses have readily available options. There are relatively few barriers to doing business in Missouri's border states, and businesses can easily relocate across a state line to take advantage of more favorable wage (and tax laws). Additionally, substantially raising the cost for Missouri labor, relative to labor sources in other states and other countries, is likely to force many manufacturing jobs in Missouri to disappear entirely. Automation is also a significant risk. The substitution of labor is becoming increasingly easy due to technology advancements and the "sharing" economy, where fewer individuals are "employees" covered by the minimum wage. Finally, a labor "price shock" may result in significant decreases in the demand for goods and services. People make behavioral changes to avoid higher costs, including eating out less often and generally decreasing consumption (or shifting their activities to consumption involving comparatively low amounts of labor) wherever possible.

[1] Sherk, James, "How $15-per-Hour Minimum Starting Wages Would Affect Each State," The Heritage Foundation, http://report.heritage.org/ib4601.

[2] "The coefficients on these estimates imply an elasticity of –0.677 for a study published in 2012 (the most recent year in their data) of long-run unconditional labor demand for low-skilled labor in the U.S., estimated using industry-level administrative panel data and a structural form model." "Estimates that do not account for publication bias tend to slow a long-run elasticity closer to –1.0. See, for example, George Borjas, Labor Economics, 6th ed. (Columbus, OH: McGraw-Hill, 2013), Chapter 4: 'The evidence also suggests that the estimates of the long-run labor demand elasticity cluster around –1, so the long-run labor demand curve is indeed more elastic than the short-run curve.' " Sherk, available at http://report.heritage.org/ib4601.

Graves Garrett LLC

d) Unemployment Benefit Costs

We derived an average unemployment payout by calculating the expected weekly unemployment benefit amount. Based on current data, the expected unemployment weekly benefit amount of a worker making $7.65 an hour, on a 40 hour workweek, is $159.12 per week, for 20 weeks.[3] The expected unemployment weekly benefit amount of a worker making $10.99 an hour is $228.59 per week. The expected unemployment weekly benefit amount of a worker making $11.99 an hour is $249.39 per week. The expected unemployment weekly benefit amount of a worker making $12.99 an hour is $270.19 per week. We assume that workers will seek unemployment insurance for the full twenty weeks authorized under Missouri law, because unemployment attributable to an increase in the minimum wage is structural. In this case, structural unemployment occurs because workers' job skills do not meet the established "price floor" of labor, rendering the worker's skills unmarketable. Assuming an even distribution of workers affected, the average unemployment benefit cost to the state for a worker is calculated as follows:

- For Initiative Petitions 2018-213 through 2018-216, [($159.12+$228.59)/2]*20 = $3,877.10
- For Initiative Petitions 2018-196, 2018-197, 2018-200, 2018-202, and 2018-204 through 209, [($159.12+$249.39)/2]*20 = $4,085.10
- For Initiative Petitions 2018-198, 2018-199, 2018-201, 2018-203, 2018-210 through 2018-212, [($159.12+$270.19)/2]*20 = $4,293.10

Consistent with Dr. Macpherson's 2012 report, it would be reasonable for the Auditor to assume that 35% of unemployed workers will receive unemployment benefits. Combining these numbers leads to the following estimates:

Year of final prescribed wage increase	Estimate of Missouri Workers Unemployed by Initiative	Estimated Unemployment Amount Per Worker	Estimated Total Unemployment Premiums Paid	Average Annual Unemployment Premiums Paid by State
2021 ($11)	38,512	3,877.10	$52,260,206.32	$17,420,068.77
2022 ($11)	33,150	3,877.10	$44,984,052.75	$11,246,013.19
2022 ($12)	64,236	4,085.10	$91,843,669.26	$22,960,917.32
2023 ($12)	56,895	4,085.10	$81,347,617.58	$20,336,904.39

[3] https://labor.mo.gov/DES/Claims/calculator. A 2015 law decreased the unemployment benefit period from 20 weeks to 13 weeks, but the Supreme Court of Missouri struck down the law in July 2016.

2023 ($13)	95,281	4,293.10	$143,167,801.39	$28,633,560.28
2024 ($12)	50,220	4,085.10	$71,803,802.70	$11,967,300.45
2024 ($13)	85,861	4,293.10	$129,013,450.69	$21,502,241.78
2025 ($13)	77,256	4,293.10	$116,083,706.76	$16,583,386.68
2026 ($13)	69,349	4,293.10	$104,202,767.17	$13,025,345.90

3. Impact on State Income Tax Revenue

The 2012 analysis prepared by Dr. Macpherson may also be used as a reference in calculating the effect of the initiative petitions on state income tax revenue. Here, again, it is reasonable to assume that our "affected workers" are evenly distributed, though precise CPS–ORG data would also provide a reliable estimate. Here, the increased income tax revenue is the additional income tax paid by workers whose wages increase. There is a loss of revenue, however, in the form of decreased income tax paid by workers whose wages decrease and businesses who absorb the increased cost of labor, rather than passing it along to customers.

For the purposes of these estimates, we assume that workers work 40 hours a week and 52 weeks per year:

Year of final prescribed wage increase	Estimate of Workers Affected	Estimate of Missouri Workers Unemployed by IP	Estimate of Missouri Workers with Increased Wages	Annual Increase in Wages Paid to Workers who get Wage Increase in Final Year	Annual Decrease in Wages Paid to Workers now Unemployed
2021 ($11)	174,897	38,512	136,385	$382,969,080.00	$108,141,696.00

2022 ($11)	162,262	33,150	129,112	$342,405,024.00	$87,913,800.00
2022 ($12)	225,866	64,236	161,630	$596,737,960.00	$237,159,312.00
2023 ($12)	212,532	56,895	155,637	$550,332,432.00	$201,180,720.00
2023 ($13)	275,061	95,281	179,780	$822,673,280.00	$436,005,856.00
2024 ($12)	199,683	50,220	149,463	$505,184,940.00	$169,743,600.00
2024 ($13)	261,136	85,861	175,275	$774,715,500.00	$379,505,620.00
2025 ($13)	247,695	77,256	170,439	$726,750,021.03	$329,419,584.00
2026 ($13)	234,683	69,349	165,334	$679,192,072.00	$284,885,692.00

These net wage increases will lead to corresponding increases in state income tax collections. Traditionally, it has been assumed that about 50% of affected workers will pay 6% income tax, while the other 50% of workers pay no state income tax. This assumption may be less accurate at the higher wage increases contemplated by the Initiative Petitions. Accordingly, figures are also displayed assuming that about 75% of affected workers will pay 6% income tax, while the other 25% of workers pay no state income tax.

Annual Net Increase in Wages Paid To Workers	Annual Income Tax Increase from Wage Increase (50% pay tax)	Annual Income Tax Increase from Wage Increase (75% pay tax)
$274,827,384.00	$8,244,821.52	$12,367,232.28
$254,491,224.00	$7,634,736.72	$11,452,105.08
$359,578,648.00	$10,787,359.44	$16,181,039.16
$349,151,712.00	$10,474,551.36	$15,711,827.04
$386,667,424.00	$11,600,022.72	$17,400,034.08
$335,441,340.00	$10,063,240.20	$15,094,860.30
$395,209,880.00	$11,856,296.40	$17,784,444.60
$397,330,437.03	$11,919,913.11	$17,879,869.67
$394,306,380.00	$11,829,191.40	$17,743,787.10

Graves Garrett LLC

Based on these figures, Missouri businesses must also decide whether to pass along any increase in wage costs (wages and mandatory payments).[4]

Year of final prescribed wage increase	Annual Cost to Business from Increased Wage	Annual Decreased Corporate Income Tax if cost is fully absorbed	Annual Decreased Corporate Income Tax if cost is 50% absorbed
2021 ($11)	$412,266,214.62	$25,766,638.41	$12,883,319.21
2022 ($11)	$368,599,008.34	$23,037,438.02	$11,518,719.01
2022 ($12)	$642,388,413.94	$40,149,275.87	$20,074,637.94
2023 ($12)	$592,432,863.05	$37,027,053.94	$18,513,526.97
2023 ($13)	$885,607,785.92	$55,350,486.62	$27,675,243.31
2024 ($12)	$543,831,587.91	$33,989,474.24	$16,994,737.12
2024 ($13)	$833,981,235.80	$52,123,827.23	$26,061,913.62
2025 ($13)	$782,346,397.64	$48,896,649.85	$24,448,324.93
2026 ($13)	$731,150,265.50	$45,696,891.59	$22,848,445.80

Assuming businesses absorb half of the cost of increased wages, and 75 percent of affected workers pay the new, higher taxes, the effect on state income tax collections is estimated to be:

Year of final prescribed wage increase	Annual Net Income Tax Revenue Loss
2021 ($11)	($516,086.93)
2022 ($11)	($66,613.93)
2022 ($12)	($3,893,598.78)
2023 ($12)	($2,801,699.93)
2023 ($13)	($10,275,209.23)
2024 ($12)	($1,899,876.82)
2024 ($13)	($8,277,469.02)
2025 ($13)	($6,568,455.26)
2026 ($13)	($5,104,658.70)

[4] A healthcare benefit cost estimate is not available based on the time limitations imposed by this fiscal note.

Graves Garrett LLC

4. Sales tax revenue gain or loss

Projecting any increase in sales tax revenue resulting from an increased minimum wage would require the auditor's office to conclude, based on data separate and apart from the sheer conjecture typically offered by political activist groups: (1) the net effect on consumer disposable income and (2) the percentage of a consumer's disposable income that is spent on goods subject to the sales tax, taking into consideration that the scope of Missouri's sales tax has been truncated by a voter-approved constitutional amendment from November 2016.

Typically, the Auditor's office multiplies the total increase in worker earnings (which should be adjusted for employment reductions) and multiplies the result by 25 percent, then multiplying that figure by the Missouri the population weighted combined average state and local sales tax in Missouri, 7.81%.[5] Based on this estimate, the population-weighted combined average local sales tax is 3.585%.

However, it would be deceptive to fail to account for sales tax losses from workers whose wages are eliminated or sales tax losses from reduced business profits (attributable to the higher wages paid), which will lower spending by business owners. The first figure is calculable by determining the total annual wages (adjusted for employment deductions) for all workers who lose jobs due to a minimum wage hike, multiplied by 25 percent. The second number is calculable by multiplying the total increase in worker earnings (multiplied by 1.0765 to account for Social Security and Medicare taxes) by approximately 15 percent.[6]

Year of final prescribed wage increase	Annual Net Increase in Wages Paid To Workers	New Wages Spent on Sales Tax Items	Annual Cost to Business from Increased Wage	Annual Business Income No Longer Included in Sales Tax Base (50% passed-through)
2021 ($11)	$274,827,384	$68,706,846	$412,266,214.62	($61,839,932)
2022 ($11)	$254,491,224	$63,622,806	$368,599,008.34	($55,289,851)
2022 ($12)	$359,578,648	$89,894,662	$642,388,413.94	($96,358,262)
2023 ($12)	$349,151,712	$87,287,928	$592,432,863.05	($88,864,929)

[5] http://taxfoundation.org/sites/taxfoundation.org/files/docs/LOST--2015.png.
[6] This estimate would also need to be adjusted to reflect certain employers' mandate under the Affordable Care Act to provide healthcare coverage and pay 60 percent of such coverage.

2023 ($13)	$386,667,424	$96,666,856	$885,607,785.92	($132,841,168)
2024 ($12)	$335,441,340	$83,860,335	$543,831,587.91	($81,574,738)
2024 ($13)	$395,209,880	$98,802,470	$833,981,235.75	($125,097,185)
2025 ($13)	$397,330,437	$99,332,609	$782,346,397.64	($117,351,960)
2026 ($13)	$394,306,380	$98,576,595	$731,150,265.51	($109,672,540)

Accordingly, the annual estimations of the effects on state and local revenue, and total state economic impact are as follows:

Year of final prescribed wage increase	Annual Net Income Tax Revenue Loss	Annual Net Effect on State Sales Tax	Total Annual Effect on State Tax Revenue	Total Net Loss to State Government from Taxes and Unemployment Insurance	Annual Net Effect on Local Sales Tax
2021 ($11)	($516,086.93)	$290,127.11	($225,959.82)	($17,646,028.59)	$246,178.86
2022 ($11)	($66,613.93)	$352,067.34	$285,453.41	($10,960,559.78)	$298,736.43
2022 ($12)	($3,893,598.78)	($273,087.10)	($4,166,685.88)	($27,127,603.19)	($231,720.06)
2023 ($12)	($2,801,699.93)	($66,628.31)	($2,868,328.24)	($23,205,232.64)	($56,535.50)
2023 ($13)	($10,275,209.23)	($1,528,364.68)	($11,803,573.91)	($40,437,134.18)	($1,296,849.08)
2024 ($12)	($1,899,876.82)	$96,566.47	($1,803,310.36)	($13,770,610.81)	$81,938.65
2024 ($13)	($8,277,469.02)	($1,110,951.72)	($9,388,420.74)	($30,890,662.52)	($942,665.55)
2025 ($13)	($6,136,139.31)	($761,317.55)	($6,897,456.87)	($23,480,843.55)	($645,993.71)
2026 ($13)	($5,104,658.70)	($468,803.67)	($5,573,462.37)	($18,598,808.26)	($397,789.62)

5. Damage to small business

Additionally, any proponent or opponent fiscal note submission is required, pursuant to Missouri law, to state the impact of the initiative on small businesses. According to analysis by the Employment Policies Institute, 40 percent of the minimum wage workforce is employed at businesses with fewer than 50 employees. [7] The impact on extra costs to small business may be more significant than even this 40% figure suggests. Small businesses are more easily shut down by input price increases than large businesses, which have greater access to capital to weather the

[7] https://www.epionline.org/oped/who-really-employs-minimum-wage-workers/

storm. Clearly, small businesses that do not shut down due to increases in the minimum wage will pay higher costs, estimated at about 40% of business' total increased costs, described above.

Conclusion

In conclusion, the State Auditor should attempt to quantify the increased cost to be borne by state and local government entities through increased contracting costs as a result of an increase to the minimum wage. This direct cost is outlined in Section 1.

Indirect costs are outlined in Sections 2 through 5, and show a net loss. Although such second-order effects more difficult to predict, a net loss is easily the most likely outcome. Significantly, this result is only obtainable if the Auditor reviews both the "credit" and "debit" sides of the transfer of wealth from businesses to workers. The Auditor should refrain from taking the proponents' likely invitation to consider and present only the "credit," side, and should attempt to provide a complete picture of all effects of a minimum wage increase, including the loss of revenue to state and local governments from individuals who lose employment. Only conveying (or quantifying) the potential for gain, without fairly conveying the likelihood of net loss, would be deceptive and unfair.

The State Auditor's previous 2018 fiscal notes are a good model. Each of the fiscal notes for the Initiative Petitions should follow the already-established format and state that:

> "[O]perating costs could increase by an unknown annual amount that could be significant. State and local government tax revenue could change by an unknown annual amount ranging from a $## million decrease to a $## million increase depending on business decisions."

Should you desire further detail or have any questions about this fiscal impact statement, please do not hesitate to contact me.

Sincerely,

Edward D. Greim

ABOUT THE MISSOURI RESTAURANT ASSOCIATION

With origins dating back to 1916, the Missouri Restaurant Association (MRA) is a statewide trade association representing over 1,500 member establishments. The association's membership is diverse, and includes full service, fast casual, and quick service restaurants, cafeterias, hotels, schools, institutions, contract feeders, and ancillary foodservice providers such as theme parks. The association has been successful in securing support from virtually every segment of the foodservice and hospitality industry.

MRA includes seven chapters as extensions of the parent organization, each with its own Officers, Board of Directors, and limited budget. The association is governed by a Board of Directors comprised of five Officers, 33 Directors, and each President of the seven affiliated chapters.

MRA is dedicated to serving the needs of the foodservice and hospitality industry, enhancing and improving its growth and development, assisting and educating its members in operating more effectively, improving the political and social environment in which the industry conducts business, for the benefit of its members, patrons, employees, and the well-being of the community.

David A. Macpherson is the E.M. Stevens Professor of Economics at Trinity University. He received undergraduate and doctoral degrees in economics from Pennsylvania State University.

Dr. Macpherson has published over 60 articles in leading economics and real estate journals including Review of Economics and Statistics, Industrial and Labor Relations Review, Journal of Labor Economics, Journal of Human Resources, and Journal of Real Estate Economics and Finance. His research has been funded by a variety of entities including the National Science Foundation, Florida Legislature, and the National Association of Realtors. He is co-author of the undergraduate labor economics text, Contemporary Labor Economics, as well as the principles of economics text, Economics: Private and Public Choice. He is included in Who's Who in Economics, Fourth Edition, which includes the 1,200 most frequently cited economists.

THE IMPACT OF A $10.10 MINIMUM WAGE ON JOBS AND TAXPAYER COSTS IN MISSOURI

June 2014

Economic Analysis by **Dr. David Macpherson**
Trinity University

Index

Executive Summary 4
Results 5
Technical Appendix 7

EXECUTIVE SUMMARY

Missouri's minimum wage of $7.50 is linked to rise in most years with the inflation rate. But some state legislators and labor unions would like to raise that figure even higher. For instance, a recent labor union-organized bus tour in the state promoted a $10.10 minimum wage in St. Louis.

Proponents have enthusiastically pointed to the benefits of the $10.10 policy. But there's been far less discussion of the costs involved with a $10.10-an-hour minimum wage—both the cost on employment, and the cost to taxpayers.

In this study, labor economist David Macpherson of Trinity University uses Census Bureau data to estimate the impact on Missouri's labor market and budget from raising the minimum wage to $10.10 an hour. He also provides separate results for the St. Louis metropolitan area.

Dr. Macpherson's employment estimates follow the methodology used by the nonpartisan Congressional Budget Office in its report earlier this year estimating the impact of a $10.10 minimum wage nationwide, which in turn relied on 60 different empirical studies to formulate its estimates.

Statewide, he finds that over 15,000 jobs would be lost at the $10.10 wage level—with 9,300 of those jobs being held by women. In the St. Louis metropolitan area, approximately 4,800 jobs would be lost from a $10.10 minimum wage.

The cost to taxpayers would be significant: There are approximately 40,000 state and local employees whose wages would be affected by the $10.10 increase in Missouri, for a combined cost to taxpayers of $87 million annually.

Raising wages is an admirable goal, but the evidence suggests that accomplishing this goal with a blunt wage mandate could do more harm than good.

RESULTS

The minimum wage is one of the most hotly-debated topics in the political world. Some legislators claim that a higher base wage will stimulate the economy; others claim that it will reduce jobs when affected employers can't offset the higher costs through higher prices.

Economists, who have studied the issue since the late 1940s, tend to take a skeptical view of minimum wage increases. Since the early 1990s, for instance, roughly 85 percent of the most credible research on the minimum wage points to job loss for less-skilled groups. The nonpartisan Congressional Budget Office (CBO), in an evaluation of President Obama's proposed $10.10 minimum wage increase, reviewed 60 different studies and concluded that the policy would eliminate 500,000 jobs if enacted.

The estimates that follow, of the employment impact of a higher minimum wage on Missouri's labor market, were performed by Dr. David Macpherson of Trinity University. Dr. Macpherson followed closely the methodology used by the CBO in its 2014 report. Dr. Macpherson also estimates the taxpayer costs of a higher minimum wage, as many state and local public employees will see their earnings increase when the minimum wage rises.

Dr. Macpherson's methodology is presented in detail in a technical appendix.

Estimated Employment Effects of a $10.10 Minimum Wage in Missouri

Statewide, Dr. Macpherson finds that increasing the minimum wage to $10.10 would eliminate over 15,000 jobs—approximately 60 percent of which are jobs held by women. The bulk of the job losses would be concentrated among individuals with a high school degree or less, and among people who work in the retail or leisure & hospitality industries.

City-Specific Minimum Wage Employment Impacts

The city of St. Louis has been the subject of a number of protests calling for a higher minimum wage. Dr. Macpherson analyzed the employment impact of a $10.10 minimum wage in the St. Louis metropolitan area, providing breakouts by gender and education where the data permits. He estimates that the wage hike would eliminate approximately 5,000 jobs—just over half of which would be jobs held by women.

Impact on St. Louis Metro Area of a $10.10 Minimum Wage

RESULTS CONTINUED

Missouri Taxpayer Costs of a $10.10 Minimum Wage

Dr. Macpherson estimates that approximately forty thousand state & local public employees would be affected by a minimum wage increase to $10.10 an hour. These additional wage costs translate to new costs for state and local taxpayers. Following the methodology described in detail in the technical appendix, Dr. Macpherson estimates both the straight wage cost of a $10.10 minimum wage, as well as the total compensation cost with Social Security, Medicare, workers compensation, and unemployment insurance included. Statewide, taxpayers would shoulder an additional $87 million in costs if the base wage was increased to $10.10 an hour and public employees were covered by the new wage.

Missouri Taxpayer Costs of a $10.10 Minimum Wage	
# of State & Local Workers	304,588
# Affected By $10.10 MW	40,103
Annual Wage Cost	$79,629,374
Annual Compensation Cost	$87,004,355

Note: Annual compensation costs include the cost of worker's compensation, FICA, and unemployment insurance benefits.

TECHNICAL APPENDIX

Estimating Employment Loss and the Cost to State and Local Government of an Increase in the Minimum Wage

Dr. David Macpherson
E.M. Stevens Professor of Economics
Trinity University

This paper describes how we estimate the employment loss and the cost to state and local governments of a proposed increase in the minimum wage effective on January 1, 2015.

Data and Sample

First, we use data from the Current Population Survey (CPS) Outgoing Rotation Groups (ORG) from January 2011 through December 2013. For each worker in the sample, we calculate their wage rate. We also adjust the wage rate to reflect a forecast of wages in 2015. This is done in two steps. First, based on legislation enacted as of April 2014, we estimate the minimum wage that would be in effect in January 2015 for each state and city that we consider. If a state or city has an indexed minimum wage, we increase the January 2014 state or city minimum wage by the Congressional Budget Office (CBO) inflation forecast for 2014 of 1.7%.

Since we use data from 2011 through 2013, we also follow the CBO approach for forecasting what the wage distribution would be in 2015. This is done in two steps. First, we adjust wages observed prior to 2013 to reflect 2013 minimum wage legislation. For example, if the minimum wage in a state was $7.25 in 2011 and grew to $8.00 by 2013, anyone who earned between $7.25 and $8.00 in 2011 would have their wage increased to $8.00. After wages are adjusted to 2013 levels, we assume that all wages grow by 2.9% in 2014. Using the resulting 2015 distribution of wages, we adjust for minimum wage legislation that would increase the minimum between 2013 and 2015. Anyone earning a wage between the 2013 and 2015 minimum wage is assigned a wage matching the 2015 minimum wage.

After generating the forecast 2015 distribution of wages reflecting wage growth and existing minimum wage legislation, we identify workers who would be affected by additional changes to the 2015 minimum wage as those with wages between the predicted minimum wage legislated for 2015 (or up to $.25 below it) and the proposed minimum.

To estimate the number of affected workers, we take two steps. First, for each state, we estimate the number of affected workers for 2013. Second, we adjust the weights in the 2011 and 2012 data so that the state-specific number of affected workers implied by the 2011 and 2012 data matches that for 2013. This adjustment is designed to correct for the changing economic climate as the economy recovers from the great recession and to generate estimates that are as close as possible to the most recent data (2013). After we adjust the 2011 and 2012 weights, we estimate the number of affected workers by summing their earnings weights and dividing the total by 36 (the number of months of data).

[1] Also, following CBO, anyone earning up to $.25 less than the 2011 minimum wage would have their wage increased by the amount that the minimum wage increased (i.e. a $7.00 wage would be increased to $7.75 in this example). This approach is used to adjust for the fact that many workers round their answers when asked about their wage.

TECHINCAL APPENDIX CONTINUED

Employment Loss

To estimate employment loss, for each affected worker we compute:

L = e *(Proposed Min Wage /Min Wage 2015 – 1)

where e is an assumed elasticity of employment with respect to changes in the minimum wage, Min Wage 2015 is the minimum wage currently legislated for 2015, and Proposed Min Wage is the minimum wage that is being proposed for 2015. Thus, for example, if a worker is projected to earn the federal minimum of $7.25 in 2015, the expected reduction in employment resulting from a $10.10 minimum wage in 2015 if e=.45 is .45*(10.10/7.25 – 1) = .18. That is, for every 100 workers currently earning the federal minimum, the expectation is that 18 would lose a job if the minimum wage elasticity is .45.

To estimate the aggregate employment loss in the economy, we use earnings weights to sum L across workers. We also follow the Congressional Budget Office (2014) and use an elasticity of 0.15 for non-teenagers and 0.45 for teenagers.

Cost to State and Local Government

We use the same data to estimate the cost to state and local government of a proposed minimum wage hike. We apply the same definition of affected workers described above and estimate the number of state and local government workers affected by a minimum wage hike. We do not, however, assume that there is any job loss for state and local workers as we do not have an appropriate elasticity estimate specific to state and local workers. To the extent that state or local governments reduce hours or employment in response tothe minimum wage hike, our estimate of the cost of the hike would be overstated.

To estimate the increase in annual payroll cost resulting from an increase in the minimum wage, we estimate the increase in annual cost for each worker as:

(Proposed Min Wage-Min Wage 2015)*weekly hours*52

We then multiply the increase in annual cost by the earnings weight for each worker and sum across workers. Since an increase in wages also requires increased employer contributions for Social Security, Medicare, workers' compensation and unemployment insurance, we apply an estimate of the payroll tax rate for these mandatory programs to calculate the additional cost for these programs.

For each state and city considered, we provide tables summarizing the number of affected workers, employment loss, and the distribution of employment loss by sex, education, race, age and industry. Given that we use three years of data, a rule of thumb for minimum sample size required to achieve a reasonably accurate estimate of the employment loss is to require at least 30,000 people be in the relevant category. For example, if there are fewer than 30,000 people projected to be in a particular industry category, the Bureau of Labor Statistics would not report the estimate due to a lack of reliability based on the variance of the estimate relative to its mean.

In addition to the estimate of employment loss, for each state or city considered, we estimate the number of state and local workers that would be affected by the minimum wage hike and the total annual cost to government in terms of wages and total compensation. As with the employment estimates, we advise caution in interpreting estimates that are based on fewer than 30,000 affected workers.

[3] Congressional Budget Office, "The Effects of a Minimum-Wage Increase on Employment and Family Income," February 2014.

[4] For workers paid by the hour the reported hourly wage was used. For workers who are not paid by the hour, we calculate the hourly wage by dividing usual weekly earnings by usual weekly hours. Overtime pay was calculated as time and one-half for hours above 40 hours for hourly workers.

[5] The assumed payroll tax for Medicare and Social Security is 7.65 percent. To estimate the payroll tax for workers' compensation and unemployment insurance, we use unpublished data from the 2010 Employer Cost of Employee Compensation database for state and local workers in the relevant region in 2010.

FISCAL ANALYSIS
OF
PROPOSED STATUTORY INITIATIVE PETITIONS 2012-084 AND 2012-085

Prepared for

Victor Allred versus Robin Carnahan and Thomas Schweich
Circuit Court of Cole County, Missouri

FISCAL ANALYSIS
OF
PROPOSED STATUTORY INITIATIVE PETITIONS 2012-084 AND 2012-085

I. Introduction

This report was undertaken at the request of counsel representing plaintiffs in the case of Victor Allred versus Robin Carnahan and Thomas Schweich. As part of the basis of the lawsuit, the plaintiffs allege that the fiscal note summaries for proposed statutory initiative petitions 2012-084 and 2012-085 are insufficient and unfair. I was asked by counsel to evaluate the fiscal impact of proposed statutory initiative petitions 2012-084 and 2012-085.

The results of my analysis indicate:

(1) labor costs to state and local government entities, based on state auditor fiscal notes, will rise by more than $1,352,182. A more inclusive estimate indicates that state and local government labor costs will increase by $16,003,712;

(2) unemployment benefit costs will rise by $4,397,510 during the first year of the minimum wage increase;

(3) individual income tax revenue will rise by at most $4,078,088;

(4) the loss in corporate income tax revenue could be as high as $9,243,105;

(5) state and local sales tax revenue will rise by at most $2,919,327;

(6) during the first year: state and local governments will incur increased costs of $20,401,222; the change in state and local government revenue will

range from -$2,245,690 to +$6,997,415; and the net state and local government fiscal impact will range from -$22,646,912 to -$13,403,807.

The report is organized as follows. My qualifications to prepare this report are contained in Section II. Section III describes the data and records I relied upon for this report. Section IV reviews the estimated fiscal impact of proposed statutory initiative petitions 2012-084 and 2012-085. A summary and my conclusions are provided in Section VI.

II. Qualifications

I am currently the E.M. Stevens Professor of Economics at Trinity University in San Antonio, Texas. Previously, I was employed by Florida State University as Director of the Pepper Institute on Aging and Public Policy and the Rod and Hope Brim Eminent Scholar in Economics. I have taught both undergraduate and graduate Econometrics (statistical analysis of economic data), and Labor Economics. I have published over 50 articles in peer-reviewed professional journals.

I am currently serving on the editorial board of the *Journal of Forensic Economics*, which is a peer-reviewed journal. I have also served as a reviewer or 'referee' for 24 peer-reviewed journals, including the *Journal of Human Resources, Journal of Labor Economics, Quarterly Journal of Economics,* and the *Review of Economics and Statistics*. Based upon these experiences, I am very familiar with the scholarly and professional research process and the concept of peer review.

I have prepared numerous analyses and reports that use statistical methods as applied to specific questions. I have been responsible for developing the techniques and approaches required for these analyses. I routinely use computers and statistical software packages to assist me in my analytical work. I have been qualified as an expert witness on statistical analysis of employment discrimination and economic damages in state courts in Florida and Georgia and Federal Courts, and I have given expert testimony. I have prepared analyses and offered testimony on behalf of both plaintiffs and defendants.

Details of my qualifications are reflected in my current resume and legal cases, attached as Appendix A to the report.

III. Data and Records

I reviewed the following materials in preparing this report.

- Plaintiff's Complaint
- Material cited in footnotes below.

IV. Fiscal Impact

A. Overview

The proposed statutory initiative petitions 2012-084 and 2012-085 contain many elements in common. Both initiatives would increase the Missouri minimum wage to $8.25 per hour, alter the exemption for retail and service firms, raise the cash wage of tipped workers from 50% to 60% of the minimum wage, and increase the statute of limitation from two to three year for underpayment claims.

The initiatives differ in their linkage to the federal minimum wage. Initiative petition 2012-084 requires that the state minimum wage be automatically increased to the

federal minimum wage if it is higher than the state minimum wage. Initiative petition 2012-085 does not have such a linkage. It only requires that workers be paid the higher of the state minimum wage or the federal minimum wage. The linkage to the federal minimum wage will cause the state minimum wage to be higher under initiative petition 2012-084 over time. This is because the state minimum wage, in contrast to the federal minimum wage, is adjusted for inflation as measured by the Consumer Price Index.

An increase in the minimum wage in Missouri will affect state and local government entities in two ways. First, it will directly increase the cost of labor to state and local government entities. This will occur due to the increase in wages of state and local government workers earning between the existing minimum wage of $7.25 and the new minimum wage of $8.25.[1] In addition, workers laid off due to the minimum wage increase can collect unemployment benefits. The state government will bear the cost of unemployment benefits of these workers for the first 20 weeks. Second, state and local government may gain increased revenue through higher income tax and sales taxes paid by workers affected by the minimum wage who remain employed. However, state and local government will suffer reduced tax revenue to the extent the higher wage cost lowers profits of businesses.

The following sections estimate the cost and revenue effects to state and local government entities of the proposed minimum wage increase.

[1] Information about the minimum wage in Missouri is available at http://www.labor.mo.gov/DLS/minimumwage/.

B. Direct Labor Cost Impact on State and Local Government Budgets

There are two possible ways to measure the direct labor cost on state and local government budgets. First, one can use the information included in the fiscal notes prepared by the State Auditor regarding the proposed initiatives. It is important to note that the fiscal notes provide an incomplete and thus too low estimate of the direct labor cost. The fiscal notes indicate that the Office of Administration's (OA) Division of Personnel reported that as of September 2011 there were 834 state workers who would be affected by an increase of the minimum wage to $8.25 and the "approximate annual cost" would be more than $540,000.

This OA estimate excludes seasonal workers such as State Fair employees, State Parks Employees, and tax season staff. The Division of Revenue noted its labor cost would rise by $40,000. The Division of Natural Resources stated they have over 500 workers who would be affected by the increase, but did not provide an estimate of the cost. The State Fair hired 745 workers that would be affected, but no cost estimate was provided.

Thus, the cost to state government, based on the fiscal notes, would be more than $580,000.

The fiscal notes also provide an incomplete and thus too low measure of the cost to local government and public educational institutions. Many cities and educational institutions did not respond to Office of Auditor's survey or provide an estimate of the cost of the higher minimum wage. The City of Columbia, City of Jefferson, City of

Joseph, Linn State Technical College, and Metropolitan Community College did provide such an estimate. The total cost to these five institutions is $772,182.

Based on the fiscal notes, the cost to state and local government entities of the increase in the minimum wage to $8.25 will be more than $1,352,182.

Second, data from the U.S. Census Bureau's Current Population Survey (CPS) can also be used to calculate the cost of the increased labor cost to state and local government entities in Missouri. Using the data from January 2010 to December 2011 Outgoing Rotation Group (ORG) CPS, I calculated that 17,089 state and local government workers would be affected by the minimum wage increase. I defined affected workers as those individuals earning between $7.00 and $8.24 per hour. Though the minimum wage was $7.25 per hour during this period, I also included those workers reporting earnings of $7.00 to $7.24 since some individuals may round their wage rate. I calculated the annual wage cost for each state and local government worker (i) in the ORG CPS as:

$$Annual\ Wage\ Cost_i = (\$8.25 - current\ wage_i) * weekly\ hours_i * 52.$$[2]

The average annual wage cost increase was $870. I summed the cost over each worker (i) to obtain the total wage cost to state and local government entities in Missouri of $14,866,430.

The increased wage cost is not the only labor cost to state and local government entities of the minimum wage increase. Employers are required to pay 7.65% of their wage costs in Social Security and Medicare taxes. Thus, the total labor cost of the minimum wage increase will be 1.0765 times $14,866,430 or $16,003,712.

---

[2] I assume that persons reporting an hourly wage rate between $7.00 and $7.24 are actually earning $7.25 per hour.

C. Unemployment Benefit Impact

The higher minimum wage will cause firms to reduce their level of employment.[3] As a result, the number of unemployed workers will increase. Thus, another important fiscal cost of the minimum wage increase is the cost of the unemployment insurance benefits for the workers laid off as a result of the minimum wage increase.

To calculate the cost to the unemployment benefits program, I first calculated the number of workers laid off. To do so, I calculated a probability of job loss for each affected Missouri worker (i) in the January 2010 to December 2011 ORG CPS:

$$Probability\ Job\ Loss_{\ i} = \frac{(\$8.25 - Current\ Wage_i)}{Current\ Wage_i} * elasticity_i.$$

I used the preferred employment elasticity (i.e., sensitivity of employment to wage changes) contained in Sabia and Burkhauser (2010), which was -0.6 for individuals aged 16 to 29 without a high school degree and -0.2 for all other individuals. The sole exception was for state and local government workers, where I assumed an elasticity of zero.[4] The sum across all affected workers yielded an estimated job loss of 5,745 jobs.

The next step was to calculate the weekly benefit for the average unemployed worker. Using the benefits calculator on the Missouri unemployment benefits web site and the wage income of average private-sector affected worker ($10,937), yields an average weekly benefit of $109.36[5]. The state of Missouri pays the first 20 weeks of benefits.[6] Thus, each eligible unemployed worker could receive a total of $2,187.20 in

---

[3] For a survey of research regarding the effect of the minimum wage on employment, see David Neumark and William L. Wascher, *Minimum Wages* (Cambridge, MA: MIT Press, 2008).
[4] Joseph J. Sabia and Richard V. Burkhauser, "Minimum Wages and Poverty: Will a $9.50 Federal Minimum Wage Really Help the Working Poor?" *Southern Economic Journal* (January 2010): 592-623.
[5] http://www.labor.mo.gov/DES/Claims/calculator.asp
[6] See http://www.labor.mo.gov/DES/Claims/

benefits paid for by the state of Missouri. These jobs are permanently eliminated and so it is appropriate to calculate the full amount of benefits for each worker.

Unemployment insurance, however, does not cover all unemployed workers. For example, it does not cover people who leave a job voluntarily, people looking for their first job, and re-entrants who previously left the labor force voluntarily. Furthermore, some individuals don't apply for benefits even though they are eligible. I assume that 35% of the unemployed workers will receive unemployment benefits based on analysis by Wenger (2001).[7]

The last step is to calculate the total cost to the Missouri unemployment benefits program. This done by multiplying the number of jobs lost (5,745) times the average benefit amount ($2,187.20) times the percent of unemployed individuals collecting benefits (35%). This calculation yields a figure of $4,397,510. This cost would be borne only during the first year of the minimum wage increase. The inflation adjustments in the minimum wage will also yield costs to the unemployment insurance program, but it is not possible to estimate the amount.

D. Impact on State Income Tax Revenue

The state of Missouri will gain increased revenue through higher income tax taxes paid by workers affected by the minimum wage who remain employed. However, it will

[7] Jeffery Wenger. "Divided We Fall: Deserving Workers Slip through America's Patchwork Unemployment Insurance System." *Economic Policy Institute*, 2001. Sabia and Burkhauser (2010) make the same assumption in their calculation of the amount of unemployment benefits generated by a minimum wage increase.

suffer reduced corporate income tax revenue to the extent the higher wage cost lowers profits of businesses.

To calculate the impact on individual income tax revenue, I again used data from January 2010 to December 2011 ORG CPS. I defined affected workers as those Missouri individuals earning between $7.00 and $8.24 per hour.[8] I used the following formula to estimate the change in income tax revenue:

$$\Delta Tax\ Revenue_i = (Tax_After_i - Tax_Before_i) - Prob_Job_Loss_i * Tax_Before_i,$$

where Tax_After_i is the income tax paid by worker i after the minimum wage increase. Tax_Before_i is the income tax paid by worker i after the minimum wage increase, and $Prob_Job_Loss_i$ is the probability of job loss for worker i. The first term shows the change in individual income tax revenue assuming no job loss and the second term shows the loss in tax revenue due to the employment loss caused by the minimum wage increase.

The income tax calculations were based on two assumptions.[9] First, the 50% percent of affected workers who were under the age 25 who were assumed to be dependents on another person's tax return. As a result, it was assumed that the affected workers' earnings were taxable at the maximum Missouri income tax rate of 6% both and after the minimum wage increase.[10] Second, all persons age 25 and older were assumed to be paying little or no income tax after exemptions and deductions. Thus, about 50% of the earnings increase will be taxed at a rate of 6%.

---

[8] I again assume that persons reporting an hourly wage rate between $7.00 and $7.24 are actually earning $7.25 per hour. The annual earnings level was calculated as the worker's wage rate times usual weekly hours worked times 52.

[9] The same assumptions are used in the State Auditor's fiscal notes for the initiatives.

[10] This assumption will overstate the revenue increase as 20% of affected workers under the age 25 are living by themselves and some of these individuals will not be a dependent on another person's tax return.

The tax calculations reveal an increase in income tax revenue increase to the state. Assuming no workers were laid off by the minimum wage increase, income tax revenue would rise by $6,043,534. However, the state will lose $1,965,446 in income tax revenue due to the lost earnings of private-sector workers no longer employed due to the minimum wage hike.[11] Thus, the net increase in individual income tax revenue is $4,078,088.

Businesses have three options to respond to the higher labor costs of a higher minimum wage. They can reduce their profits, raise prices, or lay off workers. Based on the 2010-2011 ORG CPS data, the minimum wage increase will raise private-sector labor costs by $192,620,900 if employment levels are not reduced. However, labor costs will be lowered by $55,240,790 due to the reduction in employment. Thus, labor costs will, on net, rise by $137,380,110. These increased labor costs may be either passed on to consumers through higher prices or reduced profits or more likely some combination of higher prices and reduced profits. Assuming that businesses absorbed all of the higher costs through reduced profits, the corporate income tax revenue would fall by the Missouri corporate income tax of 6.25% times the rise in labor costs of $137,380,110 * 1.0765 (to account for employer-paid Social Security and Medicare taxes) or $9,243,106.[12] Alternatively, if half of the higher labor costs were passed on to consumers, then corporate income tax revenue would fall by $4,621,553.

[11] The probability of job loss was calculated in the same manner as in the prior section.
[12] The corporate income tax for Missouri is available at: http://dor.mo.gov/business/corporate/

E. Impact on State and Local Sales Tax Revenue

To calculate the impact on state and local sales tax revenue the following approach was undertaken.[13] First, the total increase in worker earnings, adjusted for employment reductions, was calculated using the 2010-2011 ORG CPS. This figure was $152,246,540. Second, the increase in Missouri taxable sales was calculated as 25% of the earnings increase or $38,061,635. Third, the increase in sales tax revenue was calculated by multiplying the taxable sales change times the average state and local rate of 7.67% or $2,919,327.[14]

The higher minimum wage may decrease sales tax revenue to the extent that it reduces business profits, which will lower spending by business owners.

VI. Summary and Conclusions

I was asked by counsel to evaluate the fiscal impact of proposed statutory initiative petitions 2012-084 and 2012-085.

The results of my analysis indicate:

(1) labor costs to state and local government entities, based on state auditor fiscal notes, will rise by more than $1,352,182. A more inclusive estimate indicates that state and local government labor costs will increase by $16,003,712;

[13] The same general approach is used in the State Auditor's fiscal notes for the initiatives.
[14] The average rate comes from http://taxfoundation.org/news/show/27023.html

(2) unemployment benefit costs will rise by $4,397,510 during the first year of the minimum wage increase;

(3) individual income tax revenue will rise by at most $4,078,088;

(4) the loss in corporate income tax revenue could be as high as $9,243,105;

(5) state and local sales tax revenue will rise by at most $2,919,327;

(6) during the first year: state and local governments will incur increased costs of $20,401,222; the change in state and local government revenue will range from -$2,245,690 to +$6,997,415; and the net state and local government fiscal impact will range from -$22,646,912 to -$13,403,807.

"Gender-Related Differences in Pension Coverage," with William Even, in *Women and Work: A Handbook*, Garland Publishing, New York, NY, 1996.

"The Pension Coverage of Young and Mature Workers", with William Even, in *Pension Coverage Issues for the '90s*, eds. Richard Hinz, John Turner, and Phyllis Fernandez, U.S. Government Printing Office, Washington, D.C, 1994.

Working Papers (Economics)

"Deferred Compensation vs. Efficiency Wages: An Experimental Test of Effort Provision and
Self-Selection," with Tim Salmon and Kislaya Prasad, under review, *Journal of Business and Economic Organization*

"What Do Unions Do to Pension Performance?" with William Even, September 2011, under revision

"Teacher Salaries, State Collective Bargaining Laws, and Union Coverage" March 2011, with Barry Hirsch and John Winters.

"The Effects of the 2007-2009 Federal Minimum Wage Increases on Teen Employment," with William Even, under revision, July 2010.

"Participant Direction in Defined Contribution Plans," April 2006, with William Even, under revision.

"Do Pensions Impede Phased Retirement?" September 2004, with William Even, under revision.

Working Papers (Real Estate and Insurance)

"An Empirical Analysis of Socio-Demographic Factors and the Mispricing of Homeowners Insurance in Florida," under review *Journal of Financial Services Research*, with Ronald Cheung, Charles Nyce, Kathleen McCullough, and Cassandra Cole.

"The Impact of No-Fault Legislation on Automobile Insurance Premiums," revised and resubmitted to *North American Actuarial Journal*, with Cassandra Cole, Kevin Eastman, Patrick Maroney, and Kathleen McCullough.

Funded Projects

Employment Policies Institute, 5/2010-7/2010, $16,500 (Trinity University portion), "Employment Effects of the 2007-2009 Federal Minimum Wage Increases," with William Even.

National Science Foundation, 9/2009-8/2012, $125,866 (Trinity University portion), "Incentives in the Workplace: An Experimental Examination of How Wage Differences Across Time and Among Peers Affect Productivity and Self-Selection," with Tim Salmon, Kislaya Prasad, and Hyejin Ku.

Florida Legislature, 10/2007-6/2009, $175,000, "Child Support Guidelines," with Stefan Norrbin and Thomas McCaleb.

Florida Legislature (through University of Florida), 12/2006-9/2007, $223,000, "Analysis of Save our Homes Amendment," with Dean Gatzlaff.

U.S. Administration on Aging (through University of South Florida), 5/2005-9/2007, $175,000, "Employment in the Long-Term Care Industry: The Importance of Recruitment and Retention," with William Even.

Florida Legislature, 2/2003-8/2004, $175,000, "Child Support Guidelines," with Stefan Norrbin and Thomas McCaleb.

Florida Department of Environmental Protection, 6/2002-2/2003, $94,157, "Affordability Index," with Stefan Norrbin and William Serow.

University of South Carolina, 4/2000-11/2000, $10,000, "Minority Homeownership in South Carolina," with Stacy Sirmans.

Florida Department of Business and Professional Regulation, 3/1999-6/1999, $21,739, "Forecasting Housing Demand in Florida," with Stacy Sirmans.

University of South Carolina, 4/1999-11/1999, $10,000, "Forecasting Housing Demand in South Carolina," with Stacy Sirmans.

Florida State University, 6/1999-8/1999, $7,500, "Support for Preparing ECO 2000 as a Web-Based Course."

TIAA-CREF, 8/1998-8/1999, $23,000, "Determinants of Savings in Supplemental Pension Plans: A Case Study of Pension Choices in Higher Education," with Melissa Hardy and Larry Hazelrigg.

Florida Department of Business and Professional Regulation, 4/1998-6/1998, $16,638, "Forecasting Seniors' Demand for Housing in Florida," with Stacy Sirmans.

Florida Department of Business and Professional Regulation, 12/1997-6/1998, $18,472, "Housing Price Appreciation in Orlando and Tampa," with Stacy Sirmans.

Florida State University, 6/1998-8/1998, $7,500, "Support for Preparing ECO 2000 as a Web-Assisted Course."

Florida Department of Business and Professional Regulation, 3/1997-6/1997, $17,898, "Minority Homeownership in Florida," with Stacy Sirmans.

U.S. Department of Labor, Pension Welfare and Benefit Administration, 12/1996-8/1997, $20,000, "The Impact of Rising 401(k) Pension Coverage on Retirement Income," with William Even.

U.S. Department of Labor, Pension Welfare and Benefit Administration, 3/1996-6/1997, $15,000, "The Determinants of 401(k) Participation and Contribution Levels," with William Even.

Florida Department of Business and Professional Regulation, 4/1996-6/1996, $22,702, "Forecasting the Number of New Florida Real Estate Licensees," with Stacy Sirmans.

U.S. Department of Labor, Pension Welfare and Benefit Administration, 3/1995-6/1996, $15,000, "Explaining the Decline in Pension Coverage of Less Educated Workers," with William Even.

Florida State University COFRS Grant, 6/1994-8/1994, $8,000, "The Relative Compensation and Quality of Public and Private Sector Workers."

W.E. Upjohn Institute for Employment Research, 3/1994-12/1995, $35,000, "Pensions and Productivity," with Stuart Dorsey and Christopher Cornwell.

Florida Division of Workers' Compensation, 1/94-12/1995, $100,000, "Worker's Compensation Recipency in Union and Nonunion Workplaces," part of a service contract titled "Research Partnership with the Division of Workers' Compensation," co-investigator (one of several).

University of Wisconsin Institute for Research on Poverty Small Grant Program, 7/1993-6/1994, $15,000, "Racial Composition, Wages, and Quality Sorting," with Barry Hirsch.

U.S. Department of Labor, Pension Welfare and Benefit Administration, 7/1993-6/1993, $10,000, "Trends in Individual and Family Pension Coverage," with William Even.

U.S. Department of Labor, Pension Welfare and Benefit Administration, 6/1992-5/1993, $10,000, "The Pension Coverage of Young and Mature Workers," with William Even.

U.S. Department of Labor, Pension Welfare and Benefit Administration and American Society of Pension Actuaries, 6/1991-5/1992, $10,000, "A Conference on Current Pension Policy Issues," with William Even.

Miami University Faculty Research Grant, 6/1991-8/1991, $4,000, "Projected Growth in Retiree Health Insurance Liabilities."

Ohio Board of Regents Research Challenge Grant, 1/1990-12/1990, $4,980, "Proposal to Enhance the Data Library of the Center of Pension and Retirement Research," with William Even and Samuel Williamson.

Miami University Faculty Research Grant, 6/1990-8/1990, $4,000, "The Role of Firm Size in Pension Coverage and Options."

Miami University Faculty Research Grant, 6/1989-8/1989, $4,000, "Declining Unionism and the Gender Wage Gap," with William Even.

Participation in National Meetings

Panel Discussant, American Real Estate and Urban Economics Association/ASSA meetings, January 2008.

Presented, "Employee Turnover in the Long-Term Care Industry," at Academy Health Annual Research Meetings, June 2007.

Presented, "Participant Direction in Defined Contribution Pension Plans," at International Atlantic Economic Society meetings, October 2006.

Presented, "The Risk and Return of Pension Investments in Employer Stock," at International Atlantic Economic Society meetings, October 2005.

Presented, "Replacing Earnings After Termination: Evidence from the Displaced Worker Survey," at the Allied Social Science Association/National Association of Forensic Economics, January 2002.

Presented, "Labor Market Transitions of Older Workers," at the Allied Social Science Association/Society of Government Economists meetings, January 1999.

Presented, "Why has the Loss in Pension Coverage Accelerated Among Less Educated Workers?" at the American Economic Association Meetings, 1995.

Presented, "Wages and Gender Composition: Why Do Women's Jobs Pay Less?" at the American Economic Association Meetings, 1994, with Barry Hirsch.

Presented, "Pensions, Labor Turnover, and Employer Size" at the American Economic Association Meetings, 1993, with William Even.

Presented, "Why Did Male Pension Coverage Decline in the 1980s?" at the American Economic Association meetings, 1992, with William Even.

Participation in Regional Meetings

Presented "Unions and Pension Performance: The Role of Pension Design," at Southern Economics Association meetings, November 2009.

Panel member, "Recent Federal Reserve Policy: An Evaluation" at Southern Economics Association meetings, November 2009.

Discussant, "Topics in Health Economics," at Southern Economics Association meetings, November 2009.

Discussant, "Teacher Pay, Principals, and Schooling," at Southern Economics Association meetings, November 2009.

Presented "Is Bigger Still Better?: The Decline of the Wage Premium at Large Firms," at Western Economic Association meetings, July 2009.

Presented "Is Bigger Still Better?: The Decline of the Wage Premium at Large Firms," at Eastern Economic Association meetings, February 2009.

Panel Discussant at the Southern Economic Association meetings, November 2008.

Presented "Is Bigger Still Better?: The Decline of the Wage Premium at Large Firms," at Southern Economic Association meetings, November 2008.

Presented "The Growth of Participant Direction in Defined Contribution Pensions," at Western Economic Association meetings, July 2008.

Chair "Pensions and Retirement" Session at Southern Economic Association meetings, November 2007.

Presented "The Growth of Participant Direction in Defined Contribution Pensions," at Southern Economic Association meetings, November 2007.

Presented, "Participant Direction in Defined Contribution Pension Plans," at Southern Economic Association meetings, November 2006.

Panel Discussant, Southern Economic Association meetings, November 2005.

Presented, "Do Pensions Impede Phased Retirement?" at the Southern Economic Association meetings, November 2004.

Presented, "When Will the Gender Gap in Retirement Income Narrow?" at the Southern Economic Association meetings, November 2003.

Presented, "How Will the Growth of DC and 401(k) Plans Affect Pension Income?" at the Southern Economic Association meetings, November 2002.

Presented, "Racial Composition, Wages, and Quality Sorting," at the Southern Economic Association meetings, November 1999.

Presented, "Racial and Ethnic Differences in Pension Coverage and Benefit Levels," at the Southern Economic Association meetings, November 1998.

Presented, "Factors Influencing Participation and Contribution Levels in 401(k) Plans," at the Western Economics Association meetings, July 1998.

Presented, "Aging at Work: Employment Determination, Firm Strategies, and Public Policy in the United States," at the Western Economic Association meetings, July 1994.

Presented, "Why Did Male Pension Coverage Decline in the 1980s?" at the Western Economic Association meetings, July 1992.

Presented "Plant Size and the Decline of Unionism," at the Southern Economic Association meetings, 1989, with William Even.

Panel Discussant, Southern Economic Association meetings, November 1989.

Presented "The Labor Force Participation and Earnings Profiles of Married Female Immigrants," at the Southern Economic Association meetings, November 1988.

Presented "Pensions, Screening, and the Gender Wage Gap," at the Southern Economic Association meetings, November 1988.

Session Chair and Panel Discussant at the Southern Economic Association meetings, November 1988.

Participation in Invited Seminars, Conferences, and other Presentations

Presented, "Teaching Macroeconomics During Troubled Times," at Creative Ideas for Your Basic Economics Course Conference at Florida State University, February 2012.

Presented, "Participant Direction in Defined Contribution Pension Plans," at Pennsylvania State University, April 2010.

Presented, "The Parallels Between the Japanese Economic Crisis of the 1990s and the US Today" at Creative Ideas for Your Basic Economics Course Conference at Florida State University, February 2010.

Chair "Minimum Wage & EITC" Session at Society of Labor Economists meetings, May 2009.

Presented "Participant Direction in Defined Contribution Plans," at Lehigh University, April 2009.

Presented "Is Bigger Still Better?: The Decline of the Wage Premium at Large Firms," at Association of Private Enterprise Education meetings, April 2009.

Presented "The Growth of Participant Direction in Defined Contribution Pensions," at Trinity University, October 2008.

Presented "The Growth of Participant Direction in Defined Contribution Pensions," at Georgia State University, April 2008.

Presented "The Growth of Participant Direction in Defined Contribution Pensions," at Association of Private Enterprise Education meetings, April 2008.
Presented, "Improving Pension Coverage at Small Firms," at Hudson Institute, May 2006.

Presented, "Participant Direction in Defined Contribution Plans," at Society of Labor Economics meetings, May 2006.

Presented, "Participant Direction in Defined Contribution Plans," at Association of Private Enterprise Education meetings, April 2006.

Presented, "Participant Direction in Defined Contribution Plans," at University of Wisconsin-Milwaukee, April 2006.

Invited Panel Participant for Pepper Foundation and Center Symposium on pension reform, Washington, DC, February 2006.

Presented, "The Risk and Return of Pension Investments in Employer Stock," at West Virginia University, April 2005.

Presented, "The Risk and Return of Pension Investments in Employer Stock," at the University of Kentucky, November 2004.

Presented, "The Causes and Consequences of Company Stock Holdings in Pension Funds," at the Federal Reserve Bank of Atlanta, April 2004.

Presented, "The Causes and Consequences of Company Stock Holdings in Pension Funds," at the University of Oklahoma, February 2004.

Presented, "Tracking Union and Nonunion Wages in the U.S.: Can the Evidence be Reconciled?" at the Middlebury Annual Conference on Economic Issues, April 2002.

Presented, "How Will the Growth of DC and 401(k) Plans Affect Pension Income?" at the Miami University Center for Pension and Retirement Research Conference, June 2001.

Presented, "Benefits and Worker Productivity," Benefits for the Workplace of Tomorrow Conference, Wharton School, University of Pennsylvania, May 2001.

Participant, Innovations in Managing the Financial Risks of Retirement Conference, Wharton School, University of Pennsylvania, May 2000.

Presented "Using Hi-Tech in Large Lectures," at Association of Private Enterprise Education meetings, April 2000.

Presented "Employee Participation in 401(k) Plans," at University of Wisconsin-Milwaukee, October 1999.

Presented "Gender, Race, and Ethnicity in the Labor Market," as part of the Smith Chair course in Labor Economics at Brigham Young University, September 1999.

Presented, "The Decline in Pension Coverage Among Less Educated Workers," at the Florida State University Economics Department Seminar Series, 1996.

Presented, "Children's Effects on Women's Labor Market Attachment and Earnings" at the Conference on the Changes in Working Time in Canada and the United States, Canadian Employment Research Forum, 1996.

Presented, "Earnings, Rents, and Competition in the Airline Labor Market" at the Ohio State University Economics Department Seminar Series, 1996.

Presented, "Earnings, Rents, and Competition in the Airline Labor Market" at the Florida State University Economics Department Seminar Series, 1995.

Presented, "Employer Size and Labor Turnover: The Role of Pensions," at Syracuse University, 1995.

Presented, "Earnings, Rents, and Competition in the Airline Labor Market" while visiting scholar at the Federal Reserve Bank of Cleveland, 1995.

Presented, "Trends in Individual and Household Pension Coverage," at the Miami University Center for Pension and Retirement Research Conference, 1994.

Presented, "Racial Composition, Quality Sorting, and the Black-White Wage Gap" at the University of Wisconsin, Institute for Research on Poverty, Small Grants Workshop, 1993, with Barry Hirsch.

Presented, "Why Did Male Pension Coverage Decline in the 1980s?" at the Florida State University Economics Department Seminar Series, 1992.

Participant at National Bureau of Economic Research (NBER) Labor Studies meetings of the Summer Institute, 1992.

Presented, "Why Did Male Pension Coverage Decline in the 1980s?" at the Miami University Conference on Current Pension Policy Issues, 1992.

Organizer and participant at conference on "Contemporary Issues in Pension Economics," hosted by the Center for Pension and Retirement Research, Miami University, 1990.

Presented "The Effect of International Competition on Union and Nonunion Wages," at the University of Cincinnati Seminar Series, 1987.

Depositions and Trial Testimony: 2008 to 2012

1. Angela Speed and Adrian Speed vs. Hertz Corporation
   Atty: Dawn Pompey Whitehurst; Brevard County, Florida; gave deposition; wrongful injury; 2008; Case No: 05-2005-CA-065447

2. Patricia Morrison vs. Anthony Mork and Microspine Surgery
   Atty: Steven Andrews; Walton County, Florida; testified at trial; wrongful injury; 2008; Case No: 06000249CA.

3. James Tomaselli vs. State of Florida, Department of Corrections
   Atty: Gordon Leech; Martin County, Florida; gave deposition; wrongful termination; 2008; Case No: 01-554-CA.

4. Russell Martin, et al. v. City of Atlanta, et al.
   Atty: Andrew Coffman; U.S. District Court, Northern District of Georgia, Atlanta 5Division; gave deposition; racial discrimination; 2008; Case CA File No: 1:07-cv-00326-BBM

5. McCabe, et al. v. Harmon Fruit, et al.
   Atty: Larry Perry; Polk County, Florida; gave deposition; wrongful death; 2008; Case 53-2005-CA-003612-0000-00

6. Thomas Faulkner v. Michael Chertoff and Department of Homeland Security
   Atty: John Davis; U.S. District Court; Northern District of Florida; gave deposition; wrongful termination; 2009; Case 4:08CV341-SPM/WCS

7. Matthew Debord and Tabitha Debord vs. G & S Material Service et al.
   Atty: Hubert Brown; U.S. District Court; Northern District of Florida; gave deposition; wrongful injury; 2009; Case 3:07cv365-LAC/MD

8. Jessica Loveday vs. USA
   Atty: Anthony Caggiano; U.S. District Court; Northern District of Florida; gave deposition; wrongful injury; 2009; Case 1:08cv205/SPM

9. Julia Keyes vs. AIG
   Atty: Larry Perry; Jackson County, Florida; gave deposition; wrongful injury; 2009; Case 08706CA

10. Estate of Linda DePuy vs. Broeseker et al.
    Atty: Steve Andrews; Leon County, Florida; gave deposition; wrongful death; 2009; Case 2007 CA 2509

11. Oliver and Sollman vs. VSoft Inc.
    Atty: Larry Pankey; U.S. District Court, Northern District of Georgia, Atlanta Division; gave deposition; age discrimination; 2009; Case CA File No: 1:09-CV-0185

12. Yolanda Young vs. Covington and Burling, LLP
    Atty: Latif Damon; U.S. District Court for the District of Columbia; gave deposition; racial discrimination; 2009; Case CA File No: 1:09-CV-0464 RBW

13. Deborah Suboh vs. Mark Bergeson et al.
    Atty: Stephanie Wright and Charlotte Perrell; Georgia, Dekalb County; Case 07A77585-5, gave deposition; legal malpractice; 2010.

14. Rolando Simmons vs. Davis and Peterson
    Atty: Hubert Brown; Florida, Calhoun County; Case 2008-0150-CA, gave deposition and testified at trial; medical malpractice; 2010.

15. Lorie J. Marshall, et al. vs. H & R Block Tax Services, Inc.
    Atty: Allan Steyer; U.S, U.S. District Court
    Southern District of Illinois; Case No. 3:08-CV591-MJR; gave deposition; consumer damages; 2010.

16. Daren Davis vs. Joseph Austin and Terry Roberts Work Site
    Atty: Anthony Caggiano; Florida, Osceola County; gave deposition; wrongful injury; 2010; Case 2006 CA 002997 AN

17. David Darrow vs. Adventist Health Systems/Sunbelt Inc.
    Atty: Anthony Caggiano; Florida, Orange County; gave deposition; wrongful injury; 2010; Case 48-2009-CA-004897-0

18. Samuel Gonzalez vs. Gurdev Singh Nijjar et al.
    Atty: Ramon Rodriguez; Texas, El Paso County; gave deposition; wrongful injury; 2010; Case 2007-011

19. John Davis vs. Devereux Foundation.
    Atty: Thomas Brown; Florida, Brevard County; gave deposition; wrongful injury; 2010; Case 99-15992-CA-F

20. Al Kowalski vs. et al. YellowPages.Com, LLC
    Atty: Peter Pearlman; U.S. District Court Southern District of New York; Case No. 10-7318 (PGG); gave deposition; consumer damages; 2011.

21. Christina Glover and Jason Glover vs. Publix Super Markets
    Atty: Phelicia Steill; Florida, Leon; Case No. 08 CA 2695; gave deposition; wrongful injury; 2011.

22. Lissette Cartagena and William Cartagena vs. Bracero et al.
    Atty: Thomas Brown; Florida, Orange County; Case No. 07-CA-2645 DIV 34; gave deposition and testified at trial; wrongful injury; 2011.

23. Lillie Conyers and James Conyers vs. Werner Enterprises et al.
    Atty: Thomas Brown; Florida, Jackson County; Case No. 09-1174-CA; gave deposition; wrongful injury; 2011.

24. Shannon McCants vs. Wackenhut Corporation
    Atty: Dawn Pompey Whitehurst; Duval County, Florida; gave deposition and testified at trial; wrongful death; 2011; Case No: 16-2008-CA-014834

25. Christina Whipple versus R.E.S.A, Inc.
    Atty: Susan Haney; Bexar County, Texas; gave deposition; business damages; 2011; Case No.: 2009-CI-17074

26. Daniel Plouffe, et al. versus General Motors, LLC
    Atty: Michael Pitt; Wayne County, Michigan; gave deposition; age discrimination; 2012; Case No.: Case No. 11-007645-CL

27. Johnny Cash versus State Farm
    Atty: Steven Andrews; Leon County, Florida; testified at trial; wrongful injury; 2012; Case No.: Case No. 10-CA-2429

Fiscal Note Summary

State and local governments estimate no direct costs or savings from the proposal, but operating costs could increase by an unknown annual amount that could be significant. State and local government tax revenue could change by an unknown annual amount ranging from a $7.5 million decrease to a $261 million increase depending on business decisions.

The Honorable Nicole Galloway
State Auditor
State Capitol Building
Jefferson City, MO 65101

RE: Petition approval request from Richard Von Glahn regarding a proposed statutory amendment to Chapter 290, Version 15 (2018-210)

Dear Auditor Galloway:

Enclosed please find an initiative petition sample sheet for a proposal to amend the Revised Statutes of Missouri filed by Richard Von Glahn on April 3, 2017.

We are referring the enclosed petition sample sheet to you for the purposes of preparing a fiscal note and fiscal note summary as required by Section 116.332, RSMo. Section 116.175.2, RSMo requires the state auditor to forward the fiscal note and fiscal note summary to the attorney general within twenty days of receipt of the petition sample sheet.

Thank you for your immediate consideration of this request.

Sincerely,

John R. Ashcroft

Be it enacted by the people of the state of Missouri:

Sections 290.502 and 290.527 of the Revised Statutes of Missouri are amended and a new section to be known as section 290.529 is enacted to read as follows:

290.502. 1. Except as may be otherwise provided pursuant to sections 290.500 to 290.530, effective January 1, 2007, every employer shall pay to each employee wages at the rate of $6.50 per hour, or wages at the same rate or rates set under the provisions of federal law as the prevailing federal minimum wage applicable to those covered jobs in interstate commerce, whichever rate per hour is higher.

2. The minimum wage shall be increased or decreased on January 1, 2008, and on January 1 of successive years, by the increase or decrease in the cost of living. On September 30, 2007, and on each September 30 of each successive year, the director shall measure the increase or decrease in the cost of living by the percentage increase or decrease as of the preceding July over the level as of July of the immediately preceding year of the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) or successor index as published by the U.S. Department of Labor or its successor agency, with the amount of the minimum wage increase or decrease rounded to the nearest five cents.

3. Except as may be otherwise provided pursuant to sections 290.500 to 290.530, and notwithstanding subsection (1) of this section, effective January 1, 2019, every employer shall pay to each employee wages at the rate of not less than $8.50 per hour, or wages at the same rate or rates set under the provisions of federal law as the prevailing federal minimum wage applicable to those covered jobs in interstate commerce, whichever rate per hour is higher. Thereafter, the minimum wage established by this subsection shall be increased each year by $.75 per hour, effective January 1 of each of the next six years, until it reaches $13.00 per hour, effective January 1, 2025. Thereafter, the minimum wage established by this subsection shall be increased or decreased on January 1, 2026, and on January 1 of successive years, per the method set forth in subsection (2) of this section. If at any time the federal minimum wage rate is above or is thereafter increased above the minimum wage then in effect under this subsection, the minimum wage required by this subsection shall continue to be increased pursuant to this subsection (3), but the higher federal rate shall immediately become the minimum wage required by this subsection and shall be increased or decreased per the method set forth in subsection (2) for so long as it remains higher than the state minimum wage required and increased pursuant to this subsection.

4. For purposes of this section, the term "public employer" means an employer that is the state or a political subdivision of the state, including a department, agency, officer, bureau, division, board, commission, or instrumentality of the state, or a city, county, town, village, school district, or other political subdivision of the state. Subsection (3) of this section shall not apply to a public employer with respect to its employees. Any public employer that is subject to subsections (1) and (2) of this section shall continue to be subject to those subsections.

290.527. Any employer who pays any employee less wages than the wages to which the employee is entitled under or by virtue of sections 290.500 to 290.530 shall be liable to the employee affected for the full amount of the wage rate and an additional [equal] amount equal to twice the unpaid wages as liquidated damages, less any amount actually paid to the employee by the employer and for costs and such reasonable attorney fees as may be allowed by the court or jury. The employee may bring any legal action necessary to collect the claim. Any agreement between the employee and the employer to work for less than the wage rate shall be no defense to the action. All actions for the collection of any deficiency in wages shall be commenced within [two] three years of the accrual of the cause of action.

290.529. Except in the circumstances set forth in section 290.523, all the provisions of sections 290.500 to 290.530 are severable. If any provision, including any section, subsection, subdivision, paragraph, sentence, or clause, of sections 290.500 to 290.530, or the application thereof to any person or circumstance, is found by a court of competent jurisdiction to be invalid, unconstitutional, or unconstitutionally enacted, such decision shall not affect other provisions or applications of sections 290.500 to 290.530 that can be given effect without the invalid, unconstitutional, or unconstitutionally enacted provision or application.

MISSOURI STATE AUDITOR'S OFFICE
FISCAL NOTE (18-210)

Subject

Initiative petition from Richard Von Glahn regarding a proposed amendment to Chapter 290 of the Revised Statutes of Missouri. (Received April 4, 2017)

Date

April 24, 2017

Description

This proposal would amend Chapter 290 of the Revised Statutes of Missouri.

The amendment is to be voted on in November 2018.

Public comments and other input

The State Auditor's office requested input from the **Attorney General's office,** the **Department of Agriculture,** the **Department of Economic Development,** the **Department of Elementary and Secondary Education,** the **Department of Higher Education,** the **Department of Health and Senior Services,** the **Department of Insurance, Financial Institutions and Professional Registration,** the **Department of Mental Health,** the **Department of Natural Resources,** the **Department of Corrections,** the **Department of Labor and Industrial Relations,** the **Department of Revenue,** the **Department of Public Safety,** the **Department of Social Services,** the **Governor's office,** the **Missouri House of Representatives,** the **Department of Conservation,** the **Department of Transportation,** the **Office of Administration,** the **Office of State Courts Administrator,** the **Missouri Senate,** the **Secretary of State's office,** the **Office of the State Public Defender,** the **State Treasurer's office, Adair County, Boone County, Callaway County, Cass County, Clay County, Cole County, Greene County, Jackson County, Jasper County, St. Charles County, St. Louis County, Taney County,** the **City of Cape Girardeau,** the **City of Columbia,** the **City of Jefferson,** the **City of Joplin,** the **City of Kansas City,** the **City of Kirksville,** the **City of Mexico,** the **City of Raymore,** the **City of St. Joseph,** the **City of St. Louis,** the **City of Springfield,** the **City of Union,** the **City of Wentzville,** the **City of West Plains, Cape Girardeau 63 School District, Hannibal 60 School District, State Technical College of Missouri, Metropolitan Community College, University of Missouri, St. Louis Community College, University of Central Missouri, Harris-Stowe State University, Lincoln University, Missouri State University, Missouri Southern State University, Missouri Western State University, Northwest Missouri State University, Southeast Missouri State University, Truman State University, Kansas City Board of Police Commissioners, The Metropolitan Police Department - City of St. Louis,** the **St. Louis County Board of Elections,** the **Board of Election**

Commissioners City of St. Louis, the **Kansas City Board of Election Commissioners,** the **Platte County Board of Elections,** the **Jackson County Election Board,** and the **Clay County Board of Election Commissioners**.

Lara Granich and **Missouri Jobs with Justice Voter Action** provided information as proponents of the proposal to the State Auditor's office.

Robert Bonney, Chief Executive Officer of the Missouri Restaurant Association provided information as an opponent of the proposal to the State Auditor's office.

Assumptions

Officials from the **Attorney General's office** indicated they expect that, to the extent that the enactment of this proposal would result in increased litigation, they can absorb the costs associated with that increased litigation using existing resources. However, if the enactment of this proposal were to result in substantial additional litigation, they may request additional appropriations. They do not expect that the enactment of this proposal would result in any other increased costs to their office.

Officials from the **Department of Agriculture** indicated there is no fiscal impact to their department for this initiative petition.

Officials from the **Department of Economic Development** indicated no impact to their department.

Officials from the **Department of Higher Education** indicated this initiative petition would not have a fiscal impact on their department since public employers are exempt from the new provisions proposed.

Officials from the **Department of Health and Senior Services** indicated this proposal would have no direct fiscal impact on their department since government employees are exempt from its provisions. However, employees of certain entities that receive funding through the department's budget would be impacted, such as Medicaid Home and Community Based Services vendors/providers and Area Agencies on Aging.

Officials from the **Department of Insurance, Financial Institutions and Professional Registration** indicated this petition, if passed, will have no cost or savings to their department.

Officials from the **Department of Mental Health** indicated this proposal creates no direct obligations or requirements to their department that would result in a fiscal impact.

Officials from the **Department of Natural Resources** indicated their department defers to the Office of Administration to determine the fiscal impact of this proposal.

Officials from the **Department of Corrections** indicated they defer to the Office of Administration.

Officials from the **Department of Labor and Industrial Relations** indicated no fiscal impact on their department.

Officials from the **Department of Revenue** indicated this petition will have no fiscal impact on their department. Their department defers to the Office of Administration for a state impact.

Officials from the **Department of Public Safety - Office of the Director** indicated they will defer to the response provided for this initiative petition by the Office of Administration - Human Resources.

Officials from the **Department of Social Services** indicated no fiscal impact on their department. They defer to the Office of Administration.

Officials from the **Governor's office** indicated there should be no added cost or savings to their office.

Officials from the **Missouri House of Representatives** indicated no fiscal impact to their office.

Officials from the **Department of Conservation** indicated that no adverse fiscal impact to their department would be expected as a result of this proposal.

Officials from the **Department of Transportation** indicated unknown fiscal impact.

Officials from the **Office of Administration** indicated the proposal amends Sections 290.502 and 290.527, RSMo and adds Section 290.529, RSMo.

Section 290.502, RSMo, increases the minimum wage to $8.50 per hour, beginning January 1, 2019 and by another $0.75 per hour each year until it reaches $13.00 per hour beginning January 1, 2025. Thereafter, the minimum wage will be adjusted annually based on the increase/decrease in the cost of living.

The proposal exempts public employers from both requirements; therefore there would be no cost to the State of Missouri.

Because no tax rates are affected, there is no direct impact on general and total state revenues. However, these proposals may have several indirect affects which could impact revenue collections by an unknown amount, including but not limited to:

- Increased wages for certain employees. According to the US BLS, in 2015, Missouri had 57,000 hourly employees earning wages at or below the federal minimum wage;[1]
- Increased consumption by those employees;
- Lower overall employment (if employers choose to hold costs steady);

[1] http://www.bls.gov/opub/reports/minimum-wage/2015/home.htm

- Lower business investment (if employers' payrolls increase);
- Increased prices as firms pass–through labor costs.

This proposal should not impact their office.

Officials from the **Office of State Courts Administrator** indicated there is no fiscal impact on the courts.

Officials from the **Missouri Senate** indicated no fiscal impact on their office.

Officials from the **Secretary of State's office** indicated their office is required to pay for publishing in local newspapers the full text of each statewide ballot measure as directed by Article XII, Section 2(b) of the Missouri Constitution and Section 116.230-116.290, RSMo. Their office is provided with core funding to handle a certain amount of normal activity resulting from each year's legislative session. Funding for this item is adjusted each year depending upon the election cycle with $1.3 million historically appropriated in odd numbered fiscal years and $100,000 appropriated in even numbered fiscal years to meet these requirements. Through FY (fiscal year) 2013, the appropriation had historically been an estimated appropriation because the final cost is dependent upon the number of ballot measures approved by the General Assembly and the initiative petitions certified for the ballot. In FY 2015, the General Assembly changed the appropriation so that it was no longer an estimated appropriation. In FY 2017 their office was appropriated $2.6 million to publish the full text of the measures. In FY 2017, at the August and November elections, there were 6 statewide Constitutional Amendments or ballot propositions that cost $2.4 million to publish (an average of $400,000 per issue). Their office will continue to assume, for the purposes of this fiscal note, that it should have the full appropriation authority it needs to meet the publishing requirements. Because these requirements are mandatory, they reserve the right to request funding to meet the cost of their publishing requirements if the Governor and the General Assembly again change the amount or continue to not designate it as an estimated appropriation.

Officials from the **Office of the State Public Defender** indicated this initiative petition will not have any significant impact on their office.

Officials from the **State Treasurer's office** indicated this proposal would have no impact on their office, as it would not apply to state employees.

Officials from **Greene County** indicated there are no estimated costs or savings to report from their county for this initiative petition.

Officials from the **City of Kansas City** indicated this petition may have a small negative fiscal impact on their city as a result of the increased hourly minimum wage being higher than the hourly rate paid some city employees.

Officials from the **City of Raymore** indicated no fiscal impact.

Officials from **University of Missouri** indicated they are not able to estimate any significant financial impact on their university.

Officials from **University of Central Missouri** indicated they estimate no fiscal impact since they are excluded under the public employer definition in section 4.

Officials from the **Missouri State University** indicated no fiscal impact.

Officials from **Missouri Southern State University** indicated they do not anticipate any fiscal impact from this initiative petition.

Officials from **Missouri Western State University** indicated the wording is unclear as to whether Colleges/Universities are included in this petition. In assuming they are included, they calculate the following significant fiscal impact to their university. The proposal will have a severe negative impact on the university. A projected minimum wage increase in 2019 to $8.50 an hour would increase their payroll expenditure for 2019 by approximately $275,800.00. With a proposed increase of .75 per hour for six years, reaching $13.00 an hour by 2025 their payroll expenses would see an approximate increase of $2,039,200.00, proving to be detrimental to the university.

Officials from the **Kansas City Board of Election Commissioners** indicated no fiscal effect on their operations.

Officials from the **Platte County Board of Elections** indicated no fiscal impact.

Officials from the **Jackson County Election Board** indicated this petition does not have a fiscal impact on their office.

Lara Granich and **Missouri Jobs with Justice Voter Action** provided the following information as proponents of this initiative petition.

Re: Fiscal Impact Analysis of Minimum Wage Initiative Petitions

Summary of Proposed Minimum Wage Initiatives						
Version Number		**Initiative Summary**				
Version Number Used in This Impact Analysis	**Version Number Assigned by the Secretary of State**	**Minimum Wage Level**	**Matches the Federal Minimum Wage When It Is Higher**	**Stronger Penalty for Wage Violations**	**Tipped Worker Minimum Wage (as a % of Full Minimum Wage)**	**Allows Localities to Enact a Local Minimum Wage**
Version 13	2018 - 204	$12 by 2023 *(Start at $8.60 and $.85/year)*	Yes	Yes	No Change	No
Version 14	2018 - 205	$12 by 2023 *(Start at $8.60 and $.85/year)*	Yes	No	No Change	No
Version 15	2018 - 206	$12 by 2023 *(Start at $8.60 and $.85/year)*	No	No	No Change	No
Version 16	2018 - 207	$12 by 2024 *(Start at $8.50 and $.70/year)*	Yes	Yes	No Change	No
Version 17	2018 - 208	$12 by 2024 *(Start at $8.50 and $.70/year)*	Yes	No	No Change	No
Version 18	2018 - 209	$12 by 2024 *(Start at $8.50 and $.70/year)*	No	No	No Change	No

Version 19	2018 - 210	$13 by 2025 *(Start at $8.50 and $.75/year)*	Yes	Yes	No Change	No
Version 20	2018 - 211	$13 by 2025 *(Start at $8.50 and $.75/year)*	Yes	No	No Change	No
Version 21	2018 - 212	$13 by 2025 *(Start at $8.50 and $.75/year)*	No	No	No Change	No
Version 22	2018 - 213	$11 by 2022 (Start at $8.75 and $.75/year)	Yes	Yes	No Change	No
Version 23	2018 - 214	$11 by 2022 (Start at $8.75 and $.75/year)	Yes	No	No Change	No
Version 24	2018 - 215	$11 by 2022 (Start at $8.75 and $.75/year)	No	No	No Change	No
Version 25	2018 - 216	$11 by 2021 (Start at $9; $1/year)	Yes	Yes	No Change	No
Version 26	2018 - 200	$12 by 2022 (Start at $9; $1/year)	Yes	No	No Change	No
Version 27	2018 - 201	$13 by 2023 (Start at $9; $1/year)	Yes	No	No Change	No
Version 28	2018 - 202	$12 by 2024 (Start at $8.25; .75/year)	Yes	Yes	100%	No
Version 29	2018 - 203	$13 by 2025 (Start at $8.50; .75/year)	Yes	Yes	60%	No
Version 30	2018 - 196	$12 by 2022 (Start at $9; $1/year)	Yes	Yes	100%	Yes
Version 31	2018 - 197	$12 by 2022 (Start at $9; $1/year)	Yes	Yes	60%	Yes
Version 32	2018 - 198	$13 by 2023 (Start at 9; $1/year)	Yes	Yes	100%	Yes

Version 33	2018 - 199	$13 by 2023 (Start at $9; $1/year)	Yes	Yes	60%	Yes

This letter is from Lara Granich and Missouri Jobs with Justice Voter Action, proponents of the above-referenced Minimum Wage Initiative Petitions. Pursuant to RSMo. Section 116.175, we write to submit the following fiscal impact information to assist your office in its analysis of the fiscal impact of the above-mentioned seven proposed Minimum Wage Initiative Petitions.

Our analysis estimates the impact of the proposed Minimum Wage Initiative Petitions on state and local sales and personal income tax revenue in Missouri. We follow the process that has been used in the past to estimate the impact of minimum initiative petitions on state and local sales and personal income tax revenue, with some refinements. We also address certain claims that have been made by opponents of similar initiative petitions in the past.

As these petitions exclude public workers from the proposed minimum wage increases, we do not include in our analysis an estimate of the impact on state and local payroll costs of the proposed Minimum Wage Initiative Petitions.

I. Estimate of Number of Workers Affected Statewide and the Impact on Their Wages

Table 1. Summary of the Number of Affected Workers and Aggregate Wage Increases for Missouri in the Final Year of Minimum Wage Implementation.

Proposal	Year of Peak Minimum Wage (MW)	Proposed Peak MW	Tipped MW in Peak MW Year	Workers Affected by MW increase	Aggregate Annual Wage Increase in Nominal Dollars
13,14,15[a]	2023	$ 12.00	$ 6.00	835,350	$4,358,798,129
16,17,18[a]	2024	$ 12.00	$ 6.00	819,652	$4,209,438,048
19,20,21[a]	2025	$ 13.00	$ 6.50	900,788	$5,309,336,662
22,23,24[a]	2022	$ 11.00	$ 5.50	738,515	$3,347,138,756
25	2021	$ 11.00	$ 5.50	761,164	$3,469,534,559
26	2022	$ 12.00	$ 6.00	852,284	$4,510,285,824
27	2023	$ 13.00	$ 6.50	949,801	$5,667,065,534
28	2024	$ 12.00	$ 9.60	832,328	$4,288,614,460
29	2025	$ 13.00	$ 7.80	905,942	$5,332,471,496
30	2022	$ 12.00	$ 8.40	864,090	$4,558,317,729
31	2022	$ 12.00	$ 6.84	855,887	$4,523,341,931

32	2023	$ 13.00	$ 9.75	948,421	$5,745,051,956
33	2023	$ 13.00	$ 7.54	942,566	$5,685,951,766

Notes: Author's Analysis of American Community Survey (ACS) Data from 2014.
(a) Since these proposals only vary on non-economic factors, their economic and fiscal impacts are treated as equal for the purposes of this report.

Across the proposals analyzed, the total aggregate wage increase for workers in Missouri ranges from a low of $3.347 billion (Proposals 22-24) to a high of $5.745 billion under Proposal 32. While some proposals have the same final impact numbers, they have different impacts in the initial years (not listed) based on the relative pace of increases in earlier years. A full, year-by-year impact analysis is presented in Appendix Tables A1 through A13 below.

The wage impact of an increase in the minimum wage for the state of Missouri is calculated using the following procedure. The American Community Survey (ACS) Public Use Micro Sample for the most recent year available (2014) for the state of Missouri was downloaded from the US Census Bureau. The American Community Survey was chosen over the Current Population survey because the ACS has a significantly larger sample. We followed the method of Perry, Thomason, and Bernhardt (2016) for calculating an hourly wage rate from the ACS based on observed total annual wage income, typical hours worked each week and weeks worked per year. Since ACS income figures are clustered around whole-numbers, we smoothed the wage distribution by randomly adding or subtracting $0.25 from each wage figure.

Wage adjustments were made only for those individuals earning less than the proposed minimum wage, or proposed tipped minimum wage. We did not make additional adjustments for the "ripple effect" of minimum wage increases on workers earning slightly above the new threshold. Recent evidence suggests that workers earning up to 15 percent above of the minimum wage also receive small increases in response to a minimum wage increase. (See Wicks-Lim (2006) and Dube, Giuliano and Leonard (2015).) Thus, the estimated impacts listed above are likely to be smaller than the actual impact of increasing the minimum wage to the proposed level.

The proposed minimum wage increases exclude public employees. However, it was not practicable to exclude public employees from these calculations because the ACS does not have a published variable that allows for identification of public employees. Nonetheless, this inclusion of public employees should have only a minimal impact on our results, since their numbers are small and most already earn more than the proposed minimum wage increases.[1]

All wages from the 2014 survey were adjusted upward to account for inflation between the time of the survey and the time of measurement of the impact. Actual rates of inflation were used to adjust wages up to 2016. For all subsequent years between 2017 and 2028, baseline wages were adjusted using the projected annual average rate of change in the Consumer Price Index for Urban Workers (CPI-U) for the Midwest region. The 2015 and 2016 Missouri Minimum wage of $7.65 was adjusted by the same factor prior to measuring the impact of a change to the proposed minimum wage in 2019.

After these adjustments, the resulting hourly wage of all employees was compared to the proposed minimum wage. A total of twenty-one proposals were analyzed. For each proposal, we constructed a baseline wage scenario that used only basic wage changes from expected inflation rates to predict each ACS respondent's hourly wage rate in each year

[1] For Missouri's state employees, this can be validated by viewing the earnings of all state employees at: http://mapyourtaxes.mo.gov/MAP/Employees/. In larger counties and cities most all public employees already earn more than the highest proposed minimum wage. Smaller counties and towns may have some public employees who earn less than the highest proposed minimum.

between 2019 and 2028. We then constructed a counterfactual, or "proposed" wage distribution for each worker under all twenty-one minimum wage proposed scenarios. Since the minimum wage proposals offer nine different paths for raising the minimum wage for all non-tipped private sector workers, and different wage paths for tipped workers, we create separate minimum wage changes for tipped and non-tipped workers. Specifically, we used information on a worker's occupation and observed wage levels to separately identify tipped workers and assign them the proposed tipped minimum wage in each year, rather than the higher non-tipped minimum wage.[2]

If the proposed minimum wage was less than the inflation-adjusted hourly earnings of an employee, then no impact was calculated. If the proposed minimum wage was more than the hourly earnings for an employee, then the difference between the inflation-adjusted hourly earnings (i.e. baseline) and the proposed minimum wage was calculated. That difference was multiplied by the number of hours the employee worked in the year to calculate the annual impact for that employee. The result was then multiplied by a weighing factor for that employee in the population. The total impact for the state of Missouri was then summed across all affected workers to generate a total estimated increase in wage income in the state.

We do not include an estimate of job losses due to minimum wage changes. Existing research is clear that past minimum wage increases have had no measurable effect on aggregate employment levels. Larger minimum wage increases, such as those in Los Angeles, Seattle, and other jurisdictions, have not yet been studied to detect a clear disemployment effect. While it is possible that there may be some employment losses due to automation or other factors, this potential negative effect is likely offset by the positive potential job growth stemming from multiplier effects of the spending of minimum wage workers who receive substantial raises. There is substantial research to indicate that increases in the minimum wage have multiplier effects that increase the direct effects. For this reason and because of the likely increases in wages for individuals who earn above the proposed minimum wage rates, the impacts summarized in the table are considered conservative estimates relative to the total impact that would occur as a result of increasing the minimum wage to the proposed levels.

II. Economic Literature on the Impact of Minimum Wage Increases on Employment

Next, it is necessary to review the economic literature on the impact of minimum wage increases on employment. Opponents often claim that minimum wage increases may reduce employment in a state. If that is true, then those employment reductions would result in reductions in state income and sales tax revenue. However, review of the most credible recent empirical research on the minimum wage shows that increases in the minimum wage have had no discernible impact on employment. We thus conclude that it is not appropriate to project that the proposed initiative petitions would result in any detectable employment reduction, and resulting losses in income and sales tax revenue, or increases in unemployment-related costs to the state.

Economists have conducted hundreds of studies of the employment impact of the minimum wage. A recent meta-study – a formal statistical study of studies – by Doucouliagos and Stanley (2009) reviewed all the research conducted over the last three decades on the employment impact of minimum wage increases on teenagers in the United States. The researchers concluded that the minimum wage has little or no discernible effect on the employment prospects of low-wage workers. Their study followed a rigorous, peer-reviewed procedure and has the advantage of using a set of predetermined, objective criteria for weighing the validity of statistical findings across studies with different results.

[2] We defined tipped workers as those employed in occupations that typically receive a large share of income as tips. These occupations were 'Bartenders' (4040), 'Waiters and Waitresses', 'Food Servers, Non-restaurant' and 'Miscellaneous food preparation and serving related workers including dining room and cafeteria attendants and bartender helpers'.

(Source: Doucouliagos, Hristos and T. D. Stanley. 2009. "Publication Selection Bias in Minimum-Wage Research? A Meta-Regression Analysis." British Journal of Industrial Relations,vol. 47, no. 2, pp. 406-428.)

Recent theoretical and empirical research emphasizes several explanations for the consistently negligible employment impacts of moderate increases in the minimum wage. First, relative to total wage costs, minimum-wage increases are small. Second, employers and workers appear to respond to minimum-wage increases in many ways that reduce the direct cost to employers and substantially reduce or eliminate the need to cut employment.

Probably the most important economic response to a higher minimum wage is a reduction in turnover. At higher wages, employers fill vacancies faster and retain employees longer, boosting total employment and average productivity per worker while reducing direct and indirect training costs. Dube, Lester, and Reich (2012), for example, examined the effect of the minimum wage on labor turnover among teens and restaurant workers. They find "...striking evidence that separations, new hires, and turnover rates for teens and restaurant workers fall substantially following a minimum wage increase..." (p. 2). Their findings, using nationally representative data, are consistent with local case studies of the minimum wage and related "living wage" laws, including Dube, Naidu, and Reich's (2007) analysis of the San Francisco city-wide minimum wage; Fairris's (2005) study of local government contractors in Los Angeles; Howes (2005) on homecare workers in California; and Reich, Hall, and Jacobs (2005) on workers at the San Francisco airport.
(Sources: Dube, Arindrajit, T. William Lester, and Michael Reich. 2012. "Minimum Wage Shocks, Employment Flows and Labor Market Frictions." Berkeley, CA: Institute for Research on Labor and Employment. http://escholarship.org/uc/item/76p927ks; Dube, Arindrajit, Suresh Naidu, and Michael Reich. 2007. "The Economic Effects of a Citywide Minimum Wage." *Industrial and Labor Relations Review*, vol. 60, no. 4, pp. 522-543; Fairris, David. 2005. "The Impact of Living Wages on Employers: A Control Group Analysis of the Los Angeles Ordinance." *Industrial Relations*, vol. 44, no. 1, pp. 84-105; Howes, Candace. 2005. "Living Wages and the Retention of Home Care Workers in San Francisco." *Industrial Relations*, vol. 44, 5 no. 1, pp. 139-163; Reich, Michael, Peter Hall, and Ken Jacobs. 2005. "Living Wage Policies at the San Francisco Airport: Impacts on Workers and Businesses." *Industrial Relations*, vol. 44, no. 1, pp. 106-138.)

Employers also appear to respond to increases in the minimum wage by taking measures to boost productivity. Hirsch, Kaufman, and Zelenska's (2011) study of the impact of the federal minimum wage increase on 81 fast-food restaurants in Georgia and Alabama, for example, asked fast-food managers about the scope for efficiency improvements in response to the minimum-wage rise. About 90 percent of managers indicated that they planned to respond to the minimum wage increase with increased performance standards such as "requiring a better attendance and on-time record, faster and more proficient performance of job duties, taking on additional tasks, and faster termination of poor performers." (p. 27) Roughly the same share of managers said that they sought to "boost morale" by presenting the minimum wage increase as a "challenge to the store" and using this as a way "to energize employees to improve productivity." (pp. 28-29) Based on their interviews with store managers, the researchers concluded that a minimum wage increase may function as a "catalyst or shock that forces managers to step out of the daily routine and think about where cost savings can occur." (p. 29) (Source: Hirsch, Barry T., Bruce Kaufman, and Tetyana Zelenska, "Minimum Wage Channels of Adjustment." IZA Discussion Paper No. 6132. Germany: Institute for the Study of Labor. http://www2.gsu.edu/~ecobth/IZA_HKZ_MinWageCoA_dp6132.pdf)

A higher minimum wage may also motivate workers to work harder, independently of any actions by employers to increase productivity. According to "efficiency wage" theory, wages above the competitive-market rate may elicit greater work effort for several reasons. As Carl Shapiro and Joseph Stiglitz (1984) have argued, higher pay increases the cost to workers of losing their job, potentially inducing greater effort from workers in order to reduce their chances of

being fired. George Akerlof (1982), arguing from a more sociological point of view, has suggested that workers may see higher wages as a gift from employers, leading workers to reciprocate by working harder. (Sources: Shapiro, Carl and Joseph E. Stiglitz. 1984. "Equilibrium unemployment as a worker discipline device." *American Economic Review*, vol. 74, no. 3, pp. 433-444; Akerlof, George A. 1982. "Labor contracts as partial gift exchange." *Quarterly Journal of Economics*, vol. 97, no. 4, pp. 543-569.)

We therefore conclude that the proposed increase in the Missouri minimum wage would have no discernible impact on the employment levels of low-wage workers. Accordingly, we do not factor in reductions in employment, or any resulting decrease in sales tax or income tax. We also do not project any increased unemployment insurance costs – both because we do not project any resulting job losses, and, additionally, because unemployment insurance costs are paid for by employer premiums, and so are ultimately not a cost to the state.

For similar reasons, we do not believe that the proposed increase will have any significant adverse economic impact on small businesses or, by extension, on corporate income tax revenue. In fact, many small businesses already pay little if any corporate income tax.

III. State and Local Sales and Personal Income Tax Revenue Impact of Raising the Minimum Wage

Based on the wage impact figures calculated above, and the understanding that the minimum wage increases would be unlikely to result in offsetting job losses, we next calculate the impact of the projected wage increases on state and local sales and personal income tax revenue in Missouri. We project only the direct impact of the various minimum wage increase scenarios on such tax revenue. We do not attempt to project the additional impact through a GDP multiplier effect, or the potentially higher sales taxes generated if employers offset wage increases with higher prices (which would be taxable).

Personal Income Tax Revenue. In order to determine the projected increase in personal income tax revenues that would result directly from the increased wages, we had to develop assumptions about the effective income tax rates of the affected workers. We made the following assumptions with respect to the effective tax rate:

1. That 25% of affected workers can be claimed as a dependent on another party's Missouri income tax return and, as a result, would pay an effective tax rate of 6.0% on the increase in income;
2. That 50% of the affected workers would file as single taxpayers, would claim one deduction of $2,100, and would be entitled to a standard deduction of $5,800. This would result in an effective tax rate of 2.47%;
3. The remaining 25% would, we assumed, pay no additional Missouri income tax.

In light of these assumptions, the increased Missouri income tax revenue for each petition version can be calculated as follows: (total wage increase * 25% * 6.0%) + (total wage increase * 50% * 2.47%) + (total wage increase *25% * 0%).

Sales Tax Revenue. The state of Missouri imposes a 4.225% state sales tax on those items that are not exempt from the sales tax base. In addition, the average local sales tax rate is 2.95%. As a result, the average Missouri net sales tax rate is 7.175%. To estimate the share of income that is spent on goods and services that are subject to sales taxes, we used data from the 2015 Consumer Expenditure Survey (CES) for the US to estimate the share of income spent on categories that are subject to sales taxes. The CES summary tables list average spending per consumer across 20 different

categories (e.g. housing, transportation, food away from home) and we categorized each spending item as taxable or non-taxable and then calculated the share of spending that we taxable.[3] The resulting rate was 30.3 percent.

Based upon the above assumptions, and the total wage increase calculations for each version of the petition, we estimate that the increase in state income tax revenue resulting from the increased wages would be as follows:

Table 2. Summary of the Impact of Minimum Wage Increases on State and Local Sales and Income Taxes in Year of Full Minimum Wage Final Implementation.

Proposal	State Sales Tax (4.225%)	Local Sales Tax Revenue (2.95%)	Total Sales Tax Revenue Increase	Personal Income Tax Revenue	Total Sales and Personal Income Tax Revenue Increase
13,14,15[a]	$55,814,587	$38,971,132	$94,785,719	$119,213,129	$213,998,848
16,17,18[a]	$53,902,025	$37,635,734	$91,537,759	$115,128,131	$206,665,889
19,20,21[a]	$67,986,272	$47,469,704	$115,455,976	$145,210,358	$260,666,334
22,23,24[a]	$42,860,248	$29,926,090	$72,786,338	$91,544,245	$164,330,583
25	$44,427,531	$31,020,406	$75,447,937	$94,891,770	$170,339,707
26	$57,754,393	$40,325,553	$98,079,946	$123,356,317	$221,436,263
27	$72,567,004	$50,668,086	$123,235,090	$154,994,242	$278,229,333
28	$54,915,882	$38,343,634	$93,259,516	$117,293,605	$210,553,122
29	$68,282,514	$47,676,548	$115,959,062	$145,843,095	$261,802,158
30	$58,369,444	$40,754,996	$99,124,440	$124,669,990	$223,794,430
31	$57,921,577	$40,442,285	$98,363,862	$123,713,402	$222,077,264
32	$73,565,624	$51,365,347	$124,930,970	$157,127,171	$282,058,141
33	$72,808,843	$50,836,944	$123,645,787	$155,510,781	$279,156,568

Note: Author's Analysis of American Community Survey (ACS) data from 2014 and fiscal impact assumptions described above. All dollars are in nominal figures. (a) Since these proposals only vary on non-economic factors, their economic and fiscal impacts are treated as equal for the purposes of this report.

As described in Table 2 above, the fiscal impact of the proposed minimum wage increases varies based on the ultimate level of the minimum wage and the degree of tipped minimum wage phase out. The estimates of the total fiscal benefit range from $164 million to $282 million annually. Appendix tables A1 through A13 provide a year-by-year summary of the fiscal benefits.

[3] Specifically, the categories we assumed to be subject to state and local sales taxes are: food, household furnishings and equipment, vehicle purchases, gasoline and motor oil, entertainment, and all other expenditures. We assumed that 50 percent of the spending on the category "apparel and services" was taxable.

We hope that this information is useful to your office as your prepare your analyses of the petitions.

Respectfully submitted,

Lara Granich

1) Total employed workers in 2014 from the ACS was estimated to be 2,795,876. This figure was inflated to each subsequent year based on the population projections in the State of Missouri between 2020 and 2030 (CAGR = 0.6%)

Robert Bonney, Chief Executive Officer of the Missouri Restaurant Association provided the following information as an opponent of this initiative petition.

These corrections were subsequently provided to the submitted information

In the table on the bottom of page 7 and top of page 8, both averages for 2023 should be based on a 5 year phase-in. Accordingly, the figure on that table should state for 2023 ($12) Average Annual Unemployment Premiums Paid by State of $16,269,523.52.

The corresponding change on the table on page 12 would be to state, for 2023 ($12) Total Net Loss to State Government from Taxes and Unemployment Insurance of ($19,137,851.76).

Re: Initiative Petitions 2018-196 through 2018-216

Dear Mr. Halwes,

I write on behalf of Robert Bonney. Mr. Bonney is the Chief Executive Officer of the Missouri Restaurant Association. Please consider this letter and the accompanying studies as his fiscal impact statement as an opponent of Initiative Petitions 2018-196 through 2018-216 (the "Initiative Petitions"). If passed, any of these twenty-one initiatives would have a substantial negative impact on state and local governments, as well as Missouri small businesses. Those effects are both direct (as noted in Section 1) and secondary (as noted in Sections 2 through 5). The direct effects stem from higher labor and contracting costs that the state and its political subdivisions will incur, despite the Initiatives' effort to exclude government workers from the mandate.

The indirect effects will present a debate this Office has seen before. The proponents of the Initiative Petitions will once again rely on data sourced from political activist groups who claim increases in the minimum wage only serve to create new taxable income. The reality is that such groups approach this issue with political bias. Their analysis is one-sided because it completely ignores the fact that a wage increase does not "create" income from thin air; instead, it is an economic transfer from Missouri businesses to workers. Missouri businesses must pay the new wages "created" by the increases. Political activists' models fail to account, then, for two specific manifestations of the "debit" side of this transfer: reductions in employment, and the reduction in corporate income tax paid based upon business done in Missouri.

The failure to account for any employment effect at any proposed wage increase—even a drastic increase of the minimum wage to $13—is particularly puzzling, because Missouri's most populous areas border Illinois and Kansas. These states, respectively, have minimum wages of $8.25 and $7.25. Neither state adjusts the minimum wage for inflation. Likewise, the second effect—loss of corporate income tax revenues—is a mathematical certainty. Missouri businesses will be the source of the wage increase, which will lower their own taxable income. Assuming a one-to-one substitution of "created" wages for lost corporate income, the difference in the rates

at which these two types of income are taxed will result in a net decrease in state revenue. A dollar from increased wages is taxable by state government in Missouri at 6% or substantially less, whereas Missouri's corporate income tax rate is 6.25%.

On top of these two types of negative outcomes—lower employment and lower state tax revenues—there may be second-order effects to small businesses because they lack the access to capital to weather price fluctuations; they may not survive at all because they may not have the flexibility to simply cut employment, shifting their reliance to capital instead of labor resources, or suffering a decrease in production and revenue.

In short, much of the fiscal impact regarding the current crop of wage-related ballot measures is secondary: they cause transfers of wealth within (or out of) the state economy, and those transfers of wealth then create second-order effects for state and local governments via their collection of tax revenues and provision of welfare services for the unemployed or less-employed. Because these fiscal notes call for the Auditor operate in the area of secondary effects, it is critical that she treat both sides of the wealth transfer equally, and refrain from assessing only one half of the wage increase equation.

1. Direct Labor Cost Impact on State and Local Government Budgets

As noted to the State Auditor's Office previously by Dr. David Macpherson, a nationally prominent labor and economics expert, there are two ways to measure labor cost on state and local government budgets. First, one can use the information included in fiscal note responses from state and local government entities. It is important to note that these fiscal notes provide an incomplete and, therefore, too-low estimate of labor cost. Few state and local government entities respond to requests for a fiscal note response, and those that do respond often ignore important effects.

Second, data from the U.S. Census Bureau's Current Population Survey (CPS) can be used to calculate increased labor cost to state and local government entities in Missouri. To combat this time-honored analysis, and in a blatant attempt to manipulate the fiscal note process, the Initiative Petitions provide that they will raise the minimum wage for private workers, but not for workers employed by state or local governmental entities. No conceivable justification exists for solely raising the minimum wage on private businesses. Whatever the disparity between the value of total compensation at a private business and at a government employer, that disparity does not approach the wage adjustments at issue here, ranging from an inflation adjusted wage increase of 51.16% (($13-$8.60)/$8.60) in Initiative Petitions 2018-198 through 2018-201 to a wage increase of 30.17% (($11-$8.45)/$8.45) in Initiative Petitions 2018-213 through 2018-215.

Moreover, it is unreasonable to assume that on a sustained basis public employers, as defined in the Initiative Petitions, would be able to maintain dramatically lower wage levels than private businesses. Public employers would lose staff employable at higher rates in the private market, imposing substantial costs on government productivity. Using the method traditionally employed by labor economists and followed by the Auditor's office, one can calculate the annual

wage costs to state and local governmental entities, based on the annual wage cost for each state and local government worker in the ORG CPS, as detailed on page 6 of Dr. Macpherson's 2012 report, attached hereto as **Exhibit A**. Even if the auditor finds that a specific estimate of costs is not determinable, the auditor should note that state and local government "operating costs could increase by an unknown annual amount that could be significant," through the form of higher wage costs and higher contracting costs.

The proponents of the Initiative Petitions may argue that the Auditor should abandon any state and local cost estimates altogether. The proponents will argue that provisions they have inserted in the statute would mean that state and local government entities will not have to pay higher wages to their employees. Setting aside unjustifiable discrimination against private employers (and "public employees"), the provision is of uncertain legal effect and constitutionality. A "public employer," defined in the initiatives as "the state or a political subdivision of the state" still incurs substantial costs for wages of individuals that are "private employees," rather than "public employees." Cleaning services, food service, and other essential services often rely on state contracts with outside vendors. Sometimes, a contract rate may vary depending on the cost of labor. Even if the contract rate is fixed, it must be re-bid periodically, and that bidding process would take into account the new minimum wage. Plainly, the initiative would impose higher costs for state and local governments in contracting with any private entity and its employees. As a matter of law, it would be insufficient and unfair for the Auditor's fiscal note or summary to simply assume that these costs to state and local governmental entities do not exist.

2. Cost of Unemployment Benefits

a) The effect of inflation on Missouri's minimum wage

CPS–ORG data show that between 2007 and 2015, median nominal wages for adult (25–59 years old) workers in the U.S. grew by 1.68 percent a year. However, Missouri's minimum wage is currently adjusted using "the percentage increase or decrease as of the preceding July over the level as of July of the immediately preceding year of the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W)." Section 290.502, RSMo. Coincidentally (or perhaps not), the CPI-W, over the period from 2006 to 2016, also increased at an average rate of 1.68 percent a year.

Year	CPI-W	Observed inflation %
2006	199.2	
2007	203.7	0.022590361
2008	216.304	0.061875307
2009	210.526	-0.0267124

2010	213.898	0.016017024
2011	222.686	0.041085003
2012	225.568	0.01294199
2013	230.084	0.02002057
2014	234.525	0.019301646
2015	233.806	-0.00306577
2016	234.771	0.004127353

Using Missouri's current inflation-adjusted minimum wage rate and an assumed, constant 1.68 percent increase in the CPI-W, the minimum wage in Missouri will be as follows:

Year	Estimated Minimum Wage
2016	$7.65 (observed)
2017	$7.70 (observed)
2018	$7.85
2019	$8.00
2020	$8.15
2021	$8.30
2022	$8.45
2023	$8.60
2024	$8.75
2025	$8.90
2026	$9.05

b) Calculating job loss attributable to increased minimum wage

At least one outside economist, James Sherk, has already provided an estimate for job loss in Missouri based on a $15 minimum wage. Mr. Sherk calculated the effect of a $15 minimum wage implemented in 2021. Mr. Sherk's figures accounted for inflation by estimating the present value of $15.00 in 2021, rather than estimating an absolute figure for wage inflation in Missouri. Mr. Sherk calculated the present value of $15.00 in 2021 to be $13.57, per hour, based on wage inflation of 1.68 percent. Mr. Sherk evaluated the change from $7.65 per hour to $13.57 per hour (a 77.39% increase), exclusive of agricultural workers. Cumulatively, Mr. Sherk calculated this 77.39 percent increase in wages to reduce employment in the affected workforce by (0.7739*0.677) 52.39%.

Graves Garrett LLC

Mr. Sherk calculated that approximately 40.9% of Missouri's Wage and Salary Workers would be affected by such a $15 minimum wage. Mr. Sherk's calculations reveal that a $15 minimum wage in 2021 would be expected to reduce the number of full-time equivalent jobs in Missouri by approximately 218,000. Based on CPS–ORG data, these figures reveal an affected workforce of approximately 416,086 workers impacted by a $15 minimum wage increase in 2021.

However, in 2014, Dr. Macpherson found, using more conservative, national-level Congressional Budget Office data, that an increase to a $10.10 minimum wage, effective January 1, 2015, would eliminate about 15,700 jobs in Missouri. Dr. Macpherson analyzed the effect of a Missouri $10.10 minimum wage using a model suitable to a national analysis. This analysis predicted a loss of 15,700 Missouri jobs based on a wage increase from $7.50 in 2014 to $10.10 in 2015 (a 34.67% increase).

On the whole, the analysis by Mr. Sherk is more instructive here, since it is more recent, Missouri-specific, and anticipates larger wage changes contemplated by the Initiative Petitions. The most accurate way to determine the estimate of Workers Affected would be to analyze the CPS–ORG data. However, without such data readily available in the time constraints imposed by the fiscal note process, it is reasonable for estimation purposes to assume Mr. Sherk's figures are evenly distributed. Assuming that worker data follows an equal distribution, the Initiative Petitions would be expected to result in the following job losses:

Year of final prescribed wage increase	Wage without IP	Wage mandated by IP	Percentage increase	Percentage of affected workers who lose jobs (Percentage Increase x 0.677 Elasticity)	Estimate of Workers Affected	Estimate of Missouri Workers Unemployed by Initiative
2021	$8.30	$11.00	32.53%	22.02%	174,897	38,512
2022	$8.45	$11.00	30.18%	20.43%	162,262	33,150
2022	$8.45	$12.00	42.01%	28.44%	225,866	64,236
2023	$8.60	$12.00	39.53%	26.77%	212,532	56,895
2023	$8.60	$13.00	51.16%	34.64%	275,061	95,281
2024	$8.75	$12.00	37.14%	25.15%	199,683	50,220
2024	$8.75	$13.00	48.57%	32.88%	261,136	85,861
2025	$8.90	$13.00	46.07%	31.19%	247,695	77,256
2026	$9.05	$13.00	43.65%	29.55%	234,683	69,349

c) The best estimate for a price elasticity of demand for low-skilled labor is -0.677.

As noted by Mr. Sherk, starting wages of $15.00 per hour mean that full-time employee must create at least $38,700 a year in value for his or her employer (including wages, employer payroll taxes, and mandatory healthcare benefits). High minimum wages and mandatory benefit costs make it much harder for less-experienced and less-skilled workers to find jobs, particularly full-time work.

Recent labor economics scholarship has revealed that, accounting for publication bias, a state-specific elasticity of demand for less-skilled workers is, on average, approximately -0.677, though some estimates are even higher, around -1.0.[1] "[E]conomists have extensively studied how businesses respond to higher wages overall, not just minimum-wage increases. On average these studies find a 10 percent increase in labor costs causes firms to reduce employment of less-skilled workers by 6.8 percent in the long run."[2]

While these elasticity estimates are substantial in absolute terms, there is reason to believe that such estimates might still understate the impact of a Missouri state-specific effort to increase the minimum wage. This is so for several reasons. First, traditionally, labor economists view labor as a reasonably difficult input to substitute; however, Missouri businesses have readily available options. There are relatively few barriers to doing business in Missouri's border states, and businesses can easily relocate across a state line to take advantage of more favorable wage (and tax laws). Additionally, substantially raising the cost for Missouri labor, relative to labor sources in other states and other countries, is likely to force many manufacturing jobs in Missouri to disappear entirely. Automation is also a significant risk. The substitution of labor is becoming increasingly easy due to technology advancements and the "sharing" economy, where fewer individuals are "employees" covered by the minimum wage. Finally, a labor "price shock" may result in significant decreases in the demand for goods and services. People make behavioral changes to avoid higher costs, including eating out less often and generally decreasing consumption (or shifting their activities to consumption involving comparatively low amounts of labor) wherever possible.

[1] Sherk, James, "How $15-per-Hour Minimum Starting Wages Would Affect Each State," The Heritage Foundation, http://report.heritage.org/ib4601.

[2] "The coefficients on these estimates imply an elasticity of –0.677 for a study published in 2012 (the most recent year in their data) of long-run unconditional labor demand for low-skilled labor in the U.S., estimated using industry-level administrative panel data and a structural form model." "Estimates that do not account for publication bias tend to slow a long-run elasticity closer to –1.0. See, for example, George Borjas, Labor Economics, 6th ed. (Columbus, OH: McGraw-Hill, 2013), Chapter 4: 'The evidence also suggests that the estimates of the long-run labor demand elasticity cluster around –1, so the long-run labor demand curve is indeed more elastic than the short-run curve.' " Sherk, available at http://report.heritage.org/ib4601.

Graves Garrett LLC

d) Unemployment Benefit Costs

We derived an average unemployment payout by calculating the expected weekly unemployment benefit amount. Based on current data, the expected unemployment weekly benefit amount of a worker making $7.65 an hour, on a 40 hour workweek, is $159.12 per week, for 20 weeks.[3] The expected unemployment weekly benefit amount of a worker making $10.99 an hour is $228.59 per week. The expected unemployment weekly benefit amount of a worker making $11.99 an hour is $249.39 per week. The expected unemployment weekly benefit amount of a worker making $12.99 an hour is $270.19 per week. We assume that workers will seek unemployment insurance for the full twenty weeks authorized under Missouri law, because unemployment attributable to an increase in the minimum wage is structural. In this case, structural unemployment occurs because workers' job skills do not meet the established "price floor" of labor, rendering the worker's skills unmarketable. Assuming an even distribution of workers affected, the average unemployment benefit cost to the state for a worker is calculated as follows:

- For Initiative Petitions 2018-213 through 2018-216, [($159.12+$228.59)/2]*20 = $3,877.10
- For Initiative Petitions 2018-196, 2018-197, 2018-200, 2018-202, and 2018-204 through 209, [($159.12+$249.39)/2]*20 = $4,085.10
- For Initiative Petitions 2018-198, 2018-199, 2018-201, 2018-203, 2018-210 through 2018-212, [($159.12+$270.19)/2]*20 = $4,293.10

Consistent with Dr. Macpherson's 2012 report, it would be reasonable for the Auditor to assume that 35% of unemployed workers will receive unemployment benefits. Combining these numbers leads to the following estimates:

Year of final prescribed wage increase	Estimate of Missouri Workers Unemployed by Initiative	Estimated Unemployment Amount Per Worker	Estimated Total Unemployment Premiums Paid	Average Annual Unemployment Premiums Paid by State
2021 ($11)	38,512	3,877.10	$52,260,206.32	$17,420,068.77
2022 ($11)	33,150	3,877.10	$44,984,052.75	$11,246,013.19
2022 ($12)	64,236	4,085.10	$91,843,669.26	$22,960,917.32
2023 ($12)	56,895	4,085.10	$81,347,617.58	$20,336,904.39

[3] https://labor.mo.gov/DES/Claims/calculator. A 2015 law decreased the unemployment benefit period from 20 weeks to 13 weeks, but the Supreme Court of Missouri struck down the law in July 2016.

2023 ($13)	95,281	4,293.10	$143,167,801.39	$28,633,560.28
2024 ($12)	50,220	4,085.10	$71,803,802.70	$11,967,300.45
2024 ($13)	85,861	4,293.10	$129,013,450.69	$21,502,241.78
2025 ($13)	77,256	4,293.10	$116,083,706.76	$16,583,386.68
2026 ($13)	69,349	4,293.10	$104,202,767.17	$13,025,345.90

3. Impact on State Income Tax Revenue

The 2012 analysis prepared by Dr. Macpherson may also be used as a reference in calculating the effect of the initiative petitions on state income tax revenue. Here, again, it is reasonable to assume that our "affected workers" are evenly distributed, though precise CPS–ORG data would also provide a reliable estimate. Here, the increased income tax revenue is the additional income tax paid by workers whose wages increase. There is a loss of revenue, however, in the form of decreased income tax paid by workers whose wages decrease and businesses who absorb the increased cost of labor, rather than passing it along to customers.

For the purposes of these estimates, we assume that workers work 40 hours a week and 52 weeks per year:

Year of final prescribed wage increase	Estimate of Workers Affected	Estimate of Missouri Workers Unemployed by IP	Estimate of Missouri Workers with Increased Wages	Annual Increase in Wages Paid to Workers who get Wage Increase in Final Year	Annual Decrease in Wages Paid to Workers now Unemployed
2021 ($11)	174,897	38,512	136,385	$382,969,080.00	$108,141,696.00

2022 ($11)	162,262	33,150	129,112	$342,405,024.00	$87,913,800.00
2022 ($12)	225,866	64,236	161,630	$596,737,960.00	$237,159,312.00
2023 ($12)	212,532	56,895	155,637	$550,332,432.00	$201,180,720.00
2023 ($13)	275,061	95,281	179,780	$822,673,280.00	$436,005,856.00
2024 ($12)	199,683	50,220	149,463	$505,184,940.00	$169,743,600.00
2024 ($13)	261,136	85,861	175,275	$774,715,500.00	$379,505,620.00
2025 ($13)	247,695	77,256	170,439	$726,750,021.03	$329,419,584.00
2026 ($13)	234,683	69,349	165,334	$679,192,072.00	$284,885,692.00

These net wage increases will lead to corresponding increases in state income tax collections. Traditionally, it has been assumed that about 50% of affected workers will pay 6% income tax, while the other 50% of workers pay no state income tax. This assumption may be less accurate at the higher wage increases contemplated by the Initiative Petitions. Accordingly, figures are also displayed assuming that about 75% of affected workers will pay 6% income tax, while the other 25% of workers pay no state income tax.

Annual Net Increase in Wages Paid To Workers	Annual Income Tax Increase from Wage Increase (50% pay tax)	Annual Income Tax Increase from Wage Increase (75% pay tax)
$274,827,384.00	$8,244,821.52	$12,367,232.28
$254,491,224.00	$7,634,736.72	$11,452,105.08
$359,578,648.00	$10,787,359.44	$16,181,039.16
$349,151,712.00	$10,474,551.36	$15,711,827.04
$386,667,424.00	$11,600,022.72	$17,400,034.08
$335,441,340.00	$10,063,240.20	$15,094,860.30
$395,209,880.00	$11,856,296.40	$17,784,444.60
$397,330,437.03	$11,919,913.11	$17,879,869.67
$394,306,380.00	$11,829,191.40	$17,743,787.10

Graves Garrett LLC

Based on these figures, Missouri businesses must also decide whether to pass along any increase in wage costs (wages and mandatory payments).[4]

Year of final prescribed wage increase	Annual Cost to Business from Increased Wage	Annual Decreased Corporate Income Tax if cost is fully absorbed	Annual Decreased Corporate Income Tax if cost is 50% absorbed
2021 ($11)	$412,266,214.62	$25,766,638.41	$12,883,319.21
2022 ($11)	$368,599,008.34	$23,037,438.02	$11,518,719.01
2022 ($12)	$642,388,413.94	$40,149,275.87	$20,074,637.94
2023 ($12)	$592,432,863.05	$37,027,053.94	$18,513,526.97
2023 ($13)	$885,607,785.92	$55,350,486.62	$27,675,243.31
2024 ($12)	$543,831,587.91	$33,989,474.24	$16,994,737.12
2024 ($13)	$833,981,235.80	$52,123,827.23	$26,061,913.62
2025 ($13)	$782,346,397.64	$48,896,649.85	$24,448,324.93
2026 ($13)	$731,150,265.50	$45,696,891.59	$22,848,445.80

Assuming businesses absorb half of the cost of increased wages, and 75 percent of affected workers pay the new, higher taxes, the effect on state income tax collections is estimated to be:

Year of final prescribed wage increase	Annual Net Income Tax Revenue Loss
2021 ($11)	($516,086.93)
2022 ($11)	($66,613.93)
2022 ($12)	($3,893,598.78)
2023 ($12)	($2,801,699.93)
2023 ($13)	($10,275,209.23)
2024 ($12)	($1,899,876.82)
2024 ($13)	($8,277,469.02)
2025 ($13)	($6,568,455.26)
2026 ($13)	($5,104,658.70)

[4] A healthcare benefit cost estimate is not available based on the time limitations imposed by this fiscal note.

Graves Garrett LLC

4. Sales tax revenue gain or loss

Projecting any increase in sales tax revenue resulting from an increased minimum wage would require the auditor's office to conclude, based on data separate and apart from the sheer conjecture typically offered by political activist groups: (1) the net effect on consumer disposable income and (2) the percentage of a consumer's disposable income that is spent on goods subject to the sales tax, taking into consideration that the scope of Missouri's sales tax has been truncated by a voter-approved constitutional amendment from November 2016.

Typically, the Auditor's office multiplies the total increase in worker earnings (which should be adjusted for employment reductions) and multiplies the result by 25 percent, then multiplying that figure by the Missouri the population weighted combined average state and local sales tax in Missouri, 7.81%.[5] Based on this estimate, the population-weighted combined average local sales tax is 3.585%.

However, it would be deceptive to fail to account for sales tax losses from workers whose wages are eliminated or sales tax losses from reduced business profits (attributable to the higher wages paid), which will lower spending by business owners. The first figure is calculable by determining the total annual wages (adjusted for employment deductions) for all workers who lose jobs due to a minimum wage hike, multiplied by 25 percent. The second number is calculable by multiplying the total increase in worker earnings (multiplied by 1.0765 to account for Social Security and Medicare taxes) by approximately 15 percent.[6]

Year of final prescribed wage increase	Annual Net Increase in Wages Paid To Workers	New Wages Spent on Sales Tax Items	Annual Cost to Business from Increased Wage	Annual Business Income No Longer Included in Sales Tax Base (50% passed-through)
2021 ($11)	$274,827,384	$68,706,846	$412,266,214.62	($61,839,932)
2022 ($11)	$254,491,224	$63,622,806	$368,599,008.34	($55,289,851)
2022 ($12)	$359,578,648	$89,894,662	$642,388,413.94	($96,358,262)
2023 ($12)	$349,151,712	$87,287,928	$592,432,863.05	($88,864,929)

[5] http://taxfoundation.org/sites/taxfoundation.org/files/docs/LOST--2015.png.
[6] This estimate would also need to be adjusted to reflect certain employers' mandate under the Affordable Care Act to provide healthcare coverage and pay 60 percent of such coverage.

2023 ($13)	$386,667,424	$96,666,856	$885,607,785.92	($132,841,168)
2024 ($12)	$335,441,340	$83,860,335	$543,831,587.91	($81,574,738)
2024 ($13)	$395,209,880	$98,802,470	$833,981,235.75	($125,097,185)
2025 ($13)	$397,330,437	$99,332,609	$782,346,397.64	($117,351,960)
2026 ($13)	$394,306,380	$98,576,595	$731,150,265.51	($109,672,540)

Accordingly, the annual estimations of the effects on state and local revenue, and total state economic impact are as follows:

Year of final prescribed wage increase	Annual Net Income Tax Revenue Loss	Annual Net Effect on State Sales Tax	Total Annual Effect on State Tax Revenue	Total Net Loss to State Government from Taxes and Unemployment Insurance	Annual Net Effect on Local Sales Tax
2021 ($11)	($516,086.93)	$290,127.11	($225,959.82)	($17,646,028.59)	$246,178.86
2022 ($11)	($66,613.93)	$352,067.34	$285,453.41	($10,960,559.78)	$298,736.43
2022 ($12)	($3,893,598.78)	($273,087.10)	($4,166,685.88)	($27,127,603.19)	($231,720.06)
2023 ($12)	($2,801,699.93)	($66,628.31)	($2,868,328.24)	($23,205,232.64)	($56,535.50)
2023 ($13)	($10,275,209.23)	($1,528,364.68)	($11,803,573.91)	($40,437,134.18)	($1,296,849.08)
2024 ($12)	($1,899,876.82)	$96,566.47	($1,803,310.36)	($13,770,610.81)	$81,938.65
2024 ($13)	($8,277,469.02)	($1,110,951.72)	($9,388,420.74)	($30,890,662.52)	($942,665.55)
2025 ($13)	($6,136,139.31)	($761,317.55)	($6,897,456.87)	($23,480,843.55)	($645,993.71)
2026 ($13)	($5,104,658.70)	($468,803.67)	($5,573,462.37)	($18,598,808.26)	($397,789.62)

5. Damage to small business

Additionally, any proponent or opponent fiscal note submission is required, pursuant to Missouri law, to state the impact of the initiative on small businesses. According to analysis by the Employment Policies Institute, 40 percent of the minimum wage workforce is employed at businesses with fewer than 50 employees. [7] The impact on extra costs to small business may be more significant than even this 40% figure suggests. Small businesses are more easily shut down by input price increases than large businesses, which have greater access to capital to weather the

[7] https://www.epionline.org/oped/who-really-employs-minimum-wage-workers/

storm. Clearly, small businesses that do not shut down due to increases in the minimum wage will pay higher costs, estimated at about 40% of business' total increased costs, described above.

Conclusion

In conclusion, the State Auditor should attempt to quantify the increased cost to be borne by state and local government entities through increased contracting costs as a result of an increase to the minimum wage. This direct cost is outlined in Section 1.

Indirect costs are outlined in Sections 2 through 5, and show a net loss. Although such second-order effects more difficult to predict, a net loss is easily the most likely outcome. Significantly, this result is only obtainable if the Auditor reviews both the "credit" and "debit" sides of the transfer of wealth from businesses to workers. The Auditor should refrain from taking the proponents' likely invitation to consider and present only the "credit," side, and should attempt to provide a complete picture of all effects of a minimum wage increase, including the loss of revenue to state and local governments from individuals who lose employment. Only conveying (or quantifying) the potential for gain, without fairly conveying the likelihood of net loss, would be deceptive and unfair.

The State Auditor's previous 2018 fiscal notes are a good model. Each of the fiscal notes for the Initiative Petitions should follow the already-established format and state that:

> "[O]perating costs could increase by an unknown annual amount that could be significant. State and local government tax revenue could change by an unknown annual amount ranging from a $## million decrease to a $## million increase depending on business decisions."

Should you desire further detail or have any questions about this fiscal impact statement, please do not hesitate to contact me.

ABOUT THE MISSOURI RESTAURANT ASSOCIATION

With origins dating back to 1916, the Missouri Restaurant Association (MRA) is a statewide trade association representing over 1,500 member establishments. The association's membership is diverse, and includes full service, fast casual, and quick service restaurants, cafeterias, hotels, schools, institutions, contract feeders, and ancillary foodservice providers such as theme parks. The association has been successful in securing support from virtually every segment of the foodservice and hospitality industry.

MRA includes seven chapters as extensions of the parent organization, each with its own Officers, Board of Directors, and limited budget. The association is governed by a Board of Directors comprised of five Officers, 33 Directors, and each President of the seven affiliated chapters.

MRA is dedicated to serving the needs of the foodservice and hospitality industry, enhancing and improving its growth and development, assisting and educating its members in operating more effectively, improving the political and social environment in which the industry conducts business, for the benefit of its members, patrons, employees, and the well-being of the community.

David A. Macpherson is the E.M. Stevens Professor of Economics at Trinity University. He received undergraduate and doctoral degrees in economics from Pennsylvania State University.

Dr. Macpherson has published over 60 articles in leading economics and real estate journals including Review of Economics and Statistics, Industrial and Labor Relations Review, Journal of Labor Economics, Journal of Human Resources, and Journal of Real Estate Economics and Finance. His research has been funded by a variety of entities including the National Science Foundation, Florida Legislature, and the National Association of Realtors. He is co-author of the undergraduate labor economics text, Contemporary Labor Economics, as well as the principles of economics text, Economics: Private and Public Choice. He is included in Who's Who in Economics, Fourth Edition, which includes the 1,200 most frequently cited economists.

THE IMPACT OF A $10.10 MINIMUM WAGE ON JOBS AND TAXPAYER COSTS IN MISSOURI

June 2014

Economic Analysis by **Dr. David Macpherson**
Trinity University

Index

Executive Summary 4
Results 5
Technical Appendix 7

EXECUTIVE SUMMARY

Missouri's minimum wage of $7.50 is linked to rise in most years with the inflation rate. But some state legislators and labor unions would like to raise that figure even higher. For instance, a recent labor union-organized bus tour in the state promoted a $10.10 minimum wage in St. Louis.

Proponents have enthusiastically pointed to the benefits of the $10.10 policy. But there's been far less discussion of the costs involved with a $10.10-an-hour minimum wage—both the cost on employment, and the cost to taxpayers.

In this study, labor economist David Macpherson of Trinity University uses Census Bureau data to estimate the impact on Missouri's labor market and budget from raising the minimum wage to $10.10 an hour. He also provides separate results for the St. Louis metropolitan area.

Dr. Macpherson's employment estimates follow the methodology used by the nonpartisan Congressional Budget Office in its report earlier this year estimating the impact of a $10.10 minimum wage nationwide, which in turn relied on 60 different empirical studies to formulate its estimates.

Statewide, he finds that over 15,000 jobs would be lost at the $10.10 wage level—with 9,300 of those jobs being held by women. In the St. Louis metropolitan area, approximately 4,800 jobs would be lost from a $10.10 minimum wage.

The cost to taxpayers would be significant: There are approximately 40,000 state and local employees whose wages would be affected by the $10.10 increase in Missouri, for a combined cost to taxpayers of $87 million annually.

Raising wages is an admirable goal, but the evidence suggests that accomplishing this goal with a blunt wage mandate could do more harm than good.

RESULTS

The minimum wage is one of the most hotly-debated topics in the political world. Some legislators claim that a higher base wage will stimulate the economy; others claim that it will reduce jobs when affected employers can't offset the higher costs through higher prices.

Economists, who have studied the issue since the late 1940s, tend to take a skeptical view of minimum wage increases. Since the early 1990s, for instance, roughly 85 percent of the most credible research on the minimum wage points to job loss for less-skilled groups. The nonpartisan Congressional Budget Office (CBO), in an evaluation of President Obama's proposed $10.10 minimum wage increase, reviewed 60 different studies and concluded that the policy would eliminate 500,000 jobs if enacted.

The estimates that follow, of the employment impact of a higher minimum wage on Missouri's labor market, were performed by Dr. David Macpherson of Trinity University. Dr. Macpherson followed closely the methodology used by the CBO in its 2014 report. Dr. Macpherson also estimates the taxpayer costs of a higher minimum wage, as many state and local public employees will see their earnings increase when the minimum wage rises.

Dr. Macpherson's methodology is presented in detail in a technical appendix.

Estimated Employment Effects of a $10.10 Minimum Wage in Missouri

Statewide, Dr. Macpherson finds that increasing the minimum wage to $10.10 would eliminate over 15,000 jobs—approximately 60 percent of which are jobs held by women. The bulk of the job losses would be concentrated among individuals with a high school degree or less, and among people who work in the retail or leisure & hospitality industries.

(Note: Totals have slight discrepancies due to rounding.)

City-Specific Minimum Wage Employment Impacts

The city of St. Louis has been the subject of a number of protests calling for a higher minimum wage. Dr. Macpherson analyzed the employment impact of a $10.10 minimum wage in the St. Louis metropolitan area, providing breakouts by gender and education where the data permits. He estimates that the wage hike would eliminate approximately 5,000 jobs—just over half of which would be jobs held by women.

Missouri Taxpayer Costs of a $10.10 Minimum Wage

Dr. Macpherson estimates that approximately forty thousand state & local public employees would be affected by a minimum wage increase to $10.10 an hour. These additional wage costs translate to new costs for state and local taxpayers. Following the methodology described in detail in the technical appendix, Dr. Macpherson estimates both the straight wage cost of a $10.10 minimum wage, as well as the total compensation cost with Social Security, Medicare, workers compensation, and unemployment insurance included. Statewide, taxpayers would shoulder an additional $87 million in costs if the base wage was increased to $10.10 an hour and public employees were covered by the new wage.

Missouri Taxpayer Costs of a $10.10 Minimum Wage	
# of State & Local Workers	304,588
# Affected By $10.10 MW	40,103
Annual Wage Cost	$79,629,374
Annual Compensation Cost	$87,004,355

Note: Annual compensation costs include the cost of worker's compensation, FICA, and unemployment insurance benefits.

TECHNICAL APPENDIX

Estimating Employment Loss and the Cost to State and Local Government of an Increase in the Minimum Wage

Dr. David Macpherson
E.M. Stevens Professor of Economics
Trinity University

This paper describes how we estimate the employment loss and the cost to state and local governments of a proposed increase in the minimum wage effective on January 1, 2015.

Data and Sample

First, we use data from the Current Population Survey (CPS) Outgoing Rotation Groups (ORG) from January 2011 through December 2013. For each worker in the sample, we calculate their wage rate. We also adjust the wage rate to reflect a forecast of wages in 2015. This is done in two steps. First, based on legislation enacted as of April 2014, we estimate the minimum wage that would be in effect in January 2015 for each state and city that we consider. If a state or city has an indexed minimum wage, we increase the January 2014 state or city minimum wage by the Congressional Budget Office (CBO) inflation forecast for 2014 of 1.7%.

Since we use data from 2011 through 2013, we also follow the CBO approach for forecasting what the wage distribution would be in 2015. This is done in two steps. First, we adjust wages observed prior to 2013 to reflect 2013 minimum wage legislation. For example, if the minimum wage in a state was $7.25 in 2011 and grew to $8.00 by 2013, anyone who earned between $7.25 and $8.00 in 2011 would have their wage increased to $8.00. After wages are adjusted to 2013 levels, we assume that all wages grow by 2.9% in 2014. Using the resulting 2015 distribution of wages, we adjust for minimum wage legislation that would increase the minimum between 2013 and 2015. Anyone earning a wage between the 2013 and 2015 minimum wage is assigned a wage matching the 2015 minimum wage.

After generating the forecast 2015 distribution of wages reflecting wage growth and existing minimum wage legislation, we identify workers who would be affected by additional changes to the 2015 minimum wage as those with wages between the predicted minimum wage legislated for 2015 (or up to $.25 below it) and the proposed minimum.

To estimate the number of affected workers, we take two steps. First, for each state, we estimate the number of affected workers for 2013. Second, we adjust the weights in the 2011 and 2012 data so that the state-specific number of affected workers implied by the 2011 and 2012 data matches that for 2013. This adjustment is designed to correct for the changing economic climate as the economy recovers from the great recession and to generate estimates that are as close as possible to the most recent data (2013). After we adjust the 2011 and 2012 weights, we estimate the number of affected workers by summing their earnings weights and dividing the total by 36 (the number of months of data).

[1] Also, following CBO, anyone earning up to $.25 less than the 2011 minimum wage would have their wage increased by the amount that the minimum wage increased (i.e. a $7.00 wage would be increased to $7.75 in this example). This approach is used to adjust for the fact that many workers round their answers when asked about their wage.

TECHINCAL APPENDIX CONTINUED

Employment Loss

To estimate employment loss, for each affected worker we compute:

L = e *(Proposed Min Wage /Min Wage 2015 – 1)

where e is an assumed elasticity of employment with respect to changes in the minimum wage, Min Wage 2015 is the minimum wage currently legislated for 2015, and Proposed Min Wage is the minimum wage that is being proposed for 2015. Thus, for example, if a worker is projected to earn the federal minimum of $7.25 in 2015, the expected reduction in employment resulting from a $10.10 minimum wage in 2015 if e=.45 is .45*(10.10/7.25 – 1) = .18. That is, for every 100 workers currently earning the federal minimum, the expectation is that 18 would lose a job if the minimum wage elasticity is .45.

To estimate the aggregate employment loss in the economy, we use earnings weights to sum L across workers. We also follow the Congressional Budget Office (2014) and use an elasticity of 0.15 for non-teenagers and 0.45 for teenagers.

Cost to State and Local Government

We use the same data to estimate the cost to state and local government of a proposed minimum wage hike. We apply the same definition of affected workers described above and estimate the number of state and local government workers affected by a minimum wage hike. We do not, however, assume that there is any job loss for state and local workers as we do not have an appropriate elasticity estimate specific to state and local workers. To the extent that state or local governments reduce hours or employment in response tothe minimum wage hike, our estimate of the cost of the hike would be overstated.

To estimate the increase in annual payroll cost resulting from an increase in the minimum wage, we estimate the increase in annual cost for each worker as:

(Proposed Min Wage-Min Wage 2015)*weekly hours*52

We then multiply the increase in annual cost by the earnings weight for each worker and sum across workers. Since an increase in wages also requires increased employer contributions for Social Security, Medicare, workers' compensation and unemployment insurance, we apply an estimate of the payroll tax rate for these mandatory programs to calculate the additional cost for these programs.

For each state and city considered, we provide tables summarizing the number of affected workers, employment loss, and the distribution of employment loss by sex, education, race, age and industry. Given that we use three years of data, a rule of thumb for minimum sample size required to achieve a reasonably accurate estimate of the employment loss is to require at least 30,000 people be in the relevant category. For example, if there are fewer than 30,000 people projected to be in a particular industry category, the Bureau of Labor Statistics would not report the estimate due to a lack of reliability based on the variance of the estimate relative to its mean.

In addition to the estimate of employment loss, for each state or city considered, we estimate the number of state and local workers that would be affected by the minimum wage hike and the total annual cost to government in terms of wages and total compensation. As with the employment estimates, we advise caution in interpreting estimates that are based on fewer than 30,000 affected workers.

[3] Congressional Budget Office, "The Effects of a Minimum-Wage Increase on Employment and Family Income," February 2014.

[4] For workers paid by the hour the reported hourly wage was used. For workers who are not paid by the hour, we calculate the hourly wage by dividing usual weekly earnings by usual weekly hours. Overtime pay was calculated as time and one-half for hours above 40 hours for hourly workers.

[5] The assumed payroll tax for Medicare and Social Security is 7.65 percent. To estimate the payroll tax for workers' compensation and unemployment insurance, we use unpublished data from the 2010 Employer Cost of Employee Compensation database for state and local workers in the relevant region in 2010.

FISCAL ANALYSIS
OF
PROPOSED STATUTORY INITIATIVE PETITIONS 2012-084 AND 2012-085

Prepared for

Victor Allred versus Robin Carnahan and Thomas Schweich
Circuit Court of Cole County, Missouri

FISCAL ANALYSIS
OF
PROPOSED STATUTORY INITIATIVE PETITIONS 2012-084 AND 2012-085

I. Introduction

This report was undertaken at the request of counsel representing plaintiffs in the case of Victor Allred versus Robin Carnahan and Thomas Schweich. As part of the basis of the lawsuit, the plaintiffs allege that the fiscal note summaries for proposed statutory initiative petitions 2012-084 and 2012-085 are insufficient and unfair. I was asked by counsel to evaluate the fiscal impact of proposed statutory initiative petitions 2012-084 and 2012-085.

The results of my analysis indicate:

(1) labor costs to state and local government entities, based on state auditor fiscal notes, will rise by more than $1,352,182. A more inclusive estimate indicates that state and local government labor costs will increase by $16,003,712;

(2) unemployment benefit costs will rise by $4,397,510 during the first year of the minimum wage increase;

(3) individual income tax revenue will rise by at most $4,078,088;

(4) the loss in corporate income tax revenue could be as high as $9,243,105;

(5) state and local sales tax revenue will rise by at most $2,919,327;

(6) during the first year: state and local governments will incur increased costs of $20,401,222; the change in state and local government revenue will

range from -$2,245,690 to +$6,997,415; and the net state and local government fiscal impact will range from -$22,646,912 to -$13,403,807.

The report is organized as follows. My qualifications to prepare this report are contained in Section II. Section III describes the data and records I relied upon for this report. Section IV reviews the estimated fiscal impact of proposed statutory initiative petitions 2012-084 and 2012-085. A summary and my conclusions are provided in Section VI.

II. Qualifications

I am currently the E.M. Stevens Professor of Economics at Trinity University in San Antonio, Texas. Previously, I was employed by Florida State University as Director of the Pepper Institute on Aging and Public Policy and the Rod and Hope Brim Eminent Scholar in Economics. I have taught both undergraduate and graduate Econometrics (statistical analysis of economic data), and Labor Economics. I have published over 50 articles in peer-reviewed professional journals.

I am currently serving on the editorial board of the *Journal of Forensic Economics*, which is a peer-reviewed journal. I have also served as a reviewer or 'referee' for 24 peer-reviewed journals, including the *Journal of Human Resources, Journal of Labor Economics, Quarterly Journal of Economics,* and the *Review of Economics and Statistics*. Based upon these experiences, I am very familiar with the scholarly and professional research process and the concept of peer review.

I have prepared numerous analyses and reports that use statistical methods as applied to specific questions. I have been responsible for developing the techniques and approaches required for these analyses. I routinely use computers and statistical software packages to assist me in my analytical work. I have been qualified as an expert witness on statistical analysis of employment discrimination and economic damages in state courts in Florida and Georgia and Federal Courts, and I have given expert testimony. I have prepared analyses and offered testimony on behalf of both plaintiffs and defendants.

Details of my qualifications are reflected in my current resume and legal cases, attached as Appendix A to the report.

III. Data and Records

I reviewed the following materials in preparing this report.

- Plaintiff's Complaint
- Material cited in footnotes below.

IV. Fiscal Impact

A. Overview

The proposed statutory initiative petitions 2012-084 and 2012-085 contain many elements in common. Both initiatives would increase the Missouri minimum wage to $8.25 per hour, alter the exemption for retail and service firms, raise the cash wage of tipped workers from 50% to 60% of the minimum wage, and increase the statute of limitation from two to three year for underpayment claims.

The initiatives differ in their linkage to the federal minimum wage. Initiative petition 2012-084 requires that the state minimum wage be automatically increased to the

federal minimum wage if it is higher than the state minimum wage. Initiative petition 2012-085 does not have such a linkage. It only requires that workers be paid the higher of the state minimum wage or the federal minimum wage. The linkage to the federal minimum wage will cause the state minimum wage to be higher under initiative petition 2012-084 over time. This is because the state minimum wage, in contrast to the federal minimum wage, is adjusted for inflation as measured by the Consumer Price Index.

An increase in the minimum wage in Missouri will affect state and local government entities in two ways. First, it will directly increase the cost of labor to state and local government entities. This will occur due to the increase in wages of state and local government workers earning between the existing minimum wage of $7.25 and the new minimum wage of $8.25.[1] In addition, workers laid off due to the minimum wage increase can collect unemployment benefits. The state government will bear the cost of unemployment benefits of these workers for the first 20 weeks. Second, state and local government may gain increased revenue through higher income tax and sales taxes paid by workers affected by the minimum wage who remain employed. However, state and local government will suffer reduced tax revenue to the extent the higher wage cost lowers profits of businesses.

The following sections estimate the cost and revenue effects to state and local government entities of the proposed minimum wage increase.

[1] Information about the minimum wage in Missouri is available at http://www.labor.mo.gov/DLS/minimumwage/.

B. Direct Labor Cost Impact on State and Local Government Budgets

There are two possible ways to measure the direct labor cost on state and local government budgets. First, one can use the information included in the fiscal notes prepared by the State Auditor regarding the proposed initiatives. It is important to note that the fiscal notes provide an incomplete and thus too low estimate of the direct labor cost. The fiscal notes indicate that the Office of Administration's (OA) Division of Personnel reported that as of September 2011 there were 834 state workers who would be affected by an increase of the minimum wage to $8.25 and the "approximate annual cost" would be more than $540,000.

This OA estimate excludes seasonal workers such as State Fair employees, State Parks Employees, and tax season staff. The Division of Revenue noted its labor cost would rise by $40,000. The Division of Natural Resources stated they have over 500 workers who would be affected by the increase, but did not provide an estimate of the cost. The State Fair hired 745 workers that would be affected, but no cost estimate was provided.

Thus, the cost to state government, based on the fiscal notes, would be more than $580,000.

The fiscal notes also provide an incomplete and thus too low measure of the cost to local government and public educational institutions. Many cities and educational institutions did not respond to Office of Auditor's survey or provide an estimate of the cost of the higher minimum wage. The City of Columbia, City of Jefferson, City of

Joseph, Linn State Technical College, and Metropolitan Community College did provide such an estimate. The total cost to these five institutions is $772,182.

Based on the fiscal notes, the cost to state and local government entities of the increase in the minimum wage to $8.25 will be more than $1,352,182.

Second, data from the U.S. Census Bureau's Current Population Survey (CPS) can also be used to calculate the cost of the increased labor cost to state and local government entities in Missouri. Using the data from January 2010 to December 2011 Outgoing Rotation Group (ORG) CPS, I calculated that 17,089 state and local government workers would be affected by the minimum wage increase. I defined affected workers as those individuals earning between $7.00 and $8.24 per hour. Though the minimum wage was $7.25 per hour during this period, I also included those workers reporting earnings of $7.00 to $7.24 since some individuals may round their wage rate. I calculated the annual wage cost for each state and local government worker (i) in the ORG CPS as:

$$Annual\ Wage\ Cost_i = (\$8.25 - current\ wage_i) * weekly\ hours_i * 52.$$[2]

The average annual wage cost increase was $870. I summed the cost over each worker (i) to obtain the total wage cost to state and local government entities in Missouri of $14,866,430.

The increased wage cost is not the only labor cost to state and local government entities of the minimum wage increase. Employers are required to pay 7.65% of their wage costs in Social Security and Medicare taxes. Thus, the total labor cost of the minimum wage increase will be 1.0765 times $14,866,430 or $16,003,712.

---

[2] I assume that persons reporting an hourly wage rate between $7.00 and $7.24 are actually earning $7.25 per hour.

C. Unemployment Benefit Impact

The higher minimum wage will cause firms to reduce their level of employment.[3] As a result, the number of unemployed workers will increase. Thus, another important fiscal cost of the minimum wage increase is the cost of the unemployment insurance benefits for the workers laid off as a result of the minimum wage increase.

To calculate the cost to the unemployment benefits program, I first calculated the number of workers laid off. To do so, I calculated a probability of job loss for each affected Missouri worker (i) in the January 2010 to December 2011 ORG CPS:

$$Probability\ Job\ Loss_{\ i} = \frac{(\$8.25 - Current\ Wage_i)}{Current\ Wage_i} * elasticity_i.$$

I used the preferred employment elasticity (i.e., sensitivity of employment to wage changes) contained in Sabia and Burkhauser (2010), which was -0.6 for individuals aged 16 to 29 without a high school degree and -0.2 for all other individuals. The sole exception was for state and local government workers, where I assumed an elasticity of zero.[4] The sum across all affected workers yielded an estimated job loss of 5,745 jobs.

The next step was to calculate the weekly benefit for the average unemployed worker. Using the benefits calculator on the Missouri unemployment benefits web site and the wage income of average private-sector affected worker ($10,937), yields an average weekly benefit of $109.36[5]. The state of Missouri pays the first 20 weeks of benefits.[6] Thus, each eligible unemployed worker could receive a total of $2,187.20 in

---

[3] For a survey of research regarding the effect of the minimum wage on employment, see David Neumark and William L. Wascher, *Minimum Wages* (Cambridge, MA: MIT Press, 2008).
[4] Joseph J. Sabia and Richard V. Burkhauser, "Minimum Wages and Poverty: Will a $9.50 Federal Minimum Wage Really Help the Working Poor?" *Southern Economic Journal* (January 2010): 592-623.
[5] http://www.labor.mo.gov/DES/Claims/calculator.asp
[6] See http://www.labor.mo.gov/DES/Claims/

benefits paid for by the state of Missouri. These jobs are permanently eliminated and so it is appropriate to calculate the full amount of benefits for each worker.

Unemployment insurance, however, does not cover all unemployed workers. For example, it does not cover people who leave a job voluntarily, people looking for their first job, and re-entrants who previously left the labor force voluntarily. Furthermore, some individuals don't apply for benefits even though they are eligible. I assume that 35% of the unemployed workers will receive unemployment benefits based on analysis by Wenger (2001).[7]

The last step is to calculate the total cost to the Missouri unemployment benefits program. This done by multiplying the number of jobs lost (5,745) times the average benefit amount ($2,187.20) times the percent of unemployed individuals collecting benefits (35%). This calculation yields a figure of $4,397,510. This cost would be borne only during the first year of the minimum wage increase. The inflation adjustments in the minimum wage will also yield costs to the unemployment insurance program, but it is not possible to estimate the amount.

D. Impact on State Income Tax Revenue

The state of Missouri will gain increased revenue through higher income tax taxes paid by workers affected by the minimum wage who remain employed. However, it will

[7] Jeffery Wenger. "Divided We Fall: Deserving Workers Slip through America's Patchwork Unemployment Insurance System." *Economic Policy Institute*, 2001. Sabia and Burkhauser (2010) make the same assumption in their calculation of the amount of unemployment benefits generated by a minimum wage increase.

suffer reduced corporate income tax revenue to the extent the higher wage cost lowers profits of businesses.

To calculate the impact on individual income tax revenue, I again used data from January 2010 to December 2011 ORG CPS. I defined affected workers as those Missouri individuals earning between $7.00 and $8.24 per hour.[8] I used the following formula to estimate the change in income tax revenue:

$$\Delta Tax\ Revenue_i = (Tax_After_i - Tax_Before_i) - Prob_Job_Loss_i * Tax_Before_i,$$

where Tax_After_i is the income tax paid by worker i after the minimum wage increase. Tax_Before_i is the income tax paid by worker i after the minimum wage increase, and $Prob_Job_Loss_i$ is the probability of job loss for worker i. The first term shows the change in individual income tax revenue assuming no job loss and the second term shows the loss in tax revenue due to the employment loss caused by the minimum wage increase.

The income tax calculations were based on two assumptions.[9] First, the 50% percent of affected workers who were under the age 25 who were assumed to be dependents on another person's tax return. As a result, it was assumed that the affected workers' earnings were taxable at the maximum Missouri income tax rate of 6% both and after the minimum wage increase.[10] Second, all persons age 25 and older were assumed to be paying little or no income tax after exemptions and deductions. Thus, about 50% of the earnings increase will be taxed at a rate of 6%.

---

[8] I again assume that persons reporting an hourly wage rate between $7.00 and $7.24 are actually earning $7.25 per hour. The annual earnings level was calculated as the worker's wage rate times usual weekly hours worked times 52.

[9] The same assumptions are used in the State Auditor's fiscal notes for the initiatives.

[10] This assumption will overstate the revenue increase as 20% of affected workers under the age 25 are living by themselves and some of these individuals will not be a dependent on another person's tax return.

The tax calculations reveal an increase in income tax revenue increase to the state. Assuming no workers were laid off by the minimum wage increase, income tax revenue would rise by $6,043,534. However, the state will lose $1,965,446 in income tax revenue due to the lost earnings of private-sector workers no longer employed due to the minimum wage hike.[11] Thus, the net increase in individual income tax revenue is $4,078,088.

Businesses have three options to respond to the higher labor costs of a higher minimum wage. They can reduce their profits, raise prices, or lay off workers. Based on the 2010-2011 ORG CPS data, the minimum wage increase will raise private-sector labor costs by $192,620,900 if employment levels are not reduced. However, labor costs will be lowered by $55,240,790 due to the reduction in employment. Thus, labor costs will, on net, rise by $137,380,110. These increased labor costs may be either passed on to consumers through higher prices or reduced profits or more likely some combination of higher prices and reduced profits. Assuming that businesses absorbed all of the higher costs through reduced profits, the corporate income tax revenue would fall by the Missouri corporate income tax of 6.25% times the rise in labor costs of $137,380,110 * 1.0765 (to account for employer-paid Social Security and Medicare taxes) or $9,243,106.[12] Alternatively, if half of the higher labor costs were passed on to consumers, then corporate income tax revenue would fall by $4,621,553.

[11] The probability of job loss was calculated in the same manner as in the prior section.
[12] The corporate income tax for Missouri is available at: http://dor.mo.gov/business/corporate/

E. Impact on State and Local Sales Tax Revenue

To calculate the impact on state and local sales tax revenue the following approach was undertaken.[13] First, the total increase in worker earnings, adjusted for employment reductions, was calculated using the 2010-2011 ORG CPS. This figure was $152,246,540. Second, the increase in Missouri taxable sales was calculated as 25% of the earnings increase or $38,061,635. Third, the increase in sales tax revenue was calculated by multiplying the taxable sales change times the average state and local rate of 7.67% or $2,919,327.[14]

The higher minimum wage may decrease sales tax revenue to the extent that it reduces business profits, which will lower spending by business owners.

VI. Summary and Conclusions

I was asked by counsel to evaluate the fiscal impact of proposed statutory initiative petitions 2012-084 and 2012-085.

The results of my analysis indicate:

(1) labor costs to state and local government entities, based on state auditor fiscal notes, will rise by more than $1,352,182. A more inclusive estimate indicates that state and local government labor costs will increase by $16,003,712;

[13] The same general approach is used in the State Auditor's fiscal notes for the initiatives.
[14] The average rate comes from http://taxfoundation.org/news/show/27023.html

(2) unemployment benefit costs will rise by $4,397,510 during the first year of the minimum wage increase;

(3) individual income tax revenue will rise by at most $4,078,088;

(4) the loss in corporate income tax revenue could be as high as $9,243,105;

(5) state and local sales tax revenue will rise by at most $2,919,327;

(6) during the first year: state and local governments will incur increased costs of $20,401,222; the change in state and local government revenue will range from -$2,245,690 to +$6,997,415; and the net state and local government fiscal impact will range from -$22,646,912 to -$13,403,807.

Miami University Faculty Research Grant, 6/1990-8/1990, $4,000, "The Role of Firm Size in Pension Coverage and Options."

Miami University Faculty Research Grant, 6/1989-8/1989, $4,000, "Declining Unionism and the Gender Wage Gap," with William Even.

Participation in National Meetings

Panel Discussant, American Real Estate and Urban Economics Association/ASSA meetings, January 2008.

Presented, "Employee Turnover in the Long-Term Care Industry," at Academy Health Annual Research Meetings, June 2007.

Presented, "Participant Direction in Defined Contribution Pension Plans," at International Atlantic Economic Society meetings, October 2006.

Presented, "The Risk and Return of Pension Investments in Employer Stock," at International Atlantic Economic Society meetings, October 2005.

Presented, "Replacing Earnings After Termination: Evidence from the Displaced Worker Survey," at the Allied Social Science Association/National Association of Forensic Economics, January 2002.

Presented, "Labor Market Transitions of Older Workers," at the Allied Social Science Association/Society of Government Economists meetings, January 1999.

Presented, "Why has the Loss in Pension Coverage Accelerated Among Less Educated Workers?" at the American Economic Association Meetings, 1995.

Presented, "Wages and Gender Composition: Why Do Women's Jobs Pay Less?" at the American Economic Association Meetings, 1994, with Barry Hirsch.

Presented, "Pensions, Labor Turnover, and Employer Size" at the American Economic Association Meetings, 1993, with William Even.

Presented, "Why Did Male Pension Coverage Decline in the 1980s?" at the American Economic Association meetings, 1992, with William Even.

Participation in Regional Meetings

Presented "Unions and Pension Performance: The Role of Pension Design," at Southern Economics Association meetings, November 2009.

Panel member, "Recent Federal Reserve Policy: An Evaluation" at Southern Economics Association meetings, November 2009.

Discussant, "Topics in Health Economics," at Southern Economics Association meetings, November 2009.

Discussant, "Teacher Pay, Principals, and Schooling," at Southern Economics Association meetings, November 2009.

Presented "Is Bigger Still Better?: The Decline of the Wage Premium at Large Firms," at Western Economic Association meetings, July 2009.

Presented "Is Bigger Still Better?: The Decline of the Wage Premium at Large Firms," at Eastern Economic Association meetings, February 2009.

Panel Discussant at the Southern Economic Association meetings, November 2008.

Presented "Is Bigger Still Better?: The Decline of the Wage Premium at Large Firms," at Southern Economic Association meetings, November 2008.

Presented "The Growth of Participant Direction in Defined Contribution Pensions," at Western Economic Association meetings, July 2008.

Chair "Pensions and Retirement" Session at Southern Economic Association meetings, November 2007.

Presented "The Growth of Participant Direction in Defined Contribution Pensions," at Southern Economic Association meetings, November 2007.

Presented, "Participant Direction in Defined Contribution Pension Plans," at Southern Economic Association meetings, November 2006.

Panel Discussant, Southern Economic Association meetings, November 2005.

Presented, "Do Pensions Impede Phased Retirement?" at the Southern Economic Association meetings, November 2004.

Presented, "When Will the Gender Gap in Retirement Income Narrow?" at the Southern Economic Association meetings, November 2003.

Presented, "How Will the Growth of DC and 401(k) Plans Affect Pension Income?" at the Southern Economic Association meetings, November 2002.

Presented, "Racial Composition, Wages, and Quality Sorting," at the Southern Economic Association meetings, November 1999.

Presented, "Racial and Ethnic Differences in Pension Coverage and Benefit Levels," at the Southern Economic Association meetings, November 1998.

Presented, "Factors Influencing Participation and Contribution Levels in 401(k) Plans," at the Western Economics Association meetings, July 1998.

Presented, "Aging at Work: Employment Determination, Firm Strategies, and Public Policy in the United States," at the Western Economic Association meetings, July 1994.

Presented, "Why Did Male Pension Coverage Decline in the 1980s?" at the Western Economic Association meetings, July 1992.

Presented "Plant Size and the Decline of Unionism," at the Southern Economic Association meetings, 1989, with William Even.

Panel Discussant, Southern Economic Association meetings, November 1989.

Presented "The Labor Force Participation and Earnings Profiles of Married Female Immigrants," at the Southern Economic Association meetings, November 1988.

Presented "Pensions, Screening, and the Gender Wage Gap," at the Southern Economic Association meetings, November 1988.

Session Chair and Panel Discussant at the Southern Economic Association meetings, November 1988.

Participation in Invited Seminars, Conferences, and other Presentations

Presented, "Teaching Macroeconomics During Troubled Times," at Creative Ideas for Your Basic Economics Course Conference at Florida State University, February 2012.

Presented, "Participant Direction in Defined Contribution Pension Plans," at Pennsylvania State University, April 2010.

Presented, "The Parallels Between the Japanese Economic Crisis of the 1990s and the US Today" at Creative Ideas for Your Basic Economics Course Conference at Florida State University, February 2010.

Chair "Minimum Wage & EITC" Session at Society of Labor Economists meetings, May 2009.

Presented "Participant Direction in Defined Contribution Plans," at Lehigh University, April 2009.

Presented "Is Bigger Still Better?: The Decline of the Wage Premium at Large Firms," at Association of Private Enterprise Education meetings, April 2009.

Presented "The Growth of Participant Direction in Defined Contribution Pensions," at Trinity University, October 2008.

Presented "The Growth of Participant Direction in Defined Contribution Pensions," at Georgia State University, April 2008.

Presented "The Growth of Participant Direction in Defined Contribution Pensions," at Association of Private Enterprise Education meetings, April 2008.
Presented, "Improving Pension Coverage at Small Firms," at Hudson Institute, May 2006.

Presented, "Participant Direction in Defined Contribution Plans," at Society of Labor Economics meetings, May 2006.

Presented, "Participant Direction in Defined Contribution Plans," at Association of Private Enterprise Education meetings, April 2006.

Presented, "Participant Direction in Defined Contribution Plans," at University of Wisconsin-Milwaukee, April 2006.

Invited Panel Participant for Pepper Foundation and Center Symposium on pension reform, Washington, DC, February 2006.

Presented, "The Risk and Return of Pension Investments in Employer Stock," at West Virginia University, April 2005.

Presented, "The Risk and Return of Pension Investments in Employer Stock," at the University of Kentucky, November 2004.

Presented, "The Causes and Consequences of Company Stock Holdings in Pension Funds," at the Federal Reserve Bank of Atlanta, April 2004.

Presented, "The Causes and Consequences of Company Stock Holdings in Pension Funds," at the University of Oklahoma, February 2004.

Presented, "Tracking Union and Nonunion Wages in the U.S.: Can the Evidence be Reconciled?" at the Middlebury Annual Conference on Economic Issues, April 2002.

Presented, "How Will the Growth of DC and 401(k) Plans Affect Pension Income?" at the Miami University Center for Pension and Retirement Research Conference, June 2001.

Presented, "Benefits and Worker Productivity," Benefits for the Workplace of Tomorrow Conference, Wharton School, University of Pennsylvania, May 2001.

Participant, Innovations in Managing the Financial Risks of Retirement Conference, Wharton School, University of Pennsylvania, May 2000.

Presented "Using Hi-Tech in Large Lectures," at Association of Private Enterprise Education meetings, April 2000.

Presented "Employee Participation in 401(k) Plans," at University of Wisconsin-Milwaukee, October 1999.

Presented "Gender, Race, and Ethnicity in the Labor Market," as part of the Smith Chair course in Labor Economics at Brigham Young University, September 1999.

Presented, "The Decline in Pension Coverage Among Less Educated Workers," at the Florida State University Economics Department Seminar Series, 1996.

Presented, "Children's Effects on Women's Labor Market Attachment and Earnings" at the Conference on the Changes in Working Time in Canada and the United States, Canadian Employment Research Forum, 1996.

Presented, "Earnings, Rents, and Competition in the Airline Labor Market" at the Ohio State University Economics Department Seminar Series, 1996.

Presented, "Earnings, Rents, and Competition in the Airline Labor Market" at the Florida State University Economics Department Seminar Series, 1995.

Presented, "Employer Size and Labor Turnover: The Role of Pensions," at Syracuse University, 1995.

Presented, "Earnings, Rents, and Competition in the Airline Labor Market" while visiting scholar at the Federal Reserve Bank of Cleveland, 1995.

Presented, "Trends in Individual and Household Pension Coverage," at the Miami University Center for Pension and Retirement Research Conference, 1994.

Presented, "Racial Composition, Quality Sorting, and the Black-White Wage Gap" at the University of Wisconsin, Institute for Research on Poverty, Small Grants Workshop, 1993, with Barry Hirsch.

Presented, "Why Did Male Pension Coverage Decline in the 1980s?" at the Florida State University Economics Department Seminar Series, 1992.

Participant at National Bureau of Economic Research (NBER) Labor Studies meetings of the Summer Institute, 1992.

Presented, "Why Did Male Pension Coverage Decline in the 1980s?" at the Miami University Conference on Current Pension Policy Issues, 1992.

Organizer and participant at conference on "Contemporary Issues in Pension Economics," hosted by the Center for Pension and Retirement Research, Miami University, 1990.

Presented "The Effect of International Competition on Union and Nonunion Wages," at the University of Cincinnati Seminar Series, 1987.

Bulletin of Economic Research, Canadian Journal of Economics, Contemporary Economic Policy, Eastern Economics Journal, Economic Development and Cultural Change, Economic Inquiry, Industrial Relations, Industrial and Labor Relations Review, International Economic Review, Journal of Economics and Business, Journal of Human Resources, Journal of Labor Economics, Journal of Labor Research, Journal of Pension Economics and Finance, Labour Economics, Mid-American Journal of Business, Policy Studies Review, Quarterly Journal of Economics, Quarterly Review of Economics and Finance, Real Estate Economics, Review *of Economics and Statistics, Social Science Quarterly, Southern Economic Journal*

Outside reviewer for Department of Economics, UNC-Greensboro, Georgia State University.

Promotion and tenure letters for candidates at Georgia State University, Kansas State University, Monmouth University, Ohio State University, University of Massachusetts, University of Southern California, and University of Wisconsin-Milwaukee.

Honors and Awards

Awarded sabbatical, Trinity, Fall 2011.

Nominated for FSU Award for Excellence in Undergraduate Teaching, Spring 2005.

Named Rod and Hope Brim Eminent Scholar in Economics, FSU, Fall 2004.

Research Fellow, Institute for the Study of Labor (IZA), Bonn, 2004-.

Who's Who in Economics, Fourth Edition, Mark Blaug and Howard Vane (eds), Edward Elgar Publishing, 2003, pp. 524 (selection criteria: one of the 1,200 most frequently cited economists in the years 1990-2000 using the Social Science Citation Index).

Awarded Abba Lerner named professorship, FSU, Spring 2000.

Awarded sabbatical, FSU, Spring 2000.

Received FSU Award for Excellence in Undergraduate Teaching, Spring 2000.

Received FSU Teaching Incentive Program Award, Fall 1995.

Nominated for FSU Award for Excellence in Undergraduate Teaching, Spring 1994.

Nominated for Outstanding Teaching Award, Associated Student Government, Miami University,1992.
Selected by the Miami University Sisters of Delta Gamma for a "Favorite Professor Award" in Fall 1990.

Honorary Member of Golden Key National Honor Society, Fall 1989.

Selected by the Sisters of Delta Gamma as "One of the twenty five most outstanding faculty members at Miami University" in Fall 1988.

Service

Vice President, Southern Economic Association, 2011-

Trinity University

Dick and Peggy Prassel Professor of Business Administration Search Committee, 2011
Faculty and Staff Compensation Committee, 2010-2011
Student Retention Committee, 2010

Florida State University

University and College Committees:

Member, GPC subcommittee for Marketing, Spring 2008.
Member, Graduate Policy Committee, Fall 2007-.
Chair, GPC subcommittee for Political Science, Fall 2006.
Member, Title IV Admissions Attendance Committee, Fall 2003-Spring 2004.
Member, College of Social Sciences Executive Committee, Fall 2003-.
Member, Ad Hoc Committee on COSS Technology, Spring 2003.
Member, Computing and Information Resource Committee, Fall 1999-.
Member, Academic and Policy Affairs Committee, Fall 1996-Spring 1998.

Economics Department Committees:

Member, Ad Hoc Committee on Economics 2000 Level Courses, Spring 1999.
Member, Undergraduate Economics Committee, Fall 1998-
Member, Economics Department Executive Committee, Fall 1994-Spring 1995, Fall 1996-Spring 1999, Fall 2000-.
Economics Department Library Representative, Fall 1993-.
Micro/Macroeconomics Seminar Coordinator, Fall 1993-Spring 1995, Fall 1998-Fall 1999, Fall 2001, Fall 2006-.

Comprehensive Examination Committees:

Member, Masters Comprehensive Exam Committee, Spring 1994.
Member, Ph.D. Labor Field Exam Committee, Fall 1992, Spring 1994, Fall 1994, Fall 1995, Fall 1996, Spring 1997, Spring 1998.
Chair, Masters Comprehensive Exam Committee, Fall 1994, Spring 1998.
Chair, Ph.D. Labor Field Exam Committee, Spring 1993-Fall 1993, Spring 1995, Spring 1996, Spring 2000, Spring 2001, Fall 2001.

Miami University

Computing Task Force, Department of Economics, 1991-92.
Recruiting Committee, Department of Economics, 1990-92.
Economics Club Advisor, 1988-1991.
Research Associate, Center for Pension and Retirement Research, 1988-92.
Delta Sigma Pi Chapter Advisor, 1988-89.
Student Finance Committee, Student Affairs Council, 1988-89.
Omicron Delta Epsilon Advisor, 1987-88.

Theses, Extended Papers, and Dissertations

Undergraduate Honors Thesis:

Chair, Leela Hebbar, 1995

Member, Nicole Cubies, 2006
Member, John Stutts, 2006
Member, Todd Crannell, 2000
Member, Mark Plotnick, 2000
Member, Bobby Pittman, 1998

MS Thesis and Extended Paper:

Chair, Maria Arce-Trigatti, 2009
Chair, George Holescko, 2000
Chair, J. Michael DuMond, 1994

Member, Shael Wolfson, 2000

Member, Lehr Eliason, 2000
Member, Steve Muri, 2000
Member, Ken Meier, 1998
Member, Tarteshia Williams, 1995
Member, Richard Page, 1994

PhD Dissertation:

Chair, James Farrell, 2009
Chair, Mark Keightley, 2008
Chair, Ali Al-Malki, 2007
Chair, Carter Doyle, 2005
Chair, Edward Wolpert, 1998
Chair, J. Michael DuMond, 1997

Member, Bogdan Daraban, 2007
Member, Russell Engel, 2007
Member, Li Feng, 2006
Member, Chuck Skipton, 2003
Member, Nicole Yurgin, 2003
Member, Jennifer Troyer, 1999
Member, Josefina Tranfa, 1999
Member, Shaliesh Bandarhi, 1998
Member, James Freeman, 1998
Member, Brian Nottage, 1998
Member, Ben Shippen, 1995
Member, Ed Schumacher, 1994

Fiscal Note Summary

State and local governments estimate no direct costs or savings from the proposal, but operating costs could increase by an unknown annual amount that could be significant. State and local government tax revenue could change by an unknown annual amount ranging from a $7.5 million decrease to a $261 million increase depending on business decisions.

STATE AUDITORS OFFICE

The Honorable Nicole Galloway
State Auditor
State Capitol Building
Jefferson City, MO 65101

RE: Petition approval request from Richard Von Glahn regarding a proposed statutory amendment to Chapter 290, Version 14 (2018-209)

Dear Auditor Galloway:

Enclosed please find an initiative petition sample sheet for a proposal to amend the Revised Statutes of Missouri filed by Richard Von Glahn on April 3, 2017.

We are referring the enclosed petition sample sheet to you for the purposes of preparing a fiscal note and fiscal note summary as required by Section 116.332, RSMo. Section 116.175.2, RSMo requires the state auditor to forward the fiscal note and fiscal note summary to the attorney general within twenty days of receipt of the petition sample sheet.

Thank you for your immediate consideration of this request.

Sincerely,

John R. Ashcroft

Be it enacted by the people of the state of Missouri:

Section 290.502 of the Revised Statutes of Missouri is amended and a new section to be known as section 290.529 is enacted to read as follows:

290.502. 1. Except as may be otherwise provided pursuant to sections 290.500 to 290.530, effective January 1, 2007, every employer shall pay to each employee wages at the rate of $6.50 per hour, or wages at the same rate or rates set under the provisions of federal law as the prevailing federal minimum wage applicable to those covered jobs in interstate commerce, whichever rate per hour is higher.

2. The minimum wage shall be increased or decreased on January 1, 2008, and on January 1 of successive years, by the increase or decrease in the cost of living. On September 30, 2007, and on each September 30 of each successive year, the director shall measure the increase or decrease in the cost of living by the percentage increase or decrease as of the preceding July over the level as of July of the immediately preceding year of the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) or successor index as published by the U.S. Department of Labor or its successor agency, with the amount of the minimum wage increase or decrease rounded to the nearest five cents.

3. Except as may be otherwise provided pursuant to sections 290.500 to 290.530, and notwithstanding subsection (1) of this section, effective January 1, 2019, every employer shall pay to each employee wages at the rate of not less than $8.50 per hour, or wages at the same rate or rates set under the provisions of federal law as the prevailing federal minimum wage applicable to those covered jobs in interstate commerce, whichever rate per hour is higher. Thereafter, the minimum wage established by this subsection shall be increased each year by $.70 per hour, effective January 1 of each of the next five years, until it reaches $12.00 per hour, effective January 1, 2024. Thereafter, the minimum wage established by this subsection shall be increased or decreased on January 1, 2025, and on January 1 of successive years, per the method set forth in subsection (2) of this section.

4. For purposes of this section, the term "public employer" means an employer that is the state or a political subdivision of the state, including a department, agency, officer, bureau, division, board, commission, or instrumentality of the state, or a city, county, town, village, school district, or other political subdivision of the state. Subsection (3) of this section shall not apply to a public employer with respect to its employees. Any public employer that is subject to subsections (1) and (2) of this section shall continue to be subject to those subsections.

290.529. Except in the circumstances set forth in section 290.523, all the provisions of sections 290.500 to 290.530 are severable. If any provision, including any section, subsection, subdivision, paragraph, sentence, or clause, of sections 290.500 to 290.530, or the application thereof to any person or circumstance, is found by a court of competent jurisdiction to be invalid, unconstitutional, or unconstitutionally enacted, such decision shall not affect other provisions or applications of sections 290.500 to 290.530 that can be given effect without the invalid, unconstitutional, or unconstitutionally enacted provision or application.

MISSOURI STATE AUDITOR'S OFFICE
FISCAL NOTE (18-209)

Subject

Initiative petition from Richard Von Glahn regarding a proposed amendment to Chapter 290 of the Revised Statutes of Missouri. (Received April 4, 2017)

Date

April 24, 2017

Description

This proposal would amend Chapter 290 of the Revised Statutes of Missouri.

The amendment is to be voted on in November 2018.

Public comments and other input

The State Auditor's office requested input from the **Attorney General's office,** the **Department of Agriculture,** the **Department of Economic Development,** the **Department of Elementary and Secondary Education,** the **Department of Higher Education,** the **Department of Health and Senior Services,** the **Department of Insurance, Financial Institutions and Professional Registration,** the **Department of Mental Health,** the **Department of Natural Resources,** the **Department of Corrections,** the **Department of Labor and Industrial Relations,** the **Department of Revenue,** the **Department of Public Safety,** the **Department of Social Services,** the **Governor's office,** the **Missouri House of Representatives,** the **Department of Conservation,** the **Department of Transportation,** the **Office of Administration,** the **Office of State Courts Administrator,** the **Missouri Senate,** the **Secretary of State's office,** the **Office of the State Public Defender,** the **State Treasurer's office, Adair County, Boone County, Callaway County, Cass County, Clay County, Cole County, Greene County, Jackson County, Jasper County, St. Charles County, St. Louis County, Taney County,** the **City of Cape Girardeau,** the **City of Columbia,** the **City of Jefferson,** the **City of Joplin,** the **City of Kansas City,** the **City of Kirksville,** the **City of Mexico,** the **City of Raymore,** the **City of St. Joseph,** the **City of St. Louis,** the **City of Springfield,** the **City of Union,** the **City of Wentzville,** the **City of West Plains, Cape Girardeau 63 School District, Hannibal 60 School District, State Technical College of Missouri, Metropolitan Community College, University of Missouri, St. Louis Community College, University of Central Missouri, Harris-Stowe State University, Lincoln University, Missouri State University, Missouri Southern State University, Missouri Western State University, Northwest Missouri State University, Southeast Missouri State University, Truman State University, Kansas City Board of Police Commissioners, The Metropolitan Police Department - City of St. Louis,** the **St. Louis County Board of Elections,** the **Board of Election**

Commissioners City of St. Louis, the **Kansas City Board of Election Commissioners,** the **Platte County Board of Elections,** the **Jackson County Election Board,** and the **Clay County Board of Election Commissioners**.

Lara Granich and **Missouri Jobs with Justice Voter Action** provided information as proponents of the proposal to the State Auditor's office.

Robert Bonney, Chief Executive Officer of the Missouri Restaurant Association provided information as an opponent of the proposal to the State Auditor's office.

Assumptions

Officials from the **Attorney General's office** indicated they expect that, to the extent that the enactment of this proposal would result in increased litigation, they can absorb the costs associated with that increased litigation using existing resources. However, if the enactment of this proposal were to result in substantial additional litigation, they may request additional appropriations. They do not expect that the enactment of this proposal would result in any other increased costs to their office.

Officials from the **Department of Agriculture** indicated there is no fiscal impact to their department for this initiative petition.

Officials from the **Department of Economic Development** indicated no impact to their department.

Officials from the **Department of Higher Education** indicated this initiative petition would not have a fiscal impact on their department since public employers are exempt from the new provisions proposed.

Officials from the **Department of Health and Senior Services** indicated this proposal would have no direct fiscal impact on their department since government employees are exempt from its provisions. However, employees of certain entities that receive funding through the department's budget would be impacted, such as Medicaid Home and Community Based Services vendors/providers and Area Agencies on Aging.

Officials from the **Department of Insurance, Financial Institutions and Professional Registration** indicated this petition, if passed, will have no cost or savings to their department.

Officials from the **Department of Mental Health** indicated this proposal creates no direct obligations or requirements to their department that would result in a fiscal impact.

Officials from the **Department of Natural Resources** indicated their department defers to the Office of Administration to determine the fiscal impact of this proposal.

Officials from the **Department of Corrections** indicated they defer to the Office of Administration.

Officials from the **Department of Labor and Industrial Relations** indicated no fiscal impact on their department.

Officials from the **Department of Revenue** indicated this petition will have no fiscal impact on their department. Their department defers to the Office of Administration for a state impact.

Officials from the **Department of Public Safety - Office of the Director** indicated they will defer to the response provided for this initiative petition by the Office of Administration - Human Resources.

Officials from the **Department of Social Services** indicated no fiscal impact on their department. They defer to the Office of Administration.

Officials from the **Governor's office** indicated there should be no added cost or savings to their office.

Officials from the **Missouri House of Representatives** indicated no fiscal impact to their office.

Officials from the **Department of Conservation** indicated that no adverse fiscal impact to their department would be expected as a result of this proposal.

Officials from the **Department of Transportation** indicated unknown fiscal impact.

Officials from the **Office of Administration** indicated the proposal amends Sections 290.502 and adds Section 290.529, RSMo.

Section 290.502, RSMo, increases the minimum wage to $8.50 per hour, beginning January 1, 2019 and by another $0.70 per hour each year until it reaches $12.00 per hour beginning January 1, 2024. Thereafter, the minimum wage will be adjusted annually based on the increase/decrease in the cost of living.

The proposal exempts public employers from the requirements; therefore, there would be no cost to the State of Missouri.

Because no tax rates are affected, there is no direct impact on general and total state revenues. However, these proposals may have several indirect affects, which could impact revenue collections by an unknown amount, including but not limited to:

- Increased wages for certain employees. According to the US BLS, in 2015, Missouri had 57,000 hourly employees earning wages at or below the federal minimum wage;[1]
- Increased consumption by those employees;
- Lower overall employment (if employers choose to hold costs steady);

[1] http://www.bls.gov/opub/reports/minimum-wage/2015/home.htm

- Lower business investment (if employers' payrolls increase);
- Increased prices as firms pass–through labor costs.

This proposal should not impact their office.

Officials from the **Office of State Courts Administrator** indicated there is no fiscal impact on the courts.

Officials from the **Missouri Senate** indicated no fiscal impact on their office.

Officials from the **Secretary of State's office** indicated their office is required to pay for publishing in local newspapers the full text of each statewide ballot measure as directed by Article XII, Section 2(b) of the Missouri Constitution and Section 116.230-116.290, RSMo. Their office is provided with core funding to handle a certain amount of normal activity resulting from each year's legislative session. Funding for this item is adjusted each year depending upon the election cycle with $1.3 million historically appropriated in odd numbered fiscal years and $100,000 appropriated in even numbered fiscal years to meet these requirements. Through FY (fiscal year) 2013, the appropriation had historically been an estimated appropriation because the final cost is dependent upon the number of ballot measures approved by the General Assembly and the initiative petitions certified for the ballot. In FY 2015, the General Assembly changed the appropriation so that it was no longer an estimated appropriation. In FY 2017 their office was appropriated $2.6 million to publish the full text of the measures. In FY 2017, at the August and November elections, there were 6 statewide Constitutional Amendments or ballot propositions that cost $2.4 million to publish (an average of $400,000 per issue). Their office will continue to assume, for the purposes of this fiscal note, that it should have the full appropriation authority it needs to meet the publishing requirements. Because these requirements are mandatory, they reserve the right to request funding to meet the cost of their publishing requirements if the Governor and the General Assembly again change the amount or continue to not designate it as an estimated appropriation.

Officials from the **Office of the State Public Defender** indicated this initiative petition will not have any significant impact on their office.

Officials from the **State Treasurer's office** indicated they do not predict an immediate fiscal impact upon their office if Missouri's minimum wage rate were increased to $12.00 per hour. However, the potential future impact of applying cost of living increases and/or increases in the federal minimum wage to a Missouri minimum wage of $12.00 per hour, as called for elsewhere in Section 290.502, RSMo., is unknown.

Officials from **Greene County** indicated there are no estimated costs or savings to report from their county for this initiative petition.

Officials from the **City of Kansas City** indicated this petition may have a small negative fiscal impact on their city as a result of the increased hourly minimum wage being higher than the hourly rate paid some city employees.

Officials from the **City of Raymore** indicated no fiscal impact.

Officials from **University of Missouri** indicated they are not able to estimate any significant financial impact on their university.

Officials from **University of Central Missouri** indicated they estimate no fiscal impact since they are excluded under the public employer definition in section 4.

Officials from the **Missouri State University** indicated no fiscal impact.

Officials from **Missouri Southern State University** indicated they do not anticipate any fiscal impact from this initiative petition.

Officials from **Missouri Western State University** indicated the wording is unclear as to whether Colleges/Universities are included in this petition. In assuming they are included, they calculate the following significant fiscal impact to their university. The proposal will have a severe negative impact on the university. Payroll expenses will increase in 2019 approximately $275,800.00 and increase annually with an overall projected increase in 2024 of $1,635,000.00. The projections are based on a starting minimum wage of $8.50 per hour in 2019, increasing .70 an hour annually until 2024 when the proposed fiscal note would reach $12.00 an hour.

Officials from the **Kansas City Board of Election Commissioners** indicated no fiscal effect on their operations.

Officials from the **Platte County Board of Elections** indicated no fiscal impact.

Officials from the **Jackson County Election Board** indicated this petition does not have a fiscal impact on their office.

Lara Granich and **Missouri Jobs with Justice Voter Action** provided the following information as proponents of this initiative petition.

This letter is from Lara Granich and Missouri Jobs with Justice Voter Action, proponents of the above-referenced Minimum Wage Initiative Petitions. Pursuant to RSMo. Section 116.175, we write to submit the following fiscal impact information to assist your office in its analysis of the fiscal impact of the above-mentioned seven proposed Minimum Wage Initiative Petitions.

Our analysis estimates the impact of the proposed Minimum Wage Initiative Petitions on state and local sales and personal income tax revenue in Missouri. We follow the process that has been used in the past to estimate the impact of minimum initiative petitions on state and local sales and personal income tax revenue, with some refinements. We also address certain claims that have been made by opponents of similar initiative petitions in the past.

As these petitions exclude public workers from the proposed minimum wage increases, we do not include in our analysis an estimate of the impact on state and local payroll costs of the proposed Minimum Wage Initiative Petitions.

I. Estimate of Number of Workers Affected Statewide and the Impact on Their Wages

Table 1. Summary of the Number of Affected Workers and Aggregate Wage Increases for Missouri in the Final Year of Minimum Wage Implementation.

Proposal	Year of Peak Minimum Wage (MW)	Proposed Peak MW	Tipped MW in Peak MW Year	Workers Affected by MW increase	Aggregate Annual Wage Increase in Nominal Dollars
13,14,15[a]	2023	$ 12.00	$ 6.00	835,350	$4,358,798,129

Notes: Author's Analysis of American Community Survey (ACS) Data from 2014.
(a) Since these proposals only vary on non-economic factors, their economic and fiscal impacts are treated as equal for the purposes of this report.

Across the proposals analyzed, the total aggregate wage increase for workers in Missouri ranges from a low of $3.347 billion (Proposals 22-24) to a high of $5.745 billion under Proposal 32. While some proposals have the same final impact numbers, they have different impacts in the initial years (not listed) based on the relative pace of increases in earlier years. A full, year-by-year impact analysis is presented in Appendix Tables A1 through A13 below.

The wage impact of an increase in the minimum wage for the state of Missouri is calculated using the following procedure. The American Community Survey (ACS) Public Use Micro Sample for the most recent year available (2014) for the state of Missouri was downloaded from the US Census Bureau. The American Community Survey was chosen over the Current Population survey because the ACS has a significantly larger sample. We followed the method of Perry, Thomason, and Bernhardt (2016) for calculating an hourly wage rate from the ACS based on observed total annual wage income, typical hours worked each week and weeks worked per year. Since ACS income figures are clustered around whole-numbers, we smoothed the wage distribution by randomly adding or subtracting $0.25 from each wage figure.

Wage adjustments were made only for those individuals earning less than the proposed minimum wage, or proposed tipped minimum wage. We did not make additional adjustments for the "ripple effect" of minimum wage increases on workers earning slightly above the new threshold. Recent evidence suggests that workers earning up to 15 percent above of the minimum wage also receive small increases in response to a minimum wage increase. (See Wicks-Lim (2006) and Dube, Giuliano and Leonard (2015).) Thus, the estimated impacts listed above are likely to be smaller than the actual impact of increasing the minimum wage to the proposed level.

The proposed minimum wage increases exclude public employees. However, it was not practicable to exclude public employees from these calculations because the ACS does not have a published variable that allows for identification of public employees. Nonetheless, this inclusion of public employees should have only a minimal impact on our results, since their numbers are small and most already earn more than the proposed minimum wage increases.[1]

All wages from the 2014 survey were adjusted upward to account for inflation between the time of the survey and the time of measurement of the impact. Actual rates of inflation were used to adjust wages up to 2016. For all subsequent years between 2017 and 2028, baseline wages were adjusted using the projected annual average rate of change in the Consumer Price Index for Urban Workers (CPI-U) for the Midwest region. The 2015 and 2016 Missouri Minimum wage of $7.65 was adjusted by the same factor prior to measuring the impact of a change to the proposed minimum wage in 2019.

After these adjustments, the resulting hourly wage of all employees was compared to the proposed minimum wage. A total of twenty-one proposals were analyzed. For each proposal, we constructed a baseline wage scenario that used only basic wage changes from expected inflation rates to predict each ACS respondent's hourly wage rate in each year

[1] For Missouri's state employees, this can be validated by viewing the earnings of all state employees at: http://mapyourtaxes.mo.gov/MAP/Employees/. In larger counties and cities most all public employees already earn more than the highest proposed minimum wage. Smaller counties and towns may have some public employees who earn less than the highest proposed minimum.

between 2019 and 2028. We then constructed a counterfactual, or "proposed" wage distribution for each worker under all twenty-one minimum wage proposed scenarios. Since the minimum wage proposals offer nine different paths for raising the minimum wage for all non-tipped private sector workers, and different wage paths for tipped workers, we create separate minimum wage changes for tipped and non-tipped workers. Specifically, we used information on a worker's occupation and observed wage levels to separately identify tipped workers and assign them the proposed tipped minimum wage in each year, rather than the higher non-tipped minimum wage.[2]

If the proposed minimum wage was less than the inflation-adjusted hourly earnings of an employee, then no impact was calculated. If the proposed minimum wage was more than the hourly earnings for an employee, then the difference between the inflation-adjusted hourly earnings (i.e. baseline) and the proposed minimum wage was calculated. That difference was multiplied by the number of hours the employee worked in the year to calculate the annual impact for that employee. The result was then multiplied by a weighing factor for that employee in the population. The total impact for the state of Missouri was then summed across all affected workers to generate a total estimated increase in wage income in the state.

We do not include an estimate of job losses due to minimum wage changes. Existing research is clear that past minimum wage increases have had no measurable effect on aggregate employment levels. Larger minimum wage increases, such as those in Los Angeles, Seattle, and other jurisdictions, have not yet been studied to detect a clear disemployment effect. While it is possible that there may be some employment losses due to automation or other factors, this potential negative effect is likely offset by the positive potential job growth stemming from multiplier effects of the spending of minimum wage workers who receive substantial raises. There is substantial research to indicate that increases in the minimum wage have multiplier effects that increase the direct effects. For this reason and because of the likely increases in wages for individuals who earn above the proposed minimum wage rates, the impacts summarized in the table are considered conservative estimates relative to the total impact that would occur as a result of increasing the minimum wage to the proposed levels.

II. Economic Literature on the Impact of Minimum Wage Increases on Employment

Next, it is necessary to review the economic literature on the impact of minimum wage increases on employment. Opponents often claim that minimum wage increases may reduce employment in a state. If that is true, then those employment reductions would result in reductions in state income and sales tax revenue. However, review of the most credible recent empirical research on the minimum wage shows that increases in the minimum wage have had no discernible impact on employment. We thus conclude that it is not appropriate to project that the proposed initiative petitions would result in any detectable employment reduction, and resulting losses in income and sales tax revenue, or increases in unemployment-related costs to the state.

Economists have conducted hundreds of studies of the employment impact of the minimum wage. A recent meta-study – a formal statistical study of studies – by Doucouliagos and Stanley (2009) reviewed all the research conducted over the last three decades on the employment impact of minimum wage increases on teenagers in the United States. The researchers concluded that the minimum wage has little or no discernible effect on the employment prospects of low-wage workers. Their study followed a rigorous, peer-reviewed procedure and has the advantage of using a set of predetermined, objective criteria for weighing the validity of statistical findings across studies with different results.

[2] We defined tipped workers as those employed in occupations that typically receive a large share of income as tips. These occupations were 'Bartenders' (4040), 'Waiters and Waitresses', 'Food Servers, Non-restaurant' and 'Miscellaneous food preparation and serving related workers including dining room and cafeteria attendants and bartender helpers'.

(Source: Doucouliagos, Hristos and T. D. Stanley. 2009. "Publication Selection Bias in Minimum-Wage Research? A Meta-Regression Analysis." British Journal of Industrial Relations,vol. 47, no. 2, pp. 406-428.)

Recent theoretical and empirical research emphasizes several explanations for the consistently negligible employment impacts of moderate increases in the minimum wage. First, relative to total wage costs, minimum-wage increases are small. Second, employers and workers appear to respond to minimum-wage increases in many ways that reduce the direct cost to employers and substantially reduce or eliminate the need to cut employment.

Probably the most important economic response to a higher minimum wage is a reduction in turnover. At higher wages, employers fill vacancies faster and retain employees longer, boosting total employment and average productivity per worker while reducing direct and indirect training costs. Dube, Lester, and Reich (2012), for example, examined the effect of the minimum wage on labor turnover among teens and restaurant workers. They find "...striking evidence that separations, new hires, and turnover rates for teens and restaurant workers fall substantially following a minimum wage increase..." (p. 2). Their findings, using nationally representative data, are consistent with local case studies of the minimum wage and related "living wage" laws, including Dube, Naidu, and Reich's (2007) analysis of the San Francisco city-wide minimum wage; Fairris's (2005) study of local government contractors in Los Angeles; Howes (2005) on homecare workers in California; and Reich, Hall, and Jacobs (2005) on workers at the San Francisco airport.
(Sources: Dube, Arindrajit, T. William Lester, and Michael Reich. 2012. "Minimum Wage Shocks, Employment Flows and Labor Market Frictions." "The Economic Effects of a Citywide Minimum Wage." *Industrial and Labor Relations Review*, vol. 60, no. 4, pp. 522-543; Fairris, David. 2005. "The Impact of Living Wages on Employers: A Control Group Analysis of the Los Angeles Ordinance." *Industrial Relations*, vol. 44, no. 1, pp. 84-105; Howes, Candace. 2005. "Living Wages and the Retention of Home Care Workers in San Francisco." *Industrial Relations*, vol. 44, 5 no. 1, pp. 139-163; Reich, Michael, Peter Hall, and Ken Jacobs. 2005. "Living Wage Policies at the San Francisco Airport: Impacts on Workers and Businesses." *Industrial Relations*, vol. 44, no. 1, pp. 106-138.)

Employers also appear to respond to increases in the minimum wage by taking measures to boost productivity. Hirsch, Kaufman, and Zelenska's (2011) study of the impact of the federal minimum wage increase on 81 fast-food restaurants in Georgia and Alabama, for example, asked fast-food managers about the scope for efficiency improvements in response to the minimum-wage rise. About 90 percent of managers indicated that they planned to respond to the minimum wage increase with increased performance standards such as "requiring a better attendance and on-time record, faster and more proficient performance of job duties, taking on additional tasks, and faster termination of poor performers." (p. 27) Roughly the same share of managers said that they sought to "boost morale" by presenting the minimum wage increase as a "challenge to the store" and using this as a way "to energize employees to improve productivity." (pp. 28-29) Based on their interviews with store managers, the researchers concluded that a minimum wage increase may function as a "catalyst or shock that forces managers to step out of the daily routine and think about where cost savings can occur." (p. 29) (Source: Hirsch, Barry T., Bruce Kaufman, and Tetyana Zelenska, "Minimum Wage Channels of Adjustment." IZA Discussion Paper No. 6132. Germany: Institute for the Study of Labor. http://www2.gsu.edu/~ecobth/IZA_HKZ_MinWageCoA_dp6132.pdf)

A higher minimum wage may also motivate workers to work harder, independently of any actions by employers to increase productivity. According to "efficiency wage" theory, wages above the competitive-market rate may elicit greater work effort for several reasons. As Carl Shapiro and Joseph Stiglitz (1984) have argued, higher pay increases the cost to workers of losing their job, potentially inducing greater effort from workers in order to reduce their chances of

being fired. George Akerlof (1982), arguing from a more sociological point of view, has suggested that workers may see higher wages as a gift from employers, leading workers to reciprocate by working harder. (Sources: Shapiro, Carl and Joseph E. Stiglitz. 1984. "Equilibrium unemployment as a worker discipline device." *American Economic Review*, vol. 74, no. 3, pp. 433-444; Akerlof, George A. 1982. "Labor contracts as partial gift exchange." *Quarterly Journal of Economics*, vol. 97, no. 4, pp. 543-569.)

We therefore conclude that the proposed increase in the Missouri minimum wage would have no discernible impact on the employment levels of low-wage workers. Accordingly, we do not factor in reductions in employment, or any resulting decrease in sales tax or income tax. We also do not project any increased unemployment insurance costs – both because we do not project any resulting job losses, and, additionally, because unemployment insurance costs are paid for by employer premiums, and so are ultimately not a cost to the state.

For similar reasons, we do not believe that the proposed increase will have any significant adverse economic impact on small businesses or, by extension, on corporate income tax revenue. In fact, many small businesses already pay little if any corporate income tax.

III. State and Local Sales and Personal Income Tax Revenue Impact of Raising the Minimum Wage

Based on the wage impact figures calculated above, and the understanding that the minimum wage increases would be unlikely to result in offsetting job losses, we next calculate the impact of the projected wage increases on state and local sales and personal income tax revenue in Missouri. We project only the direct impact of the various minimum wage increase scenarios on such tax revenue. We do not attempt to project the additional impact through a GDP multiplier effect, or the potentially higher sales taxes generated if employers offset wage increases with higher prices (which would be taxable).

Personal Income Tax Revenue. In order to determine the projected increase in personal income tax revenues that would result directly from the increased wages, we had to develop assumptions about the effective income tax rates of the affected workers. We made the following assumptions with respect to the effective tax rate:

1. That 25% of affected workers can be claimed as a dependent on another party's Missouri income tax return and, as a result, would pay an effective tax rate of 6.0% on the increase in income;
2. That 50% of the affected workers would file as single taxpayers, would claim one deduction of $2,100, and would be entitled to a standard deduction of $5,800. This would result in an effective tax rate of 2.47%;
3. The remaining 25% would, we assumed, pay no additional Missouri income tax.

In light of these assumptions, the increased Missouri income tax revenue for each petition version can be calculated as follows: (total wage increase * 25% * 6.0%) + (total wage increase * 50% * 2.47%) + (total wage increase *25% * 0%).

Sales Tax Revenue. The state of Missouri imposes a 4.225% state sales tax on those items that are not exempt from the sales tax base. In addition, the average local sales tax rate is 2.95%. As a result, the average Missouri net sales tax rate is 7.175%. To estimate the share of income that is spent on goods and services that are subject to sales taxes, we used data from the 2015 Consumer Expenditure Survey (CES) for the US to estimate the share of income spent on categories that are subject to sales taxes. The CES summary tables list average spending per consumer across 20 different

categories (e.g. housing, transportation, food away from home) and we categorized each spending item as taxable or non-taxable and then calculated the share of spending that we taxable.[3] The resulting rate was 30.3 percent.

Based upon the above assumptions, and the total wage increase calculations for each version of the petition, we estimate that the increase in state income tax revenue resulting from the increased wages would be as follows:

Table 2. Summary of the Impact of Minimum Wage Increases on State and Local Sales and Income Taxes in Year of Full Minimum Wage Final Implementation.

Proposal	State Sales Tax (4.225%)	Local Sales Tax Revenue (2.95%)	Total Sales Tax Revenue Increase	Personal Income Tax Revenue	Total Sales and Personal Income Tax Revenue Increase

Note: Author's Analysis of American Community Survey (ACS) data from 2014 and fiscal impact assumptions described above. All dollars are in nominal figures. (a) Since these proposals only vary on non-economic factors, their economic and fiscal impacts are treated as equal for the purposes of this report.

As described in Table 2 above, the fiscal impact of the proposed minimum wage increases varies based on the ultimate level of the minimum wage and the degree of tipped minimum wage phase out. The estimates of the total fiscal benefit range from $164 million to $282 million annually. Appendix tables A1 through A13 provide a year-by-year summary of the fiscal benefits.

[3] Specifically, the categories we assumed to be subject to state and local sales taxes are: food, household furnishings and equipment, vehicle purchases, gasoline and motor oil, entertainment, and all other expenditures. We assumed that 50 percent of the spending on the category "apparel and services" was taxable.

We hope that this information is useful to your office as your prepare your analyses of the petitions.

Respectfully submitted,

Lara Granich

1) Total employed workers in 2014 from the ACS was estimated to be 2,795,876. This figure was inflated to each subsequent year based on the population projections in the State of Missouri between 2020 and 2030 (CAGR = 0.6%)

Robert Bonney, Chief Executive Officer of the Missouri Restaurant Association provided the following information as an opponent of this initiative petition.

These corrections were subsequently provided to the submitted information

In the table on the bottom of page 7 and top of page 8, both averages for 2023 should be based on a 5 year phase-in. Accordingly, the figure on that table should state for 2023 ($12) Average Annual Unemployment Premiums Paid by State of $16,269,523.52.

The corresponding change on the table on page 12 would be to state, for 2023 ($12) Total Net Loss to State Government from Taxes and Unemployment Insurance of ($19,137,851.76).

Re: Initiative Petitions 2018-196 through 2018-216

Dear Mr. Halwes,

I write on behalf of Robert Bonney. Mr. Bonney is the Chief Executive Officer of the Missouri Restaurant Association. Please consider this letter and the accompanying studies as his fiscal impact statement as an opponent of Initiative Petitions 2018-196 through 2018-216 (the "Initiative Petitions"). If passed, any of these twenty-one initiatives would have a substantial negative impact on state and local governments, as well as Missouri small businesses. Those effects are both direct (as noted in Section 1) and secondary (as noted in Sections 2 through 5). The direct effects stem from higher labor and contracting costs that the state and its political subdivisions will incur, despite the Initiatives' effort to exclude government workers from the mandate.

The indirect effects will present a debate this Office has seen before. The proponents of the Initiative Petitions will once again rely on data sourced from political activist groups who claim increases in the minimum wage only serve to create new taxable income. The reality is that such groups approach this issue with political bias. Their analysis is one-sided because it completely ignores the fact that a wage increase does not "create" income from thin air; instead, it is an economic transfer from Missouri businesses to workers. Missouri businesses must pay the new wages "created" by the increases. Political activists' models fail to account, then, for two specific manifestations of the "debit" side of this transfer: reductions in employment, and the reduction in corporate income tax paid based upon business done in Missouri.

The failure to account for any employment effect at any proposed wage increase—even a drastic increase of the minimum wage to $13—is particularly puzzling, because Missouri's most populous areas border Illinois and Kansas. These states, respectively, have minimum wages of $8.25 and $7.25. Neither state adjusts the minimum wage for inflation. Likewise, the second effect—loss of corporate income tax revenues—is a mathematical certainty. Missouri businesses will be the source of the wage increase, which will lower their own taxable income. Assuming a one-to-one substitution of "created" wages for lost corporate income, the difference in the rates

at which these two types of income are taxed will result in a net decrease in state revenue. A dollar from increased wages is taxable by state government in Missouri at 6% or substantially less, whereas Missouri's corporate income tax rate is 6.25%.

On top of these two types of negative outcomes—lower employment and lower state tax revenues—there may be second-order effects to small businesses because they lack the access to capital to weather price fluctuations; they may not survive at all because they may not have the flexibility to simply cut employment, shifting their reliance to capital instead of labor resources, or suffering a decrease in production and revenue.

In short, much of the fiscal impact regarding the current crop of wage-related ballot measures is secondary: they cause transfers of wealth within (or out of) the state economy, and those transfers of wealth then create second-order effects for state and local governments via their collection of tax revenues and provision of welfare services for the unemployed or less-employed. Because these fiscal notes call for the Auditor operate in the area of secondary effects, it is critical that she treat both sides of the wealth transfer equally, and refrain from assessing only one half of the wage increase equation.

1. Direct Labor Cost Impact on State and Local Government Budgets

As noted to the State Auditor's Office previously by Dr. David Macpherson, a nationally prominent labor and economics expert, there are two ways to measure labor cost on state and local government budgets. First, one can use the information included in fiscal note responses from state and local government entities. It is important to note that these fiscal notes provide an incomplete and, therefore, too-low estimate of labor cost. Few state and local government entities respond to requests for a fiscal note response, and those that do respond often ignore important effects.

Second, data from the U.S. Census Bureau's Current Population Survey (CPS) can be used to calculate increased labor cost to state and local government entities in Missouri. To combat this time-honored analysis, and in a blatant attempt to manipulate the fiscal note process, the Initiative Petitions provide that they will raise the minimum wage for private workers, but not for workers employed by state or local governmental entities. No conceivable justification exists for solely raising the minimum wage on private businesses. Whatever the disparity between the value of total compensation at a private business and at a government employer, that disparity does not approach the wage adjustments at issue here, ranging from an inflation adjusted wage increase of 51.16% (($13-$8.60)/$8.60) in Initiative Petitions 2018-198 through 2018-201 to a wage increase of 30.17% (($11-$8.45)/$8.45) in Initiative Petitions 2018-213 through 2018-215.

Moreover, it is unreasonable to assume that on a sustained basis public employers, as defined in the Initiative Petitions, would be able to maintain dramatically lower wage levels than private businesses. Public employers would lose staff employable at higher rates in the private market, imposing substantial costs on government productivity. Using the method traditionally employed by labor economists and followed by the Auditor's office, one can calculate the annual

wage costs to state and local governmental entities, based on the annual wage cost for each state and local government worker in the ORG CPS, as detailed on page 6 of Dr. Macpherson's 2012 report, attached hereto as **Exhibit A**. Even if the auditor finds that a specific estimate of costs is not determinable, the auditor should note that state and local government "operating costs could increase by an unknown annual amount that could be significant," through the form of higher wage costs and higher contracting costs.

The proponents of the Initiative Petitions may argue that the Auditor should abandon any state and local cost estimates altogether. The proponents will argue that provisions they have inserted in the statute would mean that state and local government entities will not have to pay higher wages to their employees. Setting aside unjustifiable discrimination against private employers (and "public employees"), the provision is of uncertain legal effect and constitutionality. A "public employer," defined in the initiatives as "the state or a political subdivision of the state" still incurs substantial costs for wages of individuals that are "private employees," rather than "public employees." Cleaning services, food service, and other essential services often rely on state contracts with outside vendors. Sometimes, a contract rate may vary depending on the cost of labor. Even if the contract rate is fixed, it must be re-bid periodically, and that bidding process would take into account the new minimum wage. Plainly, the initiative would impose higher costs for state and local governments in contracting with any private entity and its employees. As a matter of law, it would be insufficient and unfair for the Auditor's fiscal note or summary to simply assume that these costs to state and local governmental entities do not exist.

2. Cost of Unemployment Benefits

a) The effect of inflation on Missouri's minimum wage

CPS–ORG data show that between 2007 and 2015, median nominal wages for adult (25–59 years old) workers in the U.S. grew by 1.68 percent a year. However, Missouri's minimum wage is currently adjusted using "the percentage increase or decrease as of the preceding July over the level as of July of the immediately preceding year of the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W)." Section 290.502, RSMo. Coincidentally (or perhaps not), the CPI-W, over the period from 2006 to 2016, also increased at an average rate of 1.68 percent a year.

Year	CPI-W	Observed inflation %
2006	199.2	
2007	203.7	0.022590361
2008	216.304	0.061875307
2009	210.526	-0.0267124

2010	213.898	0.016017024
2011	222.686	0.041085003
2012	225.568	0.01294199
2013	230.084	0.02002057
2014	234.525	0.019301646
2015	233.806	-0.00306577
2016	234.771	0.004127353

Using Missouri's current inflation-adjusted minimum wage rate and an assumed, constant 1.68 percent increase in the CPI-W, the minimum wage in Missouri will be as follows:

Year	Estimated Minimum Wage
2016	$7.65 (observed)
2017	$7.70 (observed)
2018	$7.85
2019	$8.00
2020	$8.15
2021	$8.30
2022	$8.45
2023	$8.60
2024	$8.75
2025	$8.90
2026	$9.05

b) Calculating job loss attributable to increased minimum wage

At least one outside economist, James Sherk, has already provided an estimate for job loss in Missouri based on a $15 minimum wage. Mr. Sherk calculated the effect of a $15 minimum wage implemented in 2021. Mr. Sherk's figures accounted for inflation by estimating the present value of $15.00 in 2021, rather than estimating an absolute figure for wage inflation in Missouri. Mr. Sherk calculated the present value of $15.00 in 2021 to be $13.57, per hour, based on wage inflation of 1.68 percent. Mr. Sherk evaluated the change from $7.65 per hour to $13.57 per hour (a 77.39% increase), exclusive of agricultural workers. Cumulatively, Mr. Sherk calculated this 77.39 percent increase in wages to reduce employment in the affected workforce by (0.7739*0.677) 52.39%.

Graves Garrett LLC

Mr. Sherk calculated that approximately 40.9% of Missouri's Wage and Salary Workers would be affected by such a $15 minimum wage. Mr. Sherk's calculations reveal that a $15 minimum wage in 2021 would be expected to reduce the number of full-time equivalent jobs in Missouri by approximately 218,000. Based on CPS–ORG data, these figures reveal an affected workforce of approximately 416,086 workers impacted by a $15 minimum wage increase in 2021.

However, in 2014, Dr. Macpherson found, using more conservative, national-level Congressional Budget Office data, that an increase to a $10.10 minimum wage, effective January 1, 2015, would eliminate about 15,700 jobs in Missouri. Dr. Macpherson analyzed the effect of a Missouri $10.10 minimum wage using a model suitable to a national analysis. This analysis predicted a loss of 15,700 Missouri jobs based on a wage increase from $7.50 in 2014 to $10.10 in 2015 (a 34.67% increase).

On the whole, the analysis by Mr. Sherk is more instructive here, since it is more recent, Missouri-specific, and anticipates larger wage changes contemplated by the Initiative Petitions. The most accurate way to determine the estimate of Workers Affected would be to analyze the CPS–ORG data. However, without such data readily available in the time constraints imposed by the fiscal note process, it is reasonable for estimation purposes to assume Mr. Sherk's figures are evenly distributed. Assuming that worker data follows an equal distribution, the Initiative Petitions would be expected to result in the following job losses:

Year of final prescribed wage increase	Wage without IP	Wage mandated by IP	Percentage increase	Percentage of affected workers who lose jobs (Percentage Increase x 0.677 Elasticity)	Estimate of Workers Affected	Estimate of Missouri Workers Unemployed by Initiative
2021	$8.30	$11.00	32.53%	22.02%	174,897	38,512
2022	$8.45	$11.00	30.18%	20.43%	162,262	33,150
2022	$8.45	$12.00	42.01%	28.44%	225,866	64,236
2023	$8.60	$12.00	39.53%	26.77%	212,532	56,895
2023	$8.60	$13.00	51.16%	34.64%	275,061	95,281
2024	$8.75	$12.00	37.14%	25.15%	199,683	50,220
2024	$8.75	$13.00	48.57%	32.88%	261,136	85,861
2025	$8.90	$13.00	46.07%	31.19%	247,695	77,256
2026	$9.05	$13.00	43.65%	29.55%	234,683	69,349

c) The best estimate for a price elasticity of demand for low-skilled labor is -0.677.

As noted by Mr. Sherk, starting wages of $15.00 per hour mean that full-time employee must create at least $38,700 a year in value for his or her employer (including wages, employer payroll taxes, and mandatory healthcare benefits). High minimum wages and mandatory benefit costs make it much harder for less-experienced and less-skilled workers to find jobs, particularly full-time work.

Recent labor economics scholarship has revealed that, accounting for publication bias, a state-specific elasticity of demand for less-skilled workers is, on average, approximately -0.677, though some estimates are even higher, around -1.0.[1] "[E]conomists have extensively studied how businesses respond to higher wages overall, not just minimum-wage increases. On average these studies find a 10 percent increase in labor costs causes firms to reduce employment of less-skilled workers by 6.8 percent in the long run."[2]

While these elasticity estimates are substantial in absolute terms, there is reason to believe that such estimates might still understate the impact of a Missouri state-specific effort to increase the minimum wage. This is so for several reasons. First, traditionally, labor economists view labor as a reasonably difficult input to substitute; however, Missouri businesses have readily available options. There are relatively few barriers to doing business in Missouri's border states, and businesses can easily relocate across a state line to take advantage of more favorable wage (and tax laws). Additionally, substantially raising the cost for Missouri labor, relative to labor sources in other states and other countries, is likely to force many manufacturing jobs in Missouri to disappear entirely. Automation is also a significant risk. The substitution of labor is becoming increasingly easy due to technology advancements and the "sharing" economy, where fewer individuals are "employees" covered by the minimum wage. Finally, a labor "price shock" may result in significant decreases in the demand for goods and services. People make behavioral changes to avoid higher costs, including eating out less often and generally decreasing consumption (or shifting their activities to consumption involving comparatively low amounts of labor) wherever possible.

[1] Sherk, James, "How $15-per-Hour Minimum Starting Wages Would Affect Each State," The Heritage Foundation, http://report.heritage.org/ib4601.

[2] "The coefficients on these estimates imply an elasticity of –0.677 for a study published in 2012 (the most recent year in their data) of long-run unconditional labor demand for low-skilled labor in the U.S., estimated using industry-level administrative panel data and a structural form model." "Estimates that do not account for publication bias tend to slow a long-run elasticity closer to –1.0. See, for example, George Borjas, Labor Economics, 6th ed. (Columbus, OH: McGraw-Hill, 2013), Chapter 4: 'The evidence also suggests that the estimates of the long-run labor demand elasticity cluster around –1, so the long-run labor demand curve is indeed more elastic than the short-run curve.' " Sherk, available at http://report.heritage.org/ib4601.

Graves Garrett LLC

d) Unemployment Benefit Costs

We derived an average unemployment payout by calculating the expected weekly unemployment benefit amount. Based on current data, the expected unemployment weekly benefit amount of a worker making $7.65 an hour, on a 40 hour workweek, is $159.12 per week, for 20 weeks.[3] The expected unemployment weekly benefit amount of a worker making $10.99 an hour is $228.59 per week. The expected unemployment weekly benefit amount of a worker making $11.99 an hour is $249.39 per week. The expected unemployment weekly benefit amount of a worker making $12.99 an hour is $270.19 per week. We assume that workers will seek unemployment insurance for the full twenty weeks authorized under Missouri law, because unemployment attributable to an increase in the minimum wage is structural. In this case, structural unemployment occurs because workers' job skills do not meet the established "price floor" of labor, rendering the worker's skills unmarketable. Assuming an even distribution of workers affected, the average unemployment benefit cost to the state for a worker is calculated as follows:

- For Initiative Petitions 2018-213 through 2018-216, [($159.12+$228.59)/2]*20 = $3,877.10
- For Initiative Petitions 2018-196, 2018-197, 2018-200, 2018-202, and 2018-204 through 209, [($159.12+$249.39)/2]*20 = $4,085.10
- For Initiative Petitions 2018-198, 2018-199, 2018-201, 2018-203, 2018-210 through 2018-212, [($159.12+$270.19)/2]*20 = $4,293.10

Consistent with Dr. Macpherson's 2012 report, it would be reasonable for the Auditor to assume that 35% of unemployed workers will receive unemployment benefits. Combining these numbers leads to the following estimates:

Year of final prescribed wage increase	Estimate of Missouri Workers Unemployed by Initiative	Estimated Unemployment Amount Per Worker	Estimated Total Unemployment Premiums Paid	Average Annual Unemployment Premiums Paid by State
2021 ($11)	38,512	3,877.10	$52,260,206.32	$17,420,068.77
2022 ($11)	33,150	3,877.10	$44,984,052.75	$11,246,013.19
2022 ($12)	64,236	4,085.10	$91,843,669.26	$22,960,917.32
2023 ($12)	56,895	4,085.10	$81,347,617.58	$20,336,904.39

[3] https://labor.mo.gov/DES/Claims/calculator. A 2015 law decreased the unemployment benefit period from 20 weeks to 13 weeks, but the Supreme Court of Missouri struck down the law in July 2016.

2023 ($13)	95,281	4,293.10	$143,167,801.39	$28,633,560.28
2024 ($12)	50,220	4,085.10	$71,803,802.70	$11,967,300.45
2024 ($13)	85,861	4,293.10	$129,013,450.69	$21,502,241.78
2025 ($13)	77,256	4,293.10	$116,083,706.76	$16,583,386.68
2026 ($13)	69,349	4,293.10	$104,202,767.17	$13,025,345.90

3. Impact on State Income Tax Revenue

The 2012 analysis prepared by Dr. Macpherson may also be used as a reference in calculating the effect of the initiative petitions on state income tax revenue. Here, again, it is reasonable to assume that our "affected workers" are evenly distributed, though precise CPS–ORG data would also provide a reliable estimate. Here, the increased income tax revenue is the additional income tax paid by workers whose wages increase. There is a loss of revenue, however, in the form of decreased income tax paid by workers whose wages decrease and businesses who absorb the increased cost of labor, rather than passing it along to customers.

For the purposes of these estimates, we assume that workers work 40 hours a week and 52 weeks per year:

Year of final prescribed wage increase	Estimate of Workers Affected	Estimate of Missouri Workers Unemployed by IP	Estimate of Missouri Workers with Increased Wages	Annual Increase in Wages Paid to Workers who get Wage Increase in Final Year	Annual Decrease in Wages Paid to Workers now Unemployed
2021 ($11)	174,897	38,512	136,385	$382,969,080.00	$108,141,696.00

2022 ($11)	162,262	33,150	129,112	$342,405,024.00	$87,913,800.00
2022 ($12)	225,866	64,236	161,630	$596,737,960.00	$237,159,312.00
2023 ($12)	212,532	56,895	155,637	$550,332,432.00	$201,180,720.00
2023 ($13)	275,061	95,281	179,780	$822,673,280.00	$436,005,856.00
2024 ($12)	199,683	50,220	149,463	$505,184,940.00	$169,743,600.00
2024 ($13)	261,136	85,861	175,275	$774,715,500.00	$379,505,620.00
2025 ($13)	247,695	77,256	170,439	$726,750,021.03	$329,419,584.00
2026 ($13)	234,683	69,349	165,334	$679,192,072.00	$284,885,692.00

These net wage increases will lead to corresponding increases in state income tax collections. Traditionally, it has been assumed that about 50% of affected workers will pay 6% income tax, while the other 50% of workers pay no state income tax. This assumption may be less accurate at the higher wage increases contemplated by the Initiative Petitions. Accordingly, figures are also displayed assuming that about 75% of affected workers will pay 6% income tax, while the other 25% of workers pay no state income tax.

Annual Net Increase in Wages Paid To Workers	Annual Income Tax Increase from Wage Increase (50% pay tax)	Annual Income Tax Increase from Wage Increase (75% pay tax)
$274,827,384.00	$8,244,821.52	$12,367,232.28
$254,491,224.00	$7,634,736.72	$11,452,105.08
$359,578,648.00	$10,787,359.44	$16,181,039.16
$349,151,712.00	$10,474,551.36	$15,711,827.04
$386,667,424.00	$11,600,022.72	$17,400,034.08
$335,441,340.00	$10,063,240.20	$15,094,860.30
$395,209,880.00	$11,856,296.40	$17,784,444.60
$397,330,437.03	$11,919,913.11	$17,879,869.67
$394,306,380.00	$11,829,191.40	$17,743,787.10

Graves Garrett LLC

Based on these figures, Missouri businesses must also decide whether to pass along any increase in wage costs (wages and mandatory payments).[4]

Year of final prescribed wage increase	Annual Cost to Business from Increased Wage	Annual Decreased Corporate Income Tax if cost is fully absorbed	Annual Decreased Corporate Income Tax if cost is 50% absorbed
2021 ($11)	$412,266,214.62	$25,766,638.41	$12,883,319.21
2022 ($11)	$368,599,008.34	$23,037,438.02	$11,518,719.01
2022 ($12)	$642,388,413.94	$40,149,275.87	$20,074,637.94
2023 ($12)	$592,432,863.05	$37,027,053.94	$18,513,526.97
2023 ($13)	$885,607,785.92	$55,350,486.62	$27,675,243.31
2024 ($12)	$543,831,587.91	$33,989,474.24	$16,994,737.12
2024 ($13)	$833,981,235.80	$52,123,827.23	$26,061,913.62
2025 ($13)	$782,346,397.64	$48,896,649.85	$24,448,324.93
2026 ($13)	$731,150,265.50	$45,696,891.59	$22,848,445.80

Assuming businesses absorb half of the cost of increased wages, and 75 percent of affected workers pay the new, higher taxes, the effect on state income tax collections is estimated to be:

Year of final prescribed wage increase	Annual Net Income Tax Revenue Loss
2021 ($11)	($516,086.93)
2022 ($11)	($66,613.93)
2022 ($12)	($3,893,598.78)
2023 ($12)	($2,801,699.93)
2023 ($13)	($10,275,209.23)
2024 ($12)	($1,899,876.82)
2024 ($13)	($8,277,469.02)
2025 ($13)	($6,568,455.26)
2026 ($13)	($5,104,658.70)

[4] A healthcare benefit cost estimate is not available based on the time limitations imposed by this fiscal note.

Graves Garrett LLC

4. Sales tax revenue gain or loss

Projecting any increase in sales tax revenue resulting from an increased minimum wage would require the auditor's office to conclude, based on data separate and apart from the sheer conjecture typically offered by political activist groups: (1) the net effect on consumer disposable income and (2) the percentage of a consumer's disposable income that is spent on goods subject to the sales tax, taking into consideration that the scope of Missouri's sales tax has been truncated by a voter-approved constitutional amendment from November 2016.

Typically, the Auditor's office multiplies the total increase in worker earnings (which should be adjusted for employment reductions) and multiplies the result by 25 percent, then multiplying that figure by the Missouri the population weighted combined average state and local sales tax in Missouri, 7.81%.[5] Based on this estimate, the population-weighted combined average local sales tax is 3.585%.

However, it would be deceptive to fail to account for sales tax losses from workers whose wages are eliminated or sales tax losses from reduced business profits (attributable to the higher wages paid), which will lower spending by business owners. The first figure is calculable by determining the total annual wages (adjusted for employment deductions) for all workers who lose jobs due to a minimum wage hike, multiplied by 25 percent. The second number is calculable by multiplying the total increase in worker earnings (multiplied by 1.0765 to account for Social Security and Medicare taxes) by approximately 15 percent.[6]

Year of final prescribed wage increase	Annual Net Increase in Wages Paid To Workers	New Wages Spent on Sales Tax Items	Annual Cost to Business from Increased Wage	Annual Business Income No Longer Included in Sales Tax Base (50% passed-through)
2021 ($11)	$274,827,384	$68,706,846	$412,266,214.62	($61,839,932)
2022 ($11)	$254,491,224	$63,622,806	$368,599,008.34	($55,289,851)
2022 ($12)	$359,578,648	$89,894,662	$642,388,413.94	($96,358,262)
2023 ($12)	$349,151,712	$87,287,928	$592,432,863.05	($88,864,929)

[5] http://taxfoundation.org/sites/taxfoundation.org/files/docs/LOST--2015.png.
[6] This estimate would also need to be adjusted to reflect certain employers' mandate under the Affordable Care Act to provide healthcare coverage and pay 60 percent of such coverage.

2023 ($13)	$386,667,424	$96,666,856	$885,607,785.92	($132,841,168)
2024 ($12)	$335,441,340	$83,860,335	$543,831,587.91	($81,574,738)
2024 ($13)	$395,209,880	$98,802,470	$833,981,235.75	($125,097,185)
2025 ($13)	$397,330,437	$99,332,609	$782,346,397.64	($117,351,960)
2026 ($13)	$394,306,380	$98,576,595	$731,150,265.51	($109,672,540)

Accordingly, the annual estimations of the effects on state and local revenue, and total state economic impact are as follows:

Year of final prescribed wage increase	Annual Net Income Tax Revenue Loss	Annual Net Effect on State Sales Tax	Total Annual Effect on State Tax Revenue	Total Net Loss to State Government from Taxes and Unemployment Insurance	Annual Net Effect on Local Sales Tax
2021 ($11)	($516,086.93)	$290,127.11	($225,959.82)	($17,646,028.59)	$246,178.86
2022 ($11)	($66,613.93)	$352,067.34	$285,453.41	($10,960,559.78)	$298,736.43
2022 ($12)	($3,893,598.78)	($273,087.10)	($4,166,685.88)	($27,127,603.19)	($231,720.06)
2023 ($12)	($2,801,699.93)	($66,628.31)	($2,868,328.24)	($23,205,232.64)	($56,535.50)
2023 ($13)	($10,275,209.23)	($1,528,364.68)	($11,803,573.91)	($40,437,134.18)	($1,296,849.08)
2024 ($12)	($1,899,876.82)	$96,566.47	($1,803,310.36)	($13,770,610.81)	$81,938.65
2024 ($13)	($8,277,469.02)	($1,110,951.72)	($9,388,420.74)	($30,890,662.52)	($942,665.55)
2025 ($13)	($6,136,139.31)	($761,317.55)	($6,897,456.87)	($23,480,843.55)	($645,993.71)
2026 ($13)	($5,104,658.70)	($468,803.67)	($5,573,462.37)	($18,598,808.26)	($397,789.62)

5. Damage to small business

Additionally, any proponent or opponent fiscal note submission is required, pursuant to Missouri law, to state the impact of the initiative on small businesses. According to analysis by the Employment Policies Institute, 40 percent of the minimum wage workforce is employed at businesses with fewer than 50 employees. [7] The impact on extra costs to small business may be more significant than even this 40% figure suggests. Small businesses are more easily shut down by input price increases than large businesses, which have greater access to capital to weather the

[7] https://www.epionline.org/oped/who-really-employs-minimum-wage-workers/

storm. Clearly, small businesses that do not shut down due to increases in the minimum wage will pay higher costs, estimated at about 40% of business' total increased costs, described above.

Conclusion

In conclusion, the State Auditor should attempt to quantify the increased cost to be borne by state and local government entities through increased contracting costs as a result of an increase to the minimum wage. This direct cost is outlined in Section 1.

Indirect costs are outlined in Sections 2 through 5, and show a net loss. Although such second-order effects more difficult to predict, a net loss is easily the most likely outcome. Significantly, this result is only obtainable if the Auditor reviews both the "credit" and "debit" sides of the transfer of wealth from businesses to workers. The Auditor should refrain from taking the proponents' likely invitation to consider and present only the "credit," side, and should attempt to provide a complete picture of all effects of a minimum wage increase, including the loss of revenue to state and local governments from individuals who lose employment. Only conveying (or quantifying) the potential for gain, without fairly conveying the likelihood of net loss, would be deceptive and unfair.

The State Auditor's previous 2018 fiscal notes are a good model. Each of the fiscal notes for the Initiative Petitions should follow the already-established format and state that:

> "[O]perating costs could increase by an unknown annual amount that could be significant. State and local government tax revenue could change by an unknown annual amount ranging from a $## million decrease to a $## million increase depending on business decisions."

Should you desire further detail or have any questions about this fiscal impact statement, please do not hesitate to contact me.

Sincerely,

Edward D. Greim

ABOUT THE MISSOURI RESTAURANT ASSOCIATION

With origins dating back to 1916, the Missouri Restaurant Association (MRA) is a statewide trade association representing over 1,500 member establishments. The association's membership is diverse, and includes full service, fast casual, and quick service restaurants, cafeterias, hotels, schools, institutions, contract feeders, and ancillary foodservice providers such as theme parks. The association has been successful in securing support from virtually every segment of the foodservice and hospitality industry.

MRA includes seven chapters as extensions of the parent organization, each with its own Officers, Board of Directors, and limited budget. The association is governed by a Board of Directors comprised of five Officers, 33 Directors, and each President of the seven affiliated chapters.

MRA is dedicated to serving the needs of the foodservice and hospitality industry, enhancing and improving its growth and development, assisting and educating its members in operating more effectively, improving the political and social environment in which the industry conducts business, for the benefit of its members, patrons, employees, and the well-being of the community.

David A. Macpherson is the E.M. Stevens Professor of Economics at Trinity University. He received undergraduate and doctoral degrees in economics from Pennsylvania State University.

Dr. Macpherson has published over 60 articles in leading economics and real estate journals including Review of Economics and Statistics, Industrial and Labor Relations Review, Journal of Labor Economics, Journal of Human Resources, and Journal of Real Estate Economics and Finance. His research has been funded by a variety of entities including the National Science Foundation, Florida Legislature, and the National Association of Realtors. He is co-author of the undergraduate labor economics text, Contemporary Labor Economics, as well as the principles of economics text, Economics: Private and Public Choice. He is included in Who's Who in Economics, Fourth Edition, which includes the 1,200 most frequently cited economists.

THE IMPACT OF A $10.10 MINIMUM WAGE ON JOBS AND TAXPAYER COSTS IN MISSOURI

June 2014

Economic Analysis by **Dr. David Macpherson**

Index

Executive Summary 4
Results 5
Technical Appendix 7

EXECUTIVE SUMMARY

Missouri's minimum wage of $7.50 is linked to rise in most years with the inflation rate. But some state legislators and labor unions would like to raise that figure even higher. For instance, a recent labor union-organized bus tour in the state promoted a $10.10 minimum wage in St. Louis.

Proponents have enthusiastically pointed to the benefits of the $10.10 policy. But there's been far less discussion of the costs involved with a $10.10-an-hour minimum wage—both the cost on employment, and the cost to taxpayers.

In this study, labor economist David Macpherson of Trinity University uses Census Bureau data to estimate the impact on Missouri's labor market and budget from raising the minimum wage to $10.10 an hour. He also provides separate results for the St. Louis metropolitan area.

Dr. Macpherson's employment estimates follow the methodology used by the nonpartisan Congressional Budget Office in its report earlier this year estimating the impact of a $10.10 minimum wage nationwide, which in turn relied on 60 different empirical studies to formulate its estimates.

Statewide, he finds that over 15,000 jobs would be lost at the $10.10 wage level—with 9,300 of those jobs being held by women. In the St. Louis metropolitan area, approximately 4,800 jobs would be lost from a $10.10 minimum wage.

The cost to taxpayers would be significant: There are approximately 40,000 state and local employees whose wages would be affected by the $10.10 increase in Missouri, for a combined cost to taxpayers of $87 million annually.

Raising wages is an admirable goal, but the evidence suggests that accomplishing this goal with a blunt wage mandate could do more harm than good.

RESULTS

The minimum wage is one of the most hotly-debated topics in the political world. Some legislators claim that a higher base wage will stimulate the economy; others claim that it will reduce jobs when affected employers can't offset the higher costs through higher prices.

Economists, who have studied the issue since the late 1940s, tend to take a skeptical view of minimum wage increases. Since the early 1990s, for instance, roughly 85 percent of the most credible research on the minimum wage points to job loss for less-skilled groups. The nonpartisan Congressional Budget Office (CBO), in an evaluation of President Obama's proposed $10.10 minimum wage increase, reviewed 60 different studies and concluded that the policy would eliminate 500,000 jobs if enacted.

The estimates that follow, of the employment impact of a higher minimum wage on Missouri's labor market, were performed by Dr. David Macpherson of Trinity University. Dr. Macpherson followed closely the methodology used by the CBO in its 2014 report. Dr. Macpherson also estimates the taxpayer costs of a higher minimum wage, as many state and local public employees will see their earnings increase when the minimum wage rises.

Dr. Macpherson's methodology is presented in detail in a technical appendix.

Estimated Employment Effects of a $10.10 Minimum Wage in Missouri

Statewide, Dr. Macpherson finds that increasing the minimum wage to $10.10 would eliminate over 15,000 jobs—approximately 60 percent of which are jobs held by women. The bulk of the job losses would be concentrated among individuals with a high school degree or less, and among people who work in the retail or leisure & hospitality industries.

(Note: Totals have slight discrepancies due to rounding.)

City-Specific Minimum Wage Employment Impacts

The city of St. Louis has been the subject of a number of protests calling for a higher minimum wage. Dr. Macpherson analyzed the employment impact of a $10.10 minimum wage in the St. Louis metropolitan area, providing breakouts by gender and education where the data permits. He estimates that the wage hike would eliminate approximately 5,000 jobs—just over half of which would be jobs held by women.

RESULTS CONTINUED

Missouri Taxpayer Costs of a $10.10 Minimum Wage

Dr. Macpherson estimates that approximately forty thousand state & local public employees would be affected by a minimum wage increase to $10.10 an hour. These additional wage costs translate to new costs for state and local taxpayers. Following the methodology described in detail in the technical appendix, Dr. Macpherson estimates both the straight wage cost of a $10.10 minimum wage, as well as the total compensation cost with Social Security, Medicare, workers compensation, and unemployment insurance included. Statewide, taxpayers would shoulder an additional $87 million in costs if the base wage was increased to $10.10 an hour and public employees were covered by the new wage.

Missouri Taxpayer Costs of a $10.10 Minimum Wage

TECHNICAL APPENDIX

Estimating Employment Loss and the Cost to State and Local Government of an Increase in the Minimum Wage

Dr. David Macpherson
E.M. Stevens Professor of Economics
Trinity University

This paper describes how we estimate the employment loss and the cost to state and local governments of a proposed increase in the minimum wage effective on January 1, 2015.

Data and Sample

First, we use data from the Current Population Survey (CPS) Outgoing Rotation Groups (ORG) from January 2011 through December 2013. For each worker in the sample, we calculate their wage rate. We also adjust the wage rate to reflect a forecast of wages in 2015. This is done in two steps. First, based on legislation enacted as of April 2014, we estimate the minimum wage that would be in effect in January 2015 for each state and city that we consider. If a state or city has an indexed minimum wage, we increase the January 2014 state or city minimum wage by the Congressional Budget Office (CBO) inflation forecast for 2014 of 1.7%.

Since we use data from 2011 through 2013, we also follow the CBO approach for forecasting what the wage distribution would be in 2015. This is done in two steps. First, we adjust wages observed prior to 2013 to reflect 2013 minimum wage legislation. For example, if the minimum wage in a state was $7.25 in 2011 and grew to $8.00 by 2013, anyone who earned between $7.25 and $8.00 in 2011 would have their wage increased to $8.00. After wages are adjusted to 2013 levels, we assume that all wages grow by 2.9% in 2014. Using the resulting 2015 distribution of wages, we adjust for minimum wage legislation that would increase the minimum between 2013 and 2015. Anyone earning a wage between the 2013 and 2015 minimum wage is assigned a wage matching the 2015 minimum wage.

After generating the forecast 2015 distribution of wages reflecting wage growth and existing minimum wage legislation, we identify workers who would be affected by additional changes to the 2015 minimum wage as those with wages between the predicted minimum wage legislated for 2015 (or up to $.25 below it) and the proposed minimum.

To estimate the number of affected workers, we take two steps. First, for each state, we estimate the number of affected workers for 2013. Second, we adjust the weights in the 2011 and 2012 data so that the state-specific number of affected workers implied by the 2011 and 2012 data matches that for 2013. This adjustment is designed to correct for the changing economic climate as the economy recovers from the great recession and to generate estimates that are as close as possible to the most recent data (2013). After we adjust the 2011 and 2012 weights, we estimate the number of affected workers by summing their earnings weights and dividing the total by 36 (the number of months of data).

[1] Also, following CBO, anyone earning up to $.25 less than the 2011 minimum wage would have their wage increased by the amount that the minimum wage increased (i.e. a $7.00 wage would be increased to $7.75 in this example). This approach is used to adjust for the fact that many workers round their answers when asked about their wage.

TECHINCAL APPENDIX CONTINUED

Employment Loss

To estimate employment loss, for each affected worker we compute:

L = e *(Proposed Min Wage /Min Wage 2015 – 1)

where e is an assumed elasticity of employment with respect to changes in the minimum wage, Min Wage 2015 is the minimum wage currently legislated for 2015, and Proposed Min Wage is the minimum wage that is being proposed for 2015. Thus, for example, if a worker is projected to earn the federal minimum of $7.25 in 2015, the expected reduction in employment resulting from a $10.10 minimum wage in 2015 if e=.45 is .45*(10.10/7.25 – 1) = .18. That is, for every 100 workers currently earning the federal minimum, the expectation is that 18 would lose a job if the minimum wage elasticity is .45.

To estimate the aggregate employment loss in the economy, we use earnings weights to sum L across workers. We also follow the Congressional Budget Office (2014) and use an elasticity of 0.15 for non-teenagers and 0.45 for teenagers.

Cost to State and Local Government

We use the same data to estimate the cost to state and local government of a proposed minimum wage hike. We apply the same definition of affected workers described above and estimate the number of state and local government workers affected by a minimum wage hike. We do not, however, assume that there is any job loss for state and local workers as we do not have an appropriate elasticity estimate specific to state and local workers. To the extent that state or local governments reduce hours or employment in response tothe minimum wage hike, our estimate of the cost of the hike would be overstated.

To estimate the increase in annual payroll cost resulting from an increase in the minimum wage, we estimate the increase in annual cost for each worker as:

(Proposed Min Wage-Min Wage 2015)*weekly hours*52

We then multiply the increase in annual cost by the earnings weight for each worker and sum across workers. Since an increase in wages also requires increased employer contributions for Social Security, Medicare, workers' compensation and unemployment insurance, we apply an estimate of the payroll tax rate for these mandatory programs to calculate the additional cost for these programs.

For each state and city considered, we provide tables summarizing the number of affected workers, employment loss, and the distribution of employment loss by sex, education, race, age and industry. Given that we use three years of data, a rule of thumb for minimum sample size required to achieve a reasonably accurate estimate of the employment loss is to require at least 30,000 people be in the relevant category. For example, if there are fewer than 30,000 people projected to be in a particular industry category, the Bureau of Labor Statistics would not report the estimate due to a lack of reliability based on the variance of the estimate relative to its mean.

In addition to the estimate of employment loss, for each state or city considered, we estimate the number of state and local workers that would be affected by the minimum wage hike and the total annual cost to government in terms of wages and total compensation. As with the employment estimates, we advise caution in interpreting estimates that are based on fewer than 30,000 affected workers.

[3] Congressional Budget Office, "The Effects of a Minimum-Wage Increase on Employment and Family Income," February 2014.

[4] For workers paid by the hour the reported hourly wage was used. For workers who are not paid by the hour, we calculate the hourly wage by dividing usual weekly earnings by usual weekly hours. Overtime pay was calculated as time and one-half for hours above 40 hours for hourly workers.

[5] The assumed payroll tax for Medicare and Social Security is 7.65 percent. To estimate the payroll tax for workers' compensation and unemployment insurance, we use unpublished data from the 2010 Employer Cost of Employee Compensation database for state and local workers in the relevant region in 2010.

FISCAL ANALYSIS
OF
PROPOSED STATUTORY INITIATIVE PETITIONS 2012-084 AND 2012-085

Prepared for

Victor Allred versus Robin Carnahan and Thomas Schweich
Circuit Court of Cole County, Missouri

FISCAL ANALYSIS
OF
PROPOSED STATUTORY INITIATIVE PETITIONS 2012-084 AND 2012-085

I. Introduction

This report was undertaken at the request of counsel representing plaintiffs in the case of Victor Allred versus Robin Carnahan and Thomas Schweich. As part of the basis of the lawsuit, the plaintiffs allege that the fiscal note summaries for proposed statutory initiative petitions 2012-084 and 2012-085 are insufficient and unfair. I was asked by counsel to evaluate the fiscal impact of proposed statutory initiative petitions 2012-084 and 2012-085.

The results of my analysis indicate:

(1) labor costs to state and local government entities, based on state auditor fiscal notes, will rise by more than $1,352,182. A more inclusive estimate indicates that state and local government labor costs will increase by $16,003,712;

(2) unemployment benefit costs will rise by $4,397,510 during the first year of the minimum wage increase;

(3) individual income tax revenue will rise by at most $4,078,088;

(4) the loss in corporate income tax revenue could be as high as $9,243,105;

(5) state and local sales tax revenue will rise by at most $2,919,327;

(6) during the first year: state and local governments will incur increased costs of $20,401,222; the change in state and local government revenue will

range from -$2,245,690 to +$6,997,415; and the net state and local government fiscal impact will range from -$22,646,912 to -$13,403,807.

The report is organized as follows. My qualifications to prepare this report are contained in Section II. Section III describes the data and records I relied upon for this report. Section IV reviews the estimated fiscal impact of proposed statutory initiative petitions 2012-084 and 2012-085. A summary and my conclusions are provided in Section VI.

II. Qualifications

I am currently the E.M. Stevens Professor of Economics at Trinity University in San Antonio, Texas. Previously, I was employed by Florida State University as Director of the Pepper Institute on Aging and Public Policy and the Rod and Hope Brim Eminent Scholar in Economics. I have taught both undergraduate and graduate Econometrics (statistical analysis of economic data), and Labor Economics. I have published over 50 articles in peer-reviewed professional journals.

I am currently serving on the editorial board of the *Journal of Forensic Economics*, which is a peer-reviewed journal. I have also served as a reviewer or 'referee' for 24 peer-reviewed journals, including the *Journal of Human Resources, Journal of Labor Economics, Quarterly Journal of Economics,* and the *Review of Economics and Statistics*. Based upon these experiences, I am very familiar with the scholarly and professional research process and the concept of peer review.

I have prepared numerous analyses and reports that use statistical methods as applied to specific questions. I have been responsible for developing the techniques and approaches required for these analyses. I routinely use computers and statistical software packages to assist me in my analytical work. I have been qualified as an expert witness on statistical analysis of employment discrimination and economic damages in state courts in Florida and Georgia and Federal Courts, and I have given expert testimony. I have prepared analyses and offered testimony on behalf of both plaintiffs and defendants.

Details of my qualifications are reflected in my current resume and legal cases, attached as Appendix A to the report.

III. Data and Records

I reviewed the following materials in preparing this report.

- Plaintiff's Complaint
- Material cited in footnotes below.

IV. Fiscal Impact

A. Overview

The proposed statutory initiative petitions 2012-084 and 2012-085 contain many elements in common. Both initiatives would increase the Missouri minimum wage to $8.25 per hour, alter the exemption for retail and service firms, raise the cash wage of tipped workers from 50% to 60% of the minimum wage, and increase the statute of limitation from two to three year for underpayment claims.

The initiatives differ in their linkage to the federal minimum wage. Initiative petition 2012-084 requires that the state minimum wage be automatically increased to the

federal minimum wage if it is higher than the state minimum wage. Initiative petition 2012-085 does not have such a linkage. It only requires that workers be paid the higher of the state minimum wage or the federal minimum wage. The linkage to the federal minimum wage will cause the state minimum wage to be higher under initiative petition 2012-084 over time. This is because the state minimum wage, in contrast to the federal minimum wage, is adjusted for inflation as measured by the Consumer Price Index.

An increase in the minimum wage in Missouri will affect state and local government entities in two ways. First, it will directly increase the cost of labor to state and local government entities. This will occur due to the increase in wages of state and local government workers earning between the existing minimum wage of $7.25 and the new minimum wage of $8.25.[1] In addition, workers laid off due to the minimum wage increase can collect unemployment benefits. The state government will bear the cost of unemployment benefits of these workers for the first 20 weeks. Second, state and local government may gain increased revenue through higher income tax and sales taxes paid by workers affected by the minimum wage who remain employed. However, state and local government will suffer reduced tax revenue to the extent the higher wage cost lowers profits of businesses.

The following sections estimate the cost and revenue effects to state and local government entities of the proposed minimum wage increase.

[1] Information about the minimum wage in Missouri is available at http://www.labor.mo.gov/DLS/minimumwage/.

B. Direct Labor Cost Impact on State and Local Government Budgets

There are two possible ways to measure the direct labor cost on state and local government budgets. First, one can use the information included in the fiscal notes prepared by the State Auditor regarding the proposed initiatives. It is important to note that the fiscal notes provide an incomplete and thus too low estimate of the direct labor cost. The fiscal notes indicate that the Office of Administration's (OA) Division of Personnel reported that as of September 2011 there were 834 state workers who would be affected by an increase of the minimum wage to $8.25 and the "approximate annual cost" would be more than $540,000.

This OA estimate excludes seasonal workers such as State Fair employees, State Parks Employees, and tax season staff. The Division of Revenue noted its labor cost would rise by $40,000. The Division of Natural Resources stated they have over 500 workers who would be affected by the increase, but did not provide an estimate of the cost. The State Fair hired 745 workers that would be affected, but no cost estimate was provided.

Thus, the cost to state government, based on the fiscal notes, would be more than $580,000.

The fiscal notes also provide an incomplete and thus too low measure of the cost to local government and public educational institutions. Many cities and educational institutions did not respond to Office of Auditor's survey or provide an estimate of the cost of the higher minimum wage. The City of Columbia, City of Jefferson, City of

Joseph, Linn State Technical College, and Metropolitan Community College did provide such an estimate. The total cost to these five institutions is $772,182.

Based on the fiscal notes, the cost to state and local government entities of the increase in the minimum wage to $8.25 will be more than $1,352,182.

Second, data from the U.S. Census Bureau's Current Population Survey (CPS) can also be used to calculate the cost of the increased labor cost to state and local government entities in Missouri. Using the data from January 2010 to December 2011 Outgoing Rotation Group (ORG) CPS, I calculated that 17,089 state and local government workers would be affected by the minimum wage increase. I defined affected workers as those individuals earning between $7.00 and $8.24 per hour. Though the minimum wage was $7.25 per hour during this period, I also included those workers reporting earnings of $7.00 to $7.24 since some individuals may round their wage rate. I calculated the annual wage cost for each state and local government worker (i) in the ORG CPS as:

$$Annual\ Wage\ Cost_i = (\$8.25 - current\ wage_i) * weekly\ hours_i * 52.$$[2]

The average annual wage cost increase was $870. I summed the cost over each worker (i) to obtain the total wage cost to state and local government entities in Missouri of $14,866,430.

The increased wage cost is not the only labor cost to state and local government entities of the minimum wage increase. Employers are required to pay 7.65% of their wage costs in Social Security and Medicare taxes. Thus, the total labor cost of the minimum wage increase will be 1.0765 times $14,866,430 or $16,003,712.

---

[2] I assume that persons reporting an hourly wage rate between $7.00 and $7.24 are actually earning $7.25 per hour.

C. Unemployment Benefit Impact

The higher minimum wage will cause firms to reduce their level of employment.[3] As a result, the number of unemployed workers will increase. Thus, another important fiscal cost of the minimum wage increase is the cost of the unemployment insurance benefits for the workers laid off as a result of the minimum wage increase.

To calculate the cost to the unemployment benefits program, I first calculated the number of workers laid off. To do so, I calculated a probability of job loss for each affected Missouri worker (i) in the January 2010 to December 2011 ORG CPS:

$$Probability\ Job\ Loss_{\ i} = \frac{(\$8.25 - Current\ Wage_i)}{Current\ Wage_i} * elasticity_i.$$

I used the preferred employment elasticity (i.e., sensitivity of employment to wage changes) contained in Sabia and Burkhauser (2010), which was -0.6 for individuals aged 16 to 29 without a high school degree and -0.2 for all other individuals. The sole exception was for state and local government workers, where I assumed an elasticity of zero.[4] The sum across all affected workers yielded an estimated job loss of 5,745 jobs.

The next step was to calculate the weekly benefit for the average unemployed worker. Using the benefits calculator on the Missouri unemployment benefits web site and the wage income of average private-sector affected worker ($10,937), yields an average weekly benefit of $109.36[5]. The state of Missouri pays the first 20 weeks of benefits.[6] Thus, each eligible unemployed worker could receive a total of $2,187.20 in

---

[3] For a survey of research regarding the effect of the minimum wage on employment, see David Neumark and William L. Wascher, *Minimum Wages* (Cambridge, MA: MIT Press, 2008).
[4] Joseph J. Sabia and Richard V. Burkhauser, "Minimum Wages and Poverty: Will a $9.50 Federal Minimum Wage Really Help the Working Poor?" *Southern Economic Journal* (January 2010): 592-623.
[5] http://www.labor.mo.gov/DES/Claims/calculator.asp
[6] See http://www.labor.mo.gov/DES/Claims/

benefits paid for by the state of Missouri. These jobs are permanently eliminated and so it is appropriate to calculate the full amount of benefits for each worker.

Unemployment insurance, however, does not cover all unemployed workers. For example, it does not cover people who leave a job voluntarily, people looking for their first job, and re-entrants who previously left the labor force voluntarily. Furthermore, some individuals don't apply for benefits even though they are eligible. I assume that 35% of the unemployed workers will receive unemployment benefits based on analysis by Wenger (2001).[7]

The last step is to calculate the total cost to the Missouri unemployment benefits program. This done by multiplying the number of jobs lost (5,745) times the average benefit amount ($2,187.20) times the percent of unemployed individuals collecting benefits (35%). This calculation yields a figure of $4,397,510. This cost would be borne only during the first year of the minimum wage increase. The inflation adjustments in the minimum wage will also yield costs to the unemployment insurance program, but it is not possible to estimate the amount.

D. Impact on State Income Tax Revenue

The state of Missouri will gain increased revenue through higher income tax taxes paid by workers affected by the minimum wage who remain employed. However, it will

[7] Jeffery Wenger. "Divided We Fall: Deserving Workers Slip through America's Patchwork Unemployment Insurance System." *Economic Policy Institute*, 2001. Sabia and Burkhauser (2010) make the same assumption in their calculation of the amount of unemployment benefits generated by a minimum wage increase.

suffer reduced corporate income tax revenue to the extent the higher wage cost lowers profits of businesses.

To calculate the impact on individual income tax revenue, I again used data from January 2010 to December 2011 ORG CPS. I defined affected workers as those Missouri individuals earning between $7.00 and $8.24 per hour.[8] I used the following formula to estimate the change in income tax revenue:

$$\Delta Tax\ Revenue_i = (Tax_After_i - Tax_Before_i) - Prob_Job_Loss_i * Tax_Before_i,$$

where Tax_After_i is the income tax paid by worker i after the minimum wage increase. Tax_Before_i is the income tax paid by worker i after the minimum wage increase, and $Prob_Job_Loss_i$ is the probability of job loss for worker i. The first term shows the change in individual income tax revenue assuming no job loss and the second term shows the loss in tax revenue due to the employment loss caused by the minimum wage increase.

The income tax calculations were based on two assumptions.[9] First, the 50% percent of affected workers who were under the age 25 who were assumed to be dependents on another person's tax return. As a result, it was assumed that the affected workers' earnings were taxable at the maximum Missouri income tax rate of 6% both and after the minimum wage increase.[10] Second, all persons age 25 and older were assumed to be paying little or no income tax after exemptions and deductions. Thus, about 50% of the earnings increase will be taxed at a rate of 6%.

---

[8] I again assume that persons reporting an hourly wage rate between $7.00 and $7.24 are actually earning $7.25 per hour. The annual earnings level was calculated as the worker's wage rate times usual weekly hours worked times 52.

[9] The same assumptions are used in the State Auditor's fiscal notes for the initiatives.

[10] This assumption will overstate the revenue increase as 20% of affected workers under the age 25 are living by themselves and some of these individuals will not be a dependent on another person's tax return.

The tax calculations reveal an increase in income tax revenue increase to the state. Assuming no workers were laid off by the minimum wage increase, income tax revenue would rise by $6,043,534. However, the state will lose $1,965,446 in income tax revenue due to the lost earnings of private-sector workers no longer employed due to the minimum wage hike.[11] Thus, the net increase in individual income tax revenue is $4,078,088.

Businesses have three options to respond to the higher labor costs of a higher minimum wage. They can reduce their profits, raise prices, or lay off workers. Based on the 2010-2011 ORG CPS data, the minimum wage increase will raise private-sector labor costs by $192,620,900 if employment levels are not reduced. However, labor costs will be lowered by $55,240,790 due to the reduction in employment. Thus, labor costs will, on net, rise by $137,380,110. These increased labor costs may be either passed on to consumers through higher prices or reduced profits or more likely some combination of higher prices and reduced profits. Assuming that businesses absorbed all of the higher costs through reduced profits, the corporate income tax revenue would fall by the Missouri corporate income tax of 6.25% times the rise in labor costs of $137,380,110 * 1.0765 (to account for employer-paid Social Security and Medicare taxes) or $9,243,106.[12] Alternatively, if half of the higher labor costs were passed on to consumers, then corporate income tax revenue would fall by $4,621,553.

[11] The probability of job loss was calculated in the same manner as in the prior section.
[12] The corporate income tax for Missouri is available at: http://dor.mo.gov/business/corporate/

E. Impact on State and Local Sales Tax Revenue

To calculate the impact on state and local sales tax revenue the following approach was undertaken.[13] First, the total increase in worker earnings, adjusted for employment reductions, was calculated using the 2010-2011 ORG CPS. This figure was $152,246,540. Second, the increase in Missouri taxable sales was calculated as 25% of the earnings increase or $38,061,635. Third, the increase in sales tax revenue was calculated by multiplying the taxable sales change times the average state and local rate of 7.67% or $2,919,327.[14]

The higher minimum wage may decrease sales tax revenue to the extent that it reduces business profits, which will lower spending by business owners.

VI. Summary and Conclusions

I was asked by counsel to evaluate the fiscal impact of proposed statutory initiative petitions 2012-084 and 2012-085.

The results of my analysis indicate:

(1) labor costs to state and local government entities, based on state auditor fiscal notes, will rise by more than $1,352,182. A more inclusive estimate indicates that state and local government labor costs will increase by $16,003,712;

[13] The same general approach is used in the State Auditor's fiscal notes for the initiatives.
[14] The average rate comes from http://taxfoundation.org/news/show/27023.html

(2) unemployment benefit costs will rise by $4,397,510 during the first year of the minimum wage increase;

(3) individual income tax revenue will rise by at most $4,078,088;

(4) the loss in corporate income tax revenue could be as high as $9,243,105;

(5) state and local sales tax revenue will rise by at most $2,919,327;

(6) during the first year: state and local governments will incur increased costs of $20,401,222; the change in state and local government revenue will range from -$2,245,690 to +$6,997,415; and the net state and local government fiscal impact will range from -$22,646,912 to -$13,403,807.

Presented, "Employee Turnover in the Long-Term Care Industry," at Academy Health Annual Research Meetings, June 2007.

Presented, "Participant Direction in Defined Contribution Pension Plans," at International Atlantic Economic Society meetings, October 2006.

Presented, "The Risk and Return of Pension Investments in Employer Stock," at International Atlantic Economic Society meetings, October 2005.

Presented, "Replacing Earnings After Termination: Evidence from the Displaced Worker Survey," at the Allied Social Science Association/National Association of Forensic Economics, January 2002.

Presented, "Labor Market Transitions of Older Workers," at the Allied Social Science Association/Society of Government Economists meetings, January 1999.

Presented, "Why has the Loss in Pension Coverage Accelerated Among Less Educated Workers?" at the American Economic Association Meetings, 1995.

Presented, "Wages and Gender Composition: Why Do Women's Jobs Pay Less?" at the American Economic Association Meetings, 1994, with Barry Hirsch.

Presented, "Pensions, Labor Turnover, and Employer Size" at the American Economic Association Meetings, 1993, with William Even.

Presented, "Why Did Male Pension Coverage Decline in the 1980s?" at the American Economic Association meetings, 1992, with William Even.

Participation in Regional Meetings

Presented "Unions and Pension Performance: The Role of Pension Design," at Southern Economics Association meetings, November 2009.

Panel member, "Recent Federal Reserve Policy: An Evaluation" at Southern Economics Association meetings, November 2009.

Discussant, "Topics in Health Economics," at Southern Economics Association meetings, November 2009.

Discussant, "Teacher Pay, Principals, and Schooling," at Southern Economics Association meetings, November 2009.

Presented "Is Bigger Still Better?: The Decline of the Wage Premium at Large Firms," at Western Economic Association meetings, July 2009.

Presented "Is Bigger Still Better?: The Decline of the Wage Premium at Large Firms," at Eastern Economic Association meetings, February 2009.

Panel Discussant at the Southern Economic Association meetings, November 2008.

Presented "Is Bigger Still Better?: The Decline of the Wage Premium at Large Firms," at Southern Economic Association meetings, November 2008.

Presented "The Growth of Participant Direction in Defined Contribution Pensions," at Western Economic Association meetings, July 2008.

Chair "Pensions and Retirement" Session at Southern Economic Association meetings, November 2007.

Presented "The Growth of Participant Direction in Defined Contribution Pensions," at Southern Economic Association meetings, November 2007.

Presented, "Participant Direction in Defined Contribution Pension Plans," at Southern Economic Association meetings, November 2006.

Panel Discussant, Southern Economic Association meetings, November 2005.

Presented, "Do Pensions Impede Phased Retirement?" at the Southern Economic Association meetings, November 2004.

Presented, "When Will the Gender Gap in Retirement Income Narrow?" at the Southern Economic Association meetings, November 2003.

Presented, "How Will the Growth of DC and 401(k) Plans Affect Pension Income?" at the Southern Economic Association meetings, November 2002.

Presented, "Racial Composition, Wages, and Quality Sorting," at the Southern Economic Association meetings, November 1999.

Presented, "Racial and Ethnic Differences in Pension Coverage and Benefit Levels," at the Southern Economic Association meetings, November 1998.

Presented, "Factors Influencing Participation and Contribution Levels in 401(k) Plans," at the Western Economics Association meetings, July 1998.

Presented, "Aging at Work: Employment Determination, Firm Strategies, and Public Policy in the United States," at the Western Economic Association meetings, July 1994.

Presented, "Why Did Male Pension Coverage Decline in the 1980s?" at the Western Economic Association meetings, July 1992.

Presented "Plant Size and the Decline of Unionism," at the Southern Economic Association meetings, 1989, with William Even.

Panel Discussant, Southern Economic Association meetings, November 1989.

Presented "The Labor Force Participation and Earnings Profiles of Married Female Immigrants," at the Southern Economic Association meetings, November 1988.

Presented "Pensions, Screening, and the Gender Wage Gap," at the Southern Economic Association meetings, November 1988.

Session Chair and Panel Discussant at the Southern Economic Association meetings, November 1988.

Participation in Invited Seminars, Conferences, and other Presentations

Presented, "Teaching Macroeconomics During Troubled Times," at Creative Ideas for Your Basic Economics Course Conference at Florida State University, February 2012.

Presented, "Participant Direction in Defined Contribution Pension Plans," at Pennsylvania State University, April 2010.

Presented, "The Parallels Between the Japanese Economic Crisis of the 1990s and the US Today" at Creative Ideas for Your Basic Economics Course Conference at Florida State University, February 2010.

Chair "Minimum Wage & EITC" Session at Society of Labor Economists meetings, May 2009.

Presented "Participant Direction in Defined Contribution Plans," at Lehigh University, April 2009.

Presented "Is Bigger Still Better?: The Decline of the Wage Premium at Large Firms," at Association of Private Enterprise Education meetings, April 2009.

Presented "The Growth of Participant Direction in Defined Contribution Pensions," at Trinity University, October 2008.

Presented "The Growth of Participant Direction in Defined Contribution Pensions," at Georgia State University, April 2008.

Presented "The Growth of Participant Direction in Defined Contribution Pensions," at Association of Private Enterprise Education meetings, April 2008.
Presented, "Improving Pension Coverage at Small Firms," at Hudson Institute, May 2006.

Presented, "Participant Direction in Defined Contribution Plans," at Society of Labor Economics meetings, May 2006.

Presented, "Participant Direction in Defined Contribution Plans," at Association of Private Enterprise Education meetings, April 2006.

Presented, "Participant Direction in Defined Contribution Plans," at University of Wisconsin-Milwaukee, April 2006.

Invited Panel Participant for Pepper Foundation and Center Symposium on pension reform, Washington, DC, February 2006.

Presented, "The Risk and Return of Pension Investments in Employer Stock," at West Virginia University, April 2005.

Presented, "The Risk and Return of Pension Investments in Employer Stock," at the University of Kentucky, November 2004.

Presented, "The Causes and Consequences of Company Stock Holdings in Pension Funds," at the Federal Reserve Bank of Atlanta, April 2004.

Presented, "The Causes and Consequences of Company Stock Holdings in Pension Funds," at the University of Oklahoma, February 2004.

Presented, "Tracking Union and Nonunion Wages in the U.S.: Can the Evidence be Reconciled?" at the Middlebury Annual Conference on Economic Issues, April 2002.

Presented, "How Will the Growth of DC and 401(k) Plans Affect Pension Income?" at the Miami University Center for Pension and Retirement Research Conference, June 2001.

Presented, "Benefits and Worker Productivity," Benefits for the Workplace of Tomorrow Conference, Wharton School, University of Pennsylvania, May 2001.

Participant, Innovations in Managing the Financial Risks of Retirement Conference, Wharton School, University of Pennsylvania, May 2000.

Presented "Using Hi-Tech in Large Lectures," at Association of Private Enterprise Education meetings, April 2000.

Presented "Employee Participation in 401(k) Plans," at University of Wisconsin-Milwaukee, October 1999.

Presented "Gender, Race, and Ethnicity in the Labor Market," as part of the Smith Chair course in Labor Economics at Brigham Young University, September 1999.

Presented, "The Decline in Pension Coverage Among Less Educated Workers," at the Florida State University Economics Department Seminar Series, 1996.

Presented, "Children's Effects on Women's Labor Market Attachment and Earnings" at the Conference on the Changes in Working Time in Canada and the United States, Canadian Employment Research Forum, 1996.

Presented, "Earnings, Rents, and Competition in the Airline Labor Market" at the Ohio State University Economics Department Seminar Series, 1996.

Presented, "Earnings, Rents, and Competition in the Airline Labor Market" at the Florida State University Economics Department Seminar Series, 1995.

Presented, "Employer Size and Labor Turnover: The Role of Pensions," at Syracuse University, 1995.

Presented, "Earnings, Rents, and Competition in the Airline Labor Market" while visiting scholar at the Federal Reserve Bank of Cleveland, 1995.

Presented, "Trends in Individual and Household Pension Coverage," at the Miami University Center for Pension and Retirement Research Conference, 1994.

Presented, "Racial Composition, Quality Sorting, and the Black-White Wage Gap" at the University of Wisconsin, Institute for Research on Poverty, Small Grants Workshop, 1993, with Barry Hirsch.

Presented, "Why Did Male Pension Coverage Decline in the 1980s?" at the Florida State University Economics Department Seminar Series, 1992.

Participant at National Bureau of Economic Research (NBER) Labor Studies meetings of the Summer Institute, 1992.

Presented, "Why Did Male Pension Coverage Decline in the 1980s?" at the Miami University Conference on Current Pension Policy Issues, 1992.

Organizer and participant at conference on "Contemporary Issues in Pension Economics," hosted by the Center for Pension and Retirement Research, Miami University, 1990.

Presented "The Effect of International Competition on Union and Nonunion Wages," at the University of Cincinnati Seminar Series, 1987.

Fiscal Note Summary

State and local governments estimate no direct costs or savings from the proposal, but operating costs could increase by an unknown annual amount that could be significant. State and local government tax revenue could change by an unknown annual amount ranging from a $1.7 million decrease to a $207 million increase depending on business decisions.

STATE AUDITORS OFFICE

The Honorable Nicole Galloway
State Auditor
State Capitol Building
Jefferson City, MO 65101

RE: Petition approval request from Richard Von Glahn regarding a proposed statutory amendment to Chapter 290, Version 13 (2018-208)

Dear Auditor Galloway:

Enclosed please find an initiative petition sample sheet for a proposal to amend the Revised Statutes of Missouri filed by Richard Von Glahn on April 3, 2017.

We are referring the enclosed petition sample sheet to you for the purposes of preparing a fiscal note and fiscal note summary as required by Section 116.332, RSMo. Section 116.175.2, RSMo requires the state auditor to forward the fiscal note and fiscal note summary to the attorney general within twenty days of receipt of the petition sample sheet.

Thank you for your immediate consideration of this request.

Sincerely,

John R. Ashcroft

Address of Notary (Street, City, State & Zip Code)

Be it enacted by the people of the state of Missouri:

Section 290.502 of the Revised Statutes of Missouri is amended and a new section to be known as section 290.529 is enacted to read as follows:

290.502. 1. Except as may be otherwise provided pursuant to sections 290.500 to 290.530, effective January 1, 2007, every employer shall pay to each employee wages at the rate of $6.50 per hour, or wages at the same rate or rates set under the provisions of federal law as the prevailing federal minimum wage applicable to those covered jobs in interstate commerce, whichever rate per hour is higher.

2. The minimum wage shall be increased or decreased on January 1, 2008, and on January 1 of successive years, by the increase or decrease in the cost of living. On September 30, 2007, and on each September 30 of each successive year, the director shall measure the increase or decrease in the cost of living by the percentage increase or decrease as of the preceding July over the level as of July of the immediately preceding year of the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) or successor index as published by the U.S. Department of Labor or its successor agency, with the amount of the minimum wage increase or decrease rounded to the nearest five cents.

3. Except as may be otherwise provided pursuant to sections 290.500 to 290.530, and notwithstanding subsection (1) of this section, effective January 1, 2019, every employer shall pay to each employee wages at the rate of not less than $8.50 per hour, or wages at the same rate or rates set under the provisions of federal law as the prevailing federal minimum wage applicable to those covered jobs in interstate commerce, whichever rate per hour is higher. Thereafter, the minimum wage established by this subsection shall be increased each year by $.70 per hour, effective January 1 of each of the next five years, until it reaches $12.00 per hour, effective January 1, 2024. Thereafter, the minimum wage established by this subsection shall be increased or decreased on January 1, 2025, and on January 1 of successive years, per the method set forth in subsection (2) of this section. If at any time the federal minimum wage rate is above or is thereafter increased above the minimum wage then in effect under this subsection, the minimum wage required by this subsection shall continue to be increased pursuant to this subsection (3), but the higher federal rate shall immediately become the minimum wage required by this subsection and shall be increased or decreased per the method set forth in subsection (2) for so long as it remains higher than the state minimum wage required and increased pursuant to this subsection.

4. For purposes of this section, the term "public employer" means an employer that is the state or a political subdivision of the state, including a department, agency, officer, bureau, division, board, commission, or instrumentality of the state, or a city, county, town, village, school district, or other political subdivision of the state. Subsection (3) of this section shall not apply to a public employer with respect to its employees. Any public employer that is subject to subsections (1) and (2) of this section shall continue to be subject to those subsections.

290.529. Except in the circumstances set forth in section 290.523, all the provisions of sections 290.500 to 290.530 are severable. If any provision, including any section, subsection, subdivision, paragraph, sentence, or clause, of sections 290.500 to 290.530, or the application thereof to any person or circumstance, is found by a court of competent jurisdiction to be invalid, unconstitutional, or unconstitutionally enacted, such decision shall not affect other provisions or applications of sections 290.500 to 290.530 that can be given effect without the invalid, unconstitutional, or unconstitutionally enacted provision or application.

MISSOURI STATE AUDITOR'S OFFICE
FISCAL NOTE (18-208)

Subject

Initiative petition from Richard Von Glahn regarding a proposed amendment to Chapter 290 of the Revised Statutes of Missouri. (Received April 4, 2017)

Date

April 24, 2017

Description

This proposal would amend Chapter 290 of the Revised Statutes of Missouri.

The amendment is to be voted on in November 2018.

Public comments and other input

The State Auditor's office requested input from the **Attorney General's office,** the **Department of Agriculture,** the **Department of Economic Development,** the **Department of Elementary and Secondary Education,** the **Department of Higher Education,** the **Department of Health and Senior Services,** the **Department of Insurance, Financial Institutions and Professional Registration,** the **Department of Mental Health,** the **Department of Natural Resources,** the **Department of Corrections,** the **Department of Labor and Industrial Relations,** the **Department of Revenue,** the **Department of Public Safety,** the **Department of Social Services,** the **Governor's office,** the **Missouri House of Representatives,** the **Department of Conservation,** the **Department of Transportation,** the **Office of Administration,** the **Office of State Courts Administrator,** the **Missouri Senate,** the **Secretary of State's office,** the **Office of the State Public Defender,** the **State Treasurer's office, Adair County, Boone County, Callaway County, Cass County, Clay County, Cole County, Greene County, Jackson County, Jasper County, St. Charles County, St. Louis County, Taney County,** the **City of Cape Girardeau,** the **City of Columbia,** the **City of Jefferson,** the **City of Joplin,** the **City of Kansas City,** the **City of Kirksville,** the **City of Mexico,** the **City of Raymore,** the **City of St. Joseph,** the **City of St. Louis,** the **City of Springfield,** the **City of Union,** the **City of Wentzville,** the **City of West Plains, Cape Girardeau 63 School District, Hannibal 60 School District, State Technical College of Missouri, Metropolitan Community College, University of Missouri, St. Louis Community College, University of Central Missouri, Harris-Stowe State University, Lincoln University, Missouri State University, Missouri Southern State University, Missouri Western State University, Northwest Missouri State University, Southeast Missouri State University, Truman State University, Kansas City Board of Police Commissioners, The Metropolitan Police Department - City of St. Louis,** the **St. Louis County Board of Elections,** the **Board of Election**

Commissioners City of St. Louis, the **Kansas City Board of Election Commissioners,** the **Platte County Board of Elections,** the **Jackson County Election Board,** and the **Clay County Board of Election Commissioners**.

Lara Granich and **Missouri Jobs with Justice Voter Action** provided information as proponents of the proposal to the State Auditor's office.

Robert Bonney, Chief Executive Officer of the Missouri Restaurant Association provided information as an opponent of the proposal to the State Auditor's office.

Assumptions

Officials from the **Attorney General's office** indicated they expect that, to the extent that the enactment of this proposal would result in increased litigation, they can absorb the costs associated with that increased litigation using existing resources. However, if the enactment of this proposal were to result in substantial additional litigation, they may request additional appropriations. They do not expect that the enactment of this proposal would result in any other increased costs to their office.

Officials from the **Department of Agriculture** indicated there is no fiscal impact to their department for this initiative petition.

Officials from the **Department of Economic Development** indicated no impact to their department.

Officials from the **Department of Higher Education** indicated this initiative petition would not have a fiscal impact on their department since public employers are exempt from the new provisions proposed.

Officials from the **Department of Health and Senior Services** indicated this proposal would have no direct fiscal impact on their department since government employees are exempt from its provisions. However, employees of certain entities that receive funding through the department's budget would be impacted, such as Medicaid Home and Community Based Services vendors/providers and Area Agencies on Aging.

Officials from the **Department of Insurance, Financial Institutions and Professional Registration** indicated this petition, if passed, will have no cost or savings to their department.

Officials from the **Department of Mental Health** indicated this proposal creates no direct obligations or requirements to their department that would result in a fiscal impact.

Officials from the **Department of Natural Resources** indicated their department defers to the Office of Administration to determine the fiscal impact of this proposal.

Officials from the **Department of Corrections** indicated they defer to the Office of Administration.

Officials from the **Department of Labor and Industrial Relations** indicated no fiscal impact on their department.

Officials from the **Department of Revenue** indicated this petition will have no fiscal impact on their department. Their department defers to the Office of Administration for a state impact.

Officials from the **Department of Public Safety - Office of the Director** indicated they will defer to the response provided for this initiative petition by the Office of Administration - Human Resources.

Officials from the **Department of Social Services** indicated no fiscal impact on their department. They defer to the Office of Administration.

Officials from the **Governor's office** indicated there should be no added cost or savings to their office.

Officials from the **Missouri House of Representatives** indicated no fiscal impact to their office.

Officials from the **Department of Conservation** indicated that no adverse fiscal impact to their department would be expected as a result of this proposal.

Officials from the **Department of Transportation** indicated unknown fiscal impact.

Officials from the **Office of Administration** indicated the proposal amends Sections 290.502 and adds Section 290.529, RSMo.

Section 290.502, RSMo, increases the minimum wage to $8.50 per hour, beginning January 1, 2019 and by another $0.70 per hour each year until it reaches $12.00 per hour beginning January 1, 2024. Thereafter, the minimum wage will be adjusted annually based on the increase/decrease in the cost of living.

The proposal exempts public employers from the requirements; therefore, there would be no cost to the State of Missouri.

Because no tax rates are affected, there is no direct impact on general and total state revenues. However, these proposals may have several indirect affects, which could impact revenue collections by an unknown amount, including but not limited to:

- Increased wages for certain employees. According to the US BLS, in 2015, Missouri had 57,000 hourly employees earning wages at or below the federal minimum wage;[1]
- Increased consumption by those employees;
- Lower overall employment (if employers choose to hold costs steady);

[1] http://www.bls.gov/opub/reports/minimum-wage/2015/home.htm

- Lower business investment (if employers' payrolls increase);
- Increased prices as firms pass–through labor costs.

This proposal should not impact their office.

Officials from the **Office of State Courts Administrator** indicated there is no fiscal impact on the courts.

Officials from the **Missouri Senate** indicated no fiscal impact on their office.

Officials from the **Secretary of State's office** indicated their office is required to pay for publishing in local newspapers the full text of each statewide ballot measure as directed by Article XII, Section 2(b) of the Missouri Constitution and Section 116.230-116.290, RSMo. Their office is provided with core funding to handle a certain amount of normal activity resulting from each year's legislative session. Funding for this item is adjusted each year depending upon the election cycle with $1.3 million historically appropriated in odd numbered fiscal years and $100,000 appropriated in even numbered fiscal years to meet these requirements. Through FY (fiscal year) 2013, the appropriation had historically been an estimated appropriation because the final cost is dependent upon the number of ballot measures approved by the General Assembly and the initiative petitions certified for the ballot. In FY 2015, the General Assembly changed the appropriation so that it was no longer an estimated appropriation. In FY 2017 their office was appropriated $2.6 million to publish the full text of the measures. In FY 2017, at the August and November elections, there were 6 statewide Constitutional Amendments or ballot propositions that cost $2.4 million to publish (an average of $400,000 per issue). Their office will continue to assume, for the purposes of this fiscal note, that it should have the full appropriation authority it needs to meet the publishing requirements. Because these requirements are mandatory, they reserve the right to request funding to meet the cost of their publishing requirements if the Governor and the General Assembly again change the amount or continue to not designate it as an estimated appropriation.

Officials from the **Office of the State Public Defender** indicated this initiative petition will not have any significant impact on their office.

Officials from the **State Treasurer's office** indicated they do not predict an immediate fiscal impact upon their office if Missouri's minimum wage rate were increased to $12.00 per hour. However, the potential future impact of applying cost of living increases and/or increases in the federal minimum wage to a Missouri minimum wage of $12.00 per hour, as called for elsewhere in Section 290.502, RSMo., is unknown.

Officials from **Greene County** indicated there are no estimated costs or savings to report from their county for this initiative petition.

Officials from the **City of Kansas City** indicated this petition may have a small negative fiscal impact on their city as a result of the increased hourly minimum wage being higher than the hourly rate paid some city employees.

Officials from the **City of Raymore** indicated no fiscal impact.

Officials from **University of Missouri** indicated they are not able to estimate any significant financial impact on their university.

Officials from **University of Central Missouri** indicated they estimate no fiscal impact since they are excluded under the public employer definition in section 4.

Officials from the **Missouri State University** indicated no fiscal impact.

Officials from **Missouri Southern State University** indicated they do not anticipate any fiscal impact from this initiative petition.

Officials from **Missouri Western State University** indicated the wording is unclear as to whether Colleges/Universities are included in this petition. In assuming they are included, they calculate the following significant fiscal impact to their university. The proposal will have a severe negative impact on the university. Payroll expenses will increase in 2019 approximately $275,800.00 and increase annually with an overall projected increase in 2024 of $1,635,000.00. The projections are based on a starting minimum wage of $8.50 per hour in 2019, increasing .70 an hour annually until 2024 when the proposed fiscal note would reach $12.00 an hour.

Officials from the **Kansas City Board of Election Commissioners** indicated no fiscal effect on their operations.

Officials from the **Platte County Board of Elections** indicated no fiscal impact.

Officials from the **Jackson County Election Board** indicated this petition does not have a fiscal impact on their office.

Lara Granich and **Missouri Jobs with Justice Voter Action** provided the following information as proponents of this initiative petition.

Version 33	2018 - 199	$13 by 2023 (Start at $9; $1/year)	Yes	Yes	60%	Yes

This letter is from Lara Granich and Missouri Jobs with Justice Voter Action, proponents of the above-referenced Minimum Wage Initiative Petitions. Pursuant to RSMo. Section 116.175, we write to submit the following fiscal impact information to assist your office in its analysis of the fiscal impact of the above-mentioned seven proposed Minimum Wage Initiative Petitions.

Our analysis estimates the impact of the proposed Minimum Wage Initiative Petitions on state and local sales and personal income tax revenue in Missouri. We follow the process that has been used in the past to estimate the impact of minimum initiative petitions on state and local sales and personal income tax revenue, with some refinements. We also address certain claims that have been made by opponents of similar initiative petitions in the past.

As these petitions exclude public workers from the proposed minimum wage increases, we do not include in our analysis an estimate of the impact on state and local payroll costs of the proposed Minimum Wage Initiative Petitions.

I. Estimate of Number of Workers Affected Statewide and the Impact on Their Wages

Table 1. Summary of the Number of Affected Workers and Aggregate Wage Increases for Missouri in the Final Year of Minimum Wage Implementation.

Proposal	Year of Peak Minimum Wage (MW)	Proposed Peak MW	Tipped MW in Peak MW Year	Workers Affected by MW increase	Aggregate Annual Wage Increase in Nominal Dollars
13,14,15[a]	2023	$ 12.00	$ 6.00	835,350	$4,358,798,129
16,17,18[a]	2024	$ 12.00	$ 6.00	819,652	$4,209,438,048
19,20,21[a]	2025	$ 13.00	$ 6.50	900,788	$5,309,336,662
22,23,24[a]	2022	$ 11.00	$ 5.50	738,515	$3,347,138,756
25	2021	$ 11.00	$ 5.50	761,164	$3,469,534,559
26	2022	$ 12.00	$ 6.00	852,284	$4,510,285,824
27	2023	$ 13.00	$ 6.50	949,801	$5,667,065,534
28	2024	$ 12.00	$ 9.60	832,328	$4,288,614,460
29	2025	$ 13.00	$ 7.80	905,942	$5,332,471,496
30	2022	$ 12.00	$ 8.40	864,090	$4,558,317,729
31	2022	$ 12.00	$ 6.84	855,887	$4,523,341,931

32	2023	$ 13.00	$ 9.75	948,421	$5,745,051,956
33	2023	$ 13.00	$ 7.54	942,566	$5,685,951,766

Notes: Author's Analysis of American Community Survey (ACS) Data from 2014.
(a) Since these proposals only vary on non-economic factors, their economic and fiscal impacts are treated as equal for the purposes of this report.

Across the proposals analyzed, the total aggregate wage increase for workers in Missouri ranges from a low of $3.347 billion (Proposals 22-24) to a high of $5.745 billion under Proposal 32. While some proposals have the same final impact numbers, they have different impacts in the initial years (not listed) based on the relative pace of increases in earlier years. A full, year-by-year impact analysis is presented in Appendix Tables A1 through A13 below.

The wage impact of an increase in the minimum wage for the state of Missouri is calculated using the following procedure. The American Community Survey (ACS) Public Use Micro Sample for the most recent year available (2014) for the state of Missouri was downloaded from the US Census Bureau. The American Community Survey was chosen over the Current Population survey because the ACS has a significantly larger sample. We followed the method of Perry, Thomason, and Bernhardt (2016) for calculating an hourly wage rate from the ACS based on observed total annual wage income, typical hours worked each week and weeks worked per year. Since ACS income figures are clustered around whole-numbers, we smoothed the wage distribution by randomly adding or subtracting $0.25 from each wage figure.

Wage adjustments were made only for those individuals earning less than the proposed minimum wage, or proposed tipped minimum wage. We did not make additional adjustments for the "ripple effect" of minimum wage increases on workers earning slightly above the new threshold. Recent evidence suggests that workers earning up to 15 percent above of the minimum wage also receive small increases in response to a minimum wage increase. (See Wicks-Lim (2006) and Dube, Giuliano and Leonard (2015).) Thus, the estimated impacts listed above are likely to be smaller than the actual impact of increasing the minimum wage to the proposed level.

The proposed minimum wage increases exclude public employees. However, it was not practicable to exclude public employees from these calculations because the ACS does not have a published variable that allows for identification of public employees. Nonetheless, this inclusion of public employees should have only a minimal impact on our results, since their numbers are small and most already earn more than the proposed minimum wage increases.[1]

All wages from the 2014 survey were adjusted upward to account for inflation between the time of the survey and the time of measurement of the impact. Actual rates of inflation were used to adjust wages up to 2016. For all subsequent years between 2017 and 2028, baseline wages were adjusted using the projected annual average rate of change in the Consumer Price Index for Urban Workers (CPI-U) for the Midwest region. The 2015 and 2016 Missouri Minimum wage of $7.65 was adjusted by the same factor prior to measuring the impact of a change to the proposed minimum wage in 2019.

After these adjustments, the resulting hourly wage of all employees was compared to the proposed minimum wage. A total of twenty-one proposals were analyzed. For each proposal, we constructed a baseline wage scenario that used only basic wage changes from expected inflation rates to predict each ACS respondent's hourly wage rate in each year

[1] For Missouri's state employees, this can be validated by viewing the earnings of all state employees at: http://mapyourtaxes.mo.gov/MAP/Employees/. In larger counties and cities most all public employees already earn more than the highest proposed minimum wage. Smaller counties and towns may have some public employees who earn less than the highest proposed minimum.

between 2019 and 2028. We then constructed a counterfactual, or "proposed" wage distribution for each worker under all twenty-one minimum wage proposed scenarios. Since the minimum wage proposals offer nine different paths for raising the minimum wage for all non-tipped private sector workers, and different wage paths for tipped workers, we create separate minimum wage changes for tipped and non-tipped workers. Specifically, we used information on a worker's occupation and observed wage levels to separately identify tipped workers and assign them the proposed tipped minimum wage in each year, rather than the higher non-tipped minimum wage.[2]

If the proposed minimum wage was less than the inflation-adjusted hourly earnings of an employee, then no impact was calculated. If the proposed minimum wage was more than the hourly earnings for an employee, then the difference between the inflation-adjusted hourly earnings (i.e. baseline) and the proposed minimum wage was calculated. That difference was multiplied by the number of hours the employee worked in the year to calculate the annual impact for that employee. The result was then multiplied by a weighing factor for that employee in the population. The total impact for the state of Missouri was then summed across all affected workers to generate a total estimated increase in wage income in the state.

We do not include an estimate of job losses due to minimum wage changes. Existing research is clear that past minimum wage increases have had no measurable effect on aggregate employment levels. Larger minimum wage increases, such as those in Los Angeles, Seattle, and other jurisdictions, have not yet been studied to detect a clear disemployment effect. While it is possible that there may be some employment losses due to automation or other factors, this potential negative effect is likely offset by the positive potential job growth stemming from multiplier effects of the spending of minimum wage workers who receive substantial raises. There is substantial research to indicate that increases in the minimum wage have multiplier effects that increase the direct effects. For this reason and because of the likely increases in wages for individuals who earn above the proposed minimum wage rates, the impacts summarized in the table are considered conservative estimates relative to the total impact that would occur as a result of increasing the minimum wage to the proposed levels.

II. Economic Literature on the Impact of Minimum Wage Increases on Employment

Next, it is necessary to review the economic literature on the impact of minimum wage increases on employment. Opponents often claim that minimum wage increases may reduce employment in a state. If that is true, then those employment reductions would result in reductions in state income and sales tax revenue. However, review of the most credible recent empirical research on the minimum wage shows that increases in the minimum wage have had no discernible impact on employment. We thus conclude that it is not appropriate to project that the proposed initiative petitions would result in any detectable employment reduction, and resulting losses in income and sales tax revenue, or increases in unemployment-related costs to the state.

Economists have conducted hundreds of studies of the employment impact of the minimum wage. A recent meta-study – a formal statistical study of studies – by Doucouliagos and Stanley (2009) reviewed all the research conducted over the last three decades on the employment impact of minimum wage increases on teenagers in the United States. The researchers concluded that the minimum wage has little or no discernible effect on the employment prospects of low-wage workers. Their study followed a rigorous, peer-reviewed procedure and has the advantage of using a set of predetermined, objective criteria for weighing the validity of statistical findings across studies with different results.

[2] We defined tipped workers as those employed in occupations that typically receive a large share of income as tips. These occupations were 'Bartenders' (4040), 'Waiters and Waitresses', 'Food Servers, Non-restaurant' and 'Miscellaneous food preparation and serving related workers including dining room and cafeteria attendants and bartender helpers'.

(Source: Doucouliagos, Hristos and T. D. Stanley. 2009. "Publication Selection Bias in Minimum-Wage Research? A Meta-Regression Analysis." British Journal of Industrial Relations,vol. 47, no. 2, pp. 406-428.)

Recent theoretical and empirical research emphasizes several explanations for the consistently negligible employment impacts of moderate increases in the minimum wage. First, relative to total wage costs, minimum-wage increases are small. Second, employers and workers appear to respond to minimum-wage increases in many ways that reduce the direct cost to employers and substantially reduce or eliminate the need to cut employment.

Probably the most important economic response to a higher minimum wage is a reduction in turnover. At higher wages, employers fill vacancies faster and retain employees longer, boosting total employment and average productivity per worker while reducing direct and indirect training costs. Dube, Lester, and Reich (2012), for example, examined the effect of the minimum wage on labor turnover among teens and restaurant workers. They find "...striking evidence that separations, new hires, and turnover rates for teens and restaurant workers fall substantially following a minimum wage increase..." (p. 2). Their findings, using nationally representative data, are consistent with local case studies of the minimum wage and related "living wage" laws, including Dube, Naidu, and Reich's (2007) analysis of the San Francisco city-wide minimum wage; Fairris's (2005) study of local government contractors in Los Angeles; Howes (2005) on homecare workers in California; and Reich, Hall, and Jacobs (2005) on workers at the San Francisco airport.

"Living Wage Policies at the San Francisco Airport: Impacts on Workers and Businesses." *Industrial Relations*, vol. 44, no. 1, pp. 106-138.)

Employers also appear to respond to increases in the minimum wage by taking measures to boost productivity. Hirsch, Kaufman, and Zelenska's (2011) study of the impact of the federal minimum wage increase on 81 fast-food restaurants in Georgia and Alabama, for example, asked fast-food managers about the scope for efficiency improvements in response to the minimum-wage rise. About 90 percent of managers indicated that they planned to respond to the minimum wage increase with increased performance standards such as "requiring a better attendance and on-time record, faster and more proficient performance of job duties, taking on additional tasks, and faster termination of poor performers." (p. 27) Roughly the same share of managers said that they sought to "boost morale" by presenting the minimum wage increase as a "challenge to the store" and using this as a way "to energize employees to improve productivity." (pp. 28-29) Based on their interviews with store managers, the researchers concluded that a minimum wage increase may function as a "catalyst or shock that forces managers to step out of the daily routine and think about where cost savings can occur." (p. 29) (Source: Hirsch, Barry T., Bruce Kaufman, and Tetyana Zelenska, "Minimum Wage Channels of Adjustment." IZA Discussion Paper No. 6132. Germany: Institute for the Study of Labor. http://www2.gsu.edu/~ecobth/IZA_HKZ_MinWageCoA_dp6132.pdf)

A higher minimum wage may also motivate workers to work harder, independently of any actions by employers to increase productivity. According to "efficiency wage" theory, wages above the competitive-market rate may elicit greater work effort for several reasons. As Carl Shapiro and Joseph Stiglitz (1984) have argued, higher pay increases the cost to workers of losing their job, potentially inducing greater effort from workers in order to reduce their chances of

being fired. George Akerlof (1982), arguing from a more sociological point of view, has suggested that workers may see higher wages as a gift from employers, leading workers to reciprocate by working harder. (Sources: Shapiro, Carl and Joseph E. Stiglitz. 1984. "Equilibrium unemployment as a worker discipline device." *American Economic Review*, vol. 74, no. 3, pp. 433-444; Akerlof, George A. 1982. "Labor contracts as partial gift exchange." *Quarterly Journal of Economics*, vol. 97, no. 4, pp. 543-569.)

We therefore conclude that the proposed increase in the Missouri minimum wage would have no discernible impact on the employment levels of low-wage workers. Accordingly, we do not factor in reductions in employment, or any resulting decrease in sales tax or income tax. We also do not project any increased unemployment insurance costs – both because we do not project any resulting job losses, and, additionally, because unemployment insurance costs are paid for by employer premiums, and so are ultimately not a cost to the state.

For similar reasons, we do not believe that the proposed increase will have any significant adverse economic impact on small businesses or, by extension, on corporate income tax revenue. In fact, many small businesses already pay little if any corporate income tax.

III. State and Local Sales and Personal Income Tax Revenue Impact of Raising the Minimum Wage

Based on the wage impact figures calculated above, and the understanding that the minimum wage increases would be unlikely to result in offsetting job losses, we next calculate the impact of the projected wage increases on state and local sales and personal income tax revenue in Missouri. We project only the direct impact of the various minimum wage increase scenarios on such tax revenue. We do not attempt to project the additional impact through a GDP multiplier effect, or the potentially higher sales taxes generated if employers offset wage increases with higher prices (which would be taxable).

Personal Income Tax Revenue. In order to determine the projected increase in personal income tax revenues that would result directly from the increased wages, we had to develop assumptions about the effective income tax rates of the affected workers. We made the following assumptions with respect to the effective tax rate:

1. That 25% of affected workers can be claimed as a dependent on another party's Missouri income tax return and, as a result, would pay an effective tax rate of 6.0% on the increase in income;
2. That 50% of the affected workers would file as single taxpayers, would claim one deduction of $2,100, and would be entitled to a standard deduction of $5,800. This would result in an effective tax rate of 2.47%;
3. The remaining 25% would, we assumed, pay no additional Missouri income tax.

In light of these assumptions, the increased Missouri income tax revenue for each petition version can be calculated as follows: (total wage increase * 25% * 6.0%) + (total wage increase * 50% * 2.47%) + (total wage increase *25% * 0%).

Sales Tax Revenue. The state of Missouri imposes a 4.225% state sales tax on those items that are not exempt from the sales tax base. In addition, the average local sales tax rate is 2.95%. As a result, the average Missouri net sales tax rate is 7.175%. To estimate the share of income that is spent on goods and services that are subject to sales taxes, we used data from the 2015 Consumer Expenditure Survey (CES) for the US to estimate the share of income spent on categories that are subject to sales taxes. The CES summary tables list average spending per consumer across 20 different

categories (e.g. housing, transportation, food away from home) and we categorized each spending item as taxable or non-taxable and then calculated the share of spending that we taxable.[3] The resulting rate was 30.3 percent.

Based upon the above assumptions, and the total wage increase calculations for each version of the petition, we estimate that the increase in state income tax revenue resulting from the increased wages would be as follows:

Table 2. Summary of the Impact of Minimum Wage Increases on State and Local Sales and Income Taxes in Year of Full Minimum Wage Final Implementation.

Proposal	State Sales Tax (4.225%)	Local Sales Tax Revenue (2.95%)	Total Sales Tax Revenue Increase	Personal Income Tax Revenue	Total Sales and Personal Income Tax Revenue Increase
13,14,15[a]	$55,814,587	$38,971,132	$94,785,719	$119,213,129	$213,998,848

Note: Author's Analysis of American Community Survey (ACS) data from 2014 and fiscal impact assumptions described above. All dollars are in nominal figures. (a) Since these proposals only vary on non-economic factors, their economic and fiscal impacts are treated as equal for the purposes of this report.

As described in Table 2 above, the fiscal impact of the proposed minimum wage increases varies based on the ultimate level of the minimum wage and the degree of tipped minimum wage phase out. The estimates of the total fiscal benefit range from $164 million to $282 million annually. Appendix tables A1 through A13 provide a year-by-year summary of the fiscal benefits.

[3] Specifically, the categories we assumed to be subject to state and local sales taxes are: food, household furnishings and equipment, vehicle purchases, gasoline and motor oil, entertainment, and all other expenditures. We assumed that 50 percent of the spending on the category "apparel and services" was taxable.

We hope that this information is useful to your office as your prepare your analyses of the petitions.

Respectfully submitted,

Lara Granich

Robert Bonney, Chief Executive Officer of the Missouri Restaurant Association provided the following information as an opponent of this initiative petition.

These corrections were subsequently provided to the submitted information

In the table on the bottom of page 7 and top of page 8, both averages for 2023 should be based on a 5 year phase-in. Accordingly, the figure on that table should state for 2023 ($12) Average Annual Unemployment Premiums Paid by State of $16,269,523.52.

The corresponding change on the table on page 12 would be to state, for 2023 ($12) Total Net Loss to State Government from Taxes and Unemployment Insurance of ($19,137,851.76).

Re: Initiative Petitions 2018-196 through 2018-216

Dear Mr. Halwes,

I write on behalf of Robert Bonney. Mr. Bonney is the Chief Executive Officer of the Missouri Restaurant Association. Please consider this letter and the accompanying studies as his fiscal impact statement as an opponent of Initiative Petitions 2018-196 through 2018-216 (the "Initiative Petitions"). If passed, any of these twenty-one initiatives would have a substantial negative impact on state and local governments, as well as Missouri small businesses. Those effects are both direct (as noted in Section 1) and secondary (as noted in Sections 2 through 5). The direct effects stem from higher labor and contracting costs that the state and its political subdivisions will incur, despite the Initiatives' effort to exclude government workers from the mandate.

The indirect effects will present a debate this Office has seen before. The proponents of the Initiative Petitions will once again rely on data sourced from political activist groups who claim increases in the minimum wage only serve to create new taxable income. The reality is that such groups approach this issue with political bias. Their analysis is one-sided because it completely ignores the fact that a wage increase does not "create" income from thin air; instead, it is an economic transfer from Missouri businesses to workers. Missouri businesses must pay the new wages "created" by the increases. Political activists' models fail to account, then, for two specific manifestations of the "debit" side of this transfer: reductions in employment, and the reduction in corporate income tax paid based upon business done in Missouri.

The failure to account for any employment effect at any proposed wage increase—even a drastic increase of the minimum wage to $13—is particularly puzzling, because Missouri's most populous areas border Illinois and Kansas. These states, respectively, have minimum wages of $8.25 and $7.25. Neither state adjusts the minimum wage for inflation. Likewise, the second effect—loss of corporate income tax revenues—is a mathematical certainty. Missouri businesses will be the source of the wage increase, which will lower their own taxable income. Assuming a one-to-one substitution of "created" wages for lost corporate income, the difference in the rates

at which these two types of income are taxed will result in a net decrease in state revenue. A dollar from increased wages is taxable by state government in Missouri at 6% or substantially less, whereas Missouri's corporate income tax rate is 6.25%.

On top of these two types of negative outcomes—lower employment and lower state tax revenues—there may be second-order effects to small businesses because they lack the access to capital to weather price fluctuations; they may not survive at all because they may not have the flexibility to simply cut employment, shifting their reliance to capital instead of labor resources, or suffering a decrease in production and revenue.

In short, much of the fiscal impact regarding the current crop of wage-related ballot measures is secondary: they cause transfers of wealth within (or out of) the state economy, and those transfers of wealth then create second-order effects for state and local governments via their collection of tax revenues and provision of welfare services for the unemployed or less-employed. Because these fiscal notes call for the Auditor operate in the area of secondary effects, it is critical that she treat both sides of the wealth transfer equally, and refrain from assessing only one half of the wage increase equation.

1. Direct Labor Cost Impact on State and Local Government Budgets

As noted to the State Auditor's Office previously by Dr. David Macpherson, a nationally prominent labor and economics expert, there are two ways to measure labor cost on state and local government budgets. First, one can use the information included in fiscal note responses from state and local government entities. It is important to note that these fiscal notes provide an incomplete and, therefore, too-low estimate of labor cost. Few state and local government entities respond to requests for a fiscal note response, and those that do respond often ignore important effects.

Second, data from the U.S. Census Bureau's Current Population Survey (CPS) can be used to calculate increased labor cost to state and local government entities in Missouri. To combat this time-honored analysis, and in a blatant attempt to manipulate the fiscal note process, the Initiative Petitions provide that they will raise the minimum wage for private workers, but not for workers employed by state or local governmental entities. No conceivable justification exists for solely raising the minimum wage on private businesses. Whatever the disparity between the value of total compensation at a private business and at a government employer, that disparity does not approach the wage adjustments at issue here, ranging from an inflation adjusted wage increase of 51.16% (($13-$8.60)/$8.60) in Initiative Petitions 2018-198 through 2018-201 to a wage increase of 30.17% (($11-$8.45)/$8.45) in Initiative Petitions 2018-213 through 2018-215.

Moreover, it is unreasonable to assume that on a sustained basis public employers, as defined in the Initiative Petitions, would be able to maintain dramatically lower wage levels than private businesses. Public employers would lose staff employable at higher rates in the private market, imposing substantial costs on government productivity. Using the method traditionally employed by labor economists and followed by the Auditor's office, one can calculate the annual

wage costs to state and local governmental entities, based on the annual wage cost for each state and local government worker in the ORG CPS, as detailed on page 6 of Dr. Macpherson's 2012 report, attached hereto as **Exhibit A**. Even if the auditor finds that a specific estimate of costs is not determinable, the auditor should note that state and local government "operating costs could increase by an unknown annual amount that could be significant," through the form of higher wage costs and higher contracting costs.

The proponents of the Initiative Petitions may argue that the Auditor should abandon any state and local cost estimates altogether. The proponents will argue that provisions they have inserted in the statute would mean that state and local government entities will not have to pay higher wages to their employees. Setting aside unjustifiable discrimination against private employers (and "public employees"), the provision is of uncertain legal effect and constitutionality. A "public employer," defined in the initiatives as "the state or a political subdivision of the state" still incurs substantial costs for wages of individuals that are "private employees," rather than "public employees." Cleaning services, food service, and other essential services often rely on state contracts with outside vendors. Sometimes, a contract rate may vary depending on the cost of labor. Even if the contract rate is fixed, it must be re-bid periodically, and that bidding process would take into account the new minimum wage. Plainly, the initiative would impose higher costs for state and local governments in contracting with any private entity and its employees. As a matter of law, it would be insufficient and unfair for the Auditor's fiscal note or summary to simply assume that these costs to state and local governmental entities do not exist.

2. Cost of Unemployment Benefits

a) The effect of inflation on Missouri's minimum wage

CPS–ORG data show that between 2007 and 2015, median nominal wages for adult (25–59 years old) workers in the U.S. grew by 1.68 percent a year. However, Missouri's minimum wage is currently adjusted using "the percentage increase or decrease as of the preceding July over the level as of July of the immediately preceding year of the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W)." Section 290.502, RSMo. Coincidentally (or perhaps not), the CPI-W, over the period from 2006 to 2016, also increased at an average rate of 1.68 percent a year.

Year	CPI-W	Observed inflation %
2006	199.2	
2007	203.7	0.022590361
2008	216.304	0.061875307
2009	210.526	-0.0267124

2010	213.898	0.016017024
2011	222.686	0.041085003
2012	225.568	0.01294199
2013	230.084	0.02002057
2014	234.525	0.019301646
2015	233.806	-0.00306577
2016	234.771	0.004127353

Using Missouri's current inflation-adjusted minimum wage rate and an assumed, constant 1.68 percent increase in the CPI-W, the minimum wage in Missouri will be as follows:

Year	Estimated Minimum Wage
2016	$7.65 (observed)
2017	$7.70 (observed)
2018	$7.85
2019	$8.00
2020	$8.15
2021	$8.30
2022	$8.45
2023	$8.60
2024	$8.75
2025	$8.90
2026	$9.05

b) Calculating job loss attributable to increased minimum wage

At least one outside economist, James Sherk, has already provided an estimate for job loss in Missouri based on a $15 minimum wage. Mr. Sherk calculated the effect of a $15 minimum wage implemented in 2021. Mr. Sherk's figures accounted for inflation by estimating the present value of $15.00 in 2021, rather than estimating an absolute figure for wage inflation in Missouri. Mr. Sherk calculated the present value of $15.00 in 2021 to be $13.57, per hour, based on wage inflation of 1.68 percent. Mr. Sherk evaluated the change from $7.65 per hour to $13.57 per hour (a 77.39% increase), exclusive of agricultural workers. Cumulatively, Mr. Sherk calculated this 77.39 percent increase in wages to reduce employment in the affected workforce by (0.7739*0.677) 52.39%.

Graves Garrett LLC

Mr. Sherk calculated that approximately 40.9% of Missouri's Wage and Salary Workers would be affected by such a $15 minimum wage. Mr. Sherk's calculations reveal that a $15 minimum wage in 2021 would be expected to reduce the number of full-time equivalent jobs in Missouri by approximately 218,000. Based on CPS–ORG data, these figures reveal an affected workforce of approximately 416,086 workers impacted by a $15 minimum wage increase in 2021.

However, in 2014, Dr. Macpherson found, using more conservative, national-level Congressional Budget Office data, that an increase to a $10.10 minimum wage, effective January 1, 2015, would eliminate about 15,700 jobs in Missouri. Dr. Macpherson analyzed the effect of a Missouri $10.10 minimum wage using a model suitable to a national analysis. This analysis predicted a loss of 15,700 Missouri jobs based on a wage increase from $7.50 in 2014 to $10.10 in 2015 (a 34.67% increase).

On the whole, the analysis by Mr. Sherk is more instructive here, since it is more recent, Missouri-specific, and anticipates larger wage changes contemplated by the Initiative Petitions. The most accurate way to determine the estimate of Workers Affected would be to analyze the CPS–ORG data. However, without such data readily available in the time constraints imposed by the fiscal note process, it is reasonable for estimation purposes to assume Mr. Sherk's figures are evenly distributed. Assuming that worker data follows an equal distribution, the Initiative Petitions would be expected to result in the following job losses:

Year of final prescribed wage increase	Wage without IP	Wage mandated by IP	Percentage increase	Percentage of affected workers who lose jobs (Percentage Increase x 0.677 Elasticity)	Estimate of Workers Affected	Estimate of Missouri Workers Unemployed by Initiative
2021	$8.30	$11.00	32.53%	22.02%	174,897	38,512
2022	$8.45	$11.00	30.18%	20.43%	162,262	33,150
2022	$8.45	$12.00	42.01%	28.44%	225,866	64,236
2023	$8.60	$12.00	39.53%	26.77%	212,532	56,895
2023	$8.60	$13.00	51.16%	34.64%	275,061	95,281
2024	$8.75	$12.00	37.14%	25.15%	199,683	50,220
2024	$8.75	$13.00	48.57%	32.88%	261,136	85,861
2025	$8.90	$13.00	46.07%	31.19%	247,695	77,256
2026	$9.05	$13.00	43.65%	29.55%	234,683	69,349

c) The best estimate for a price elasticity of demand for low-skilled labor is -0.677.

As noted by Mr. Sherk, starting wages of $15.00 per hour mean that full-time employee must create at least $38,700 a year in value for his or her employer (including wages, employer payroll taxes, and mandatory healthcare benefits). High minimum wages and mandatory benefit costs make it much harder for less-experienced and less-skilled workers to find jobs, particularly full-time work.

Recent labor economics scholarship has revealed that, accounting for publication bias, a state-specific elasticity of demand for less-skilled workers is, on average, approximately -0.677, though some estimates are even higher, around -1.0.[1] "[E]conomists have extensively studied how businesses respond to higher wages overall, not just minimum-wage increases. On average these studies find a 10 percent increase in labor costs causes firms to reduce employment of less-skilled workers by 6.8 percent in the long run."[2]

While these elasticity estimates are substantial in absolute terms, there is reason to believe that such estimates might still understate the impact of a Missouri state-specific effort to increase the minimum wage. This is so for several reasons. First, traditionally, labor economists view labor as a reasonably difficult input to substitute; however, Missouri businesses have readily available options. There are relatively few barriers to doing business in Missouri's border states, and businesses can easily relocate across a state line to take advantage of more favorable wage (and tax laws). Additionally, substantially raising the cost for Missouri labor, relative to labor sources in other states and other countries, is likely to force many manufacturing jobs in Missouri to disappear entirely. Automation is also a significant risk. The substitution of labor is becoming increasingly easy due to technology advancements and the "sharing" economy, where fewer individuals are "employees" covered by the minimum wage. Finally, a labor "price shock" may result in significant decreases in the demand for goods and services. People make behavioral changes to avoid higher costs, including eating out less often and generally decreasing consumption (or shifting their activities to consumption involving comparatively low amounts of labor) wherever possible.

[1] Sherk, James, "How $15-per-Hour Minimum Starting Wages Would Affect Each State," The Heritage Foundation, http://report.heritage.org/ib4601.

[2] "The coefficients on these estimates imply an elasticity of –0.677 for a study published in 2012 (the most recent year in their data) of long-run unconditional labor demand for low-skilled labor in the U.S., estimated using industry-level administrative panel data and a structural form model." "Estimates that do not account for publication bias tend to slow a long-run elasticity closer to –1.0. See, for example, George Borjas, Labor Economics, 6th ed. (Columbus, OH: McGraw-Hill, 2013), Chapter 4: 'The evidence also suggests that the estimates of the long-run labor demand elasticity cluster around –1, so the long-run labor demand curve is indeed more elastic than the short-run curve.' " Sherk, available at http://report.heritage.org/ib4601.

Graves Garrett LLC

d) Unemployment Benefit Costs

We derived an average unemployment payout by calculating the expected weekly unemployment benefit amount. Based on current data, the expected unemployment weekly benefit amount of a worker making $7.65 an hour, on a 40 hour workweek, is $159.12 per week, for 20 weeks.[3] The expected unemployment weekly benefit amount of a worker making $10.99 an hour is $228.59 per week. The expected unemployment weekly benefit amount of a worker making $11.99 an hour is $249.39 per week. The expected unemployment weekly benefit amount of a worker making $12.99 an hour is $270.19 per week. We assume that workers will seek unemployment insurance for the full twenty weeks authorized under Missouri law, because unemployment attributable to an increase in the minimum wage is structural. In this case, structural unemployment occurs because workers' job skills do not meet the established "price floor" of labor, rendering the worker's skills unmarketable. Assuming an even distribution of workers affected, the average unemployment benefit cost to the state for a worker is calculated as follows:

- For Initiative Petitions 2018-213 through 2018-216, [($159.12+$228.59)/2]*20 = $3,877.10
- For Initiative Petitions 2018-196, 2018-197, 2018-200, 2018-202, and 2018-204 through 209, [($159.12+$249.39)/2]*20 = $4,085.10
- For Initiative Petitions 2018-198, 2018-199, 2018-201, 2018-203, 2018-210 through 2018-212, [($159.12+$270.19)/2]*20 = $4,293.10

Consistent with Dr. Macpherson's 2012 report, it would be reasonable for the Auditor to assume that 35% of unemployed workers will receive unemployment benefits. Combining these numbers leads to the following estimates:

Year of final prescribed wage increase	Estimate of Missouri Workers Unemployed by Initiative	Estimated Unemployment Amount Per Worker	Estimated Total Unemployment Premiums Paid	Average Annual Unemployment Premiums Paid by State
2021 ($11)	38,512	3,877.10	$52,260,206.32	$17,420,068.77
2022 ($11)	33,150	3,877.10	$44,984,052.75	$11,246,013.19
2022 ($12)	64,236	4,085.10	$91,843,669.26	$22,960,917.32
2023 ($12)	56,895	4,085.10	$81,347,617.58	$20,336,904.39

[3] https://labor.mo.gov/DES/Claims/calculator. A 2015 law decreased the unemployment benefit period from 20 weeks to 13 weeks, but the Supreme Court of Missouri struck down the law in July 2016.

2023 ($13)	95,281	4,293.10	$143,167,801.39	$28,633,560.28
2024 ($12)	50,220	4,085.10	$71,803,802.70	$11,967,300.45
2024 ($13)	85,861	4,293.10	$129,013,450.69	$21,502,241.78
2025 ($13)	77,256	4,293.10	$116,083,706.76	$16,583,386.68
2026 ($13)	69,349	4,293.10	$104,202,767.17	$13,025,345.90

3. Impact on State Income Tax Revenue

The 2012 analysis prepared by Dr. Macpherson may also be used as a reference in calculating the effect of the initiative petitions on state income tax revenue. Here, again, it is reasonable to assume that our "affected workers" are evenly distributed, though precise CPS–ORG data would also provide a reliable estimate. Here, the increased income tax revenue is the additional income tax paid by workers whose wages increase. There is a loss of revenue, however, in the form of decreased income tax paid by workers whose wages decrease and businesses who absorb the increased cost of labor, rather than passing it along to customers.

For the purposes of these estimates, we assume that workers work 40 hours a week and 52 weeks per year:

Year of final prescribed wage increase	Estimate of Workers Affected	Estimate of Missouri Workers Unemployed by IP	Estimate of Missouri Workers with Increased Wages	Annual Increase in Wages Paid to Workers who get Wage Increase in Final Year	Annual Decrease in Wages Paid to Workers now Unemployed
2021 ($11)	174,897	38,512	136,385	$382,969,080.00	$108,141,696.00

2022 ($11)	162,262	33,150	129,112	$342,405,024.00	$87,913,800.00
2022 ($12)	225,866	64,236	161,630	$596,737,960.00	$237,159,312.00
2023 ($12)	212,532	56,895	155,637	$550,332,432.00	$201,180,720.00
2023 ($13)	275,061	95,281	179,780	$822,673,280.00	$436,005,856.00
2024 ($12)	199,683	50,220	149,463	$505,184,940.00	$169,743,600.00
2024 ($13)	261,136	85,861	175,275	$774,715,500.00	$379,505,620.00
2025 ($13)	247,695	77,256	170,439	$726,750,021.03	$329,419,584.00
2026 ($13)	234,683	69,349	165,334	$679,192,072.00	$284,885,692.00

These net wage increases will lead to corresponding increases in state income tax collections. Traditionally, it has been assumed that about 50% of affected workers will pay 6% income tax, while the other 50% of workers pay no state income tax. This assumption may be less accurate at the higher wage increases contemplated by the Initiative Petitions. Accordingly, figures are also displayed assuming that about 75% of affected workers will pay 6% income tax, while the other 25% of workers pay no state income tax.

Annual Net Increase in Wages Paid To Workers	Annual Income Tax Increase from Wage Increase (50% pay tax)	Annual Income Tax Increase from Wage Increase (75% pay tax)
$274,827,384.00	$8,244,821.52	$12,367,232.28
$254,491,224.00	$7,634,736.72	$11,452,105.08
$359,578,648.00	$10,787,359.44	$16,181,039.16
$349,151,712.00	$10,474,551.36	$15,711,827.04
$386,667,424.00	$11,600,022.72	$17,400,034.08
$335,441,340.00	$10,063,240.20	$15,094,860.30
$395,209,880.00	$11,856,296.40	$17,784,444.60
$397,330,437.03	$11,919,913.11	$17,879,869.67
$394,306,380.00	$11,829,191.40	$17,743,787.10

Graves Garrett LLC

Based on these figures, Missouri businesses must also decide whether to pass along any increase in wage costs (wages and mandatory payments).[4]

Year of final prescribed wage increase	Annual Cost to Business from Increased Wage	Annual Decreased Corporate Income Tax if cost is fully absorbed	Annual Decreased Corporate Income Tax if cost is 50% absorbed
2021 ($11)	$412,266,214.62	$25,766,638.41	$12,883,319.21
2022 ($11)	$368,599,008.34	$23,037,438.02	$11,518,719.01
2022 ($12)	$642,388,413.94	$40,149,275.87	$20,074,637.94
2023 ($12)	$592,432,863.05	$37,027,053.94	$18,513,526.97
2023 ($13)	$885,607,785.92	$55,350,486.62	$27,675,243.31
2024 ($12)	$543,831,587.91	$33,989,474.24	$16,994,737.12
2024 ($13)	$833,981,235.80	$52,123,827.23	$26,061,913.62
2025 ($13)	$782,346,397.64	$48,896,649.85	$24,448,324.93
2026 ($13)	$731,150,265.50	$45,696,891.59	$22,848,445.80

Assuming businesses absorb half of the cost of increased wages, and 75 percent of affected workers pay the new, higher taxes, the effect on state income tax collections is estimated to be:

Year of final prescribed wage increase	Annual Net Income Tax Revenue Loss
2021 ($11)	($516,086.93)
2022 ($11)	($66,613.93)
2022 ($12)	($3,893,598.78)
2023 ($12)	($2,801,699.93)
2023 ($13)	($10,275,209.23)
2024 ($12)	($1,899,876.82)
2024 ($13)	($8,277,469.02)
2025 ($13)	($6,568,455.26)
2026 ($13)	($5,104,658.70)

[4] A healthcare benefit cost estimate is not available based on the time limitations imposed by this fiscal note.

Graves Garrett LLC

4. Sales tax revenue gain or loss

Projecting any increase in sales tax revenue resulting from an increased minimum wage would require the auditor's office to conclude, based on data separate and apart from the sheer conjecture typically offered by political activist groups: (1) the net effect on consumer disposable income and (2) the percentage of a consumer's disposable income that is spent on goods subject to the sales tax, taking into consideration that the scope of Missouri's sales tax has been truncated by a voter-approved constitutional amendment from November 2016.

Typically, the Auditor's office multiplies the total increase in worker earnings (which should be adjusted for employment reductions) and multiplies the result by 25 percent, then multiplying that figure by the Missouri the population weighted combined average state and local sales tax in Missouri, 7.81%.[5] Based on this estimate, the population-weighted combined average local sales tax is 3.585%.

However, it would be deceptive to fail to account for sales tax losses from workers whose wages are eliminated or sales tax losses from reduced business profits (attributable to the higher wages paid), which will lower spending by business owners. The first figure is calculable by determining the total annual wages (adjusted for employment deductions) for all workers who lose jobs due to a minimum wage hike, multiplied by 25 percent. The second number is calculable by multiplying the total increase in worker earnings (multiplied by 1.0765 to account for Social Security and Medicare taxes) by approximately 15 percent.[6]

Year of final prescribed wage increase	Annual Net Increase in Wages Paid To Workers	New Wages Spent on Sales Tax Items	Annual Cost to Business from Increased Wage	Annual Business Income No Longer Included in Sales Tax Base (50% passed-through)
2021 ($11)	$274,827,384	$68,706,846	$412,266,214.62	($61,839,932)
2022 ($11)	$254,491,224	$63,622,806	$368,599,008.34	($55,289,851)
2022 ($12)	$359,578,648	$89,894,662	$642,388,413.94	($96,358,262)
2023 ($12)	$349,151,712	$87,287,928	$592,432,863.05	($88,864,929)

[5] http://taxfoundation.org/sites/taxfoundation.org/files/docs/LOST--2015.png.
[6] This estimate would also need to be adjusted to reflect certain employers' mandate under the Affordable Care Act to provide healthcare coverage and pay 60 percent of such coverage.

2023 ($13)	$386,667,424	$96,666,856	$885,607,785.92	($132,841,168)
2024 ($12)	$335,441,340	$83,860,335	$543,831,587.91	($81,574,738)
2024 ($13)	$395,209,880	$98,802,470	$833,981,235.75	($125,097,185)
2025 ($13)	$397,330,437	$99,332,609	$782,346,397.64	($117,351,960)
2026 ($13)	$394,306,380	$98,576,595	$731,150,265.51	($109,672,540)

Accordingly, the annual estimations of the effects on state and local revenue, and total state economic impact are as follows:

Year of final prescribed wage increase	Annual Net Income Tax Revenue Loss	Annual Net Effect on State Sales Tax	Total Annual Effect on State Tax Revenue	Total Net Loss to State Government from Taxes and Unemployment Insurance	Annual Net Effect on Local Sales Tax
2021 ($11)	($516,086.93)	$290,127.11	($225,959.82)	($17,646,028.59)	$246,178.86
2022 ($11)	($66,613.93)	$352,067.34	$285,453.41	($10,960,559.78)	$298,736.43
2022 ($12)	($3,893,598.78)	($273,087.10)	($4,166,685.88)	($27,127,603.19)	($231,720.06)
2023 ($12)	($2,801,699.93)	($66,628.31)	($2,868,328.24)	($23,205,232.64)	($56,535.50)
2023 ($13)	($10,275,209.23)	($1,528,364.68)	($11,803,573.91)	($40,437,134.18)	($1,296,849.08)
2024 ($12)	($1,899,876.82)	$96,566.47	($1,803,310.36)	($13,770,610.81)	$81,938.65
2024 ($13)	($8,277,469.02)	($1,110,951.72)	($9,388,420.74)	($30,890,662.52)	($942,665.55)
2025 ($13)	($6,136,139.31)	($761,317.55)	($6,897,456.87)	($23,480,843.55)	($645,993.71)
2026 ($13)	($5,104,658.70)	($468,803.67)	($5,573,462.37)	($18,598,808.26)	($397,789.62)

5. Damage to small business

Additionally, any proponent or opponent fiscal note submission is required, pursuant to Missouri law, to state the impact of the initiative on small businesses. According to analysis by the Employment Policies Institute, 40 percent of the minimum wage workforce is employed at businesses with fewer than 50 employees. [7] The impact on extra costs to small business may be more significant than even this 40% figure suggests. Small businesses are more easily shut down by input price increases than large businesses, which have greater access to capital to weather the

[7] https://www.epionline.org/oped/who-really-employs-minimum-wage-workers/

storm. Clearly, small businesses that do not shut down due to increases in the minimum wage will pay higher costs, estimated at about 40% of business' total increased costs, described above.

Conclusion

In conclusion, the State Auditor should attempt to quantify the increased cost to be borne by state and local government entities through increased contracting costs as a result of an increase to the minimum wage. This direct cost is outlined in Section 1.

Indirect costs are outlined in Sections 2 through 5, and show a net loss. Although such second-order effects more difficult to predict, a net loss is easily the most likely outcome. Significantly, this result is only obtainable if the Auditor reviews both the "credit" and "debit" sides of the transfer of wealth from businesses to workers. The Auditor should refrain from taking the proponents' likely invitation to consider and present only the "credit," side, and should attempt to provide a complete picture of all effects of a minimum wage increase, including the loss of revenue to state and local governments from individuals who lose employment. Only conveying (or quantifying) the potential for gain, without fairly conveying the likelihood of net loss, would be deceptive and unfair.

The State Auditor's previous 2018 fiscal notes are a good model. Each of the fiscal notes for the Initiative Petitions should follow the already-established format and state that:

> "[O]perating costs could increase by an unknown annual amount that could be significant. State and local government tax revenue could change by an unknown annual amount ranging from a $## million decrease to a $## million increase depending on business decisions."

Should you desire further detail or have any questions about this fiscal impact statement, please do not hesitate to contact me.

Sincerely,

Edward D. Greim

ABOUT THE MISSOURI RESTAURANT ASSOCIATION

With origins dating back to 1916, the Missouri Restaurant Association (MRA) is a statewide trade association representing over 1,500 member establishments. The association's membership is diverse, and includes full service, fast casual, and quick service restaurants, cafeterias, hotels, schools, institutions, contract feeders, and ancillary foodservice providers such as theme parks. The association has been successful in securing support from virtually every segment of the foodservice and hospitality industry.

MRA includes seven chapters as extensions of the parent organization, each with its own Officers, Board of Directors, and limited budget. The association is governed by a Board of Directors comprised of five Officers, 33 Directors, and each President of the seven affiliated chapters.

MRA is dedicated to serving the needs of the foodservice and hospitality industry, enhancing and improving its growth and development, assisting and educating its members in operating more effectively, improving the political and social environment in which the industry conducts business, for the benefit of its members, patrons, employees, and the well-being of the community.

David A. Macpherson is the E.M. Stevens Professor of Economics at Trinity University. He received undergraduate and doctoral degrees in economics from Pennsylvania State University.

Dr. Macpherson has published over 60 articles in leading economics and real estate journals including Review of Economics and Statistics, Industrial and Labor Relations Review, Journal of Labor Economics, Journal of Human Resources, and Journal of Real Estate Economics and Finance. His research has been funded by a variety of entities including the National Science Foundation, Florida Legislature, and the National Association of Realtors. He is co-author of the undergraduate labor economics text, Contemporary Labor Economics, as well as the principles of economics text, Economics: Private and Public Choice. He is included in Who's Who in Economics, Fourth Edition, which includes the 1,200 most frequently cited economists.

THE IMPACT OF A $10.10 MINIMUM WAGE ON JOBS AND TAXPAYER COSTS IN MISSOURI

June 2014

Technical Appendix 7

EXECUTIVE SUMMARY

Missouri's minimum wage of $7.50 is linked to rise in most years with the inflation rate. But some state legislators and labor unions would like to raise that figure even higher. For instance, a recent labor union-organized bus tour in the state promoted a $10.10 minimum wage in St. Louis.

Proponents have enthusiastically pointed to the benefits of the $10.10 policy. But there's been far less discussion of the costs involved with a $10.10-an-hour minimum wage—both the cost on employment, and the cost to taxpayers.

In this study, labor economist David Macpherson of Trinity University uses Census Bureau data to estimate the impact on Missouri's labor market and budget from raising the minimum wage to $10.10 an hour. He also provides separate results for the St. Louis metropolitan area.

Dr. Macpherson's employment estimates follow the methodology used by the nonpartisan Congressional Budget Office in its report earlier this year estimating the impact of a $10.10 minimum wage nationwide, which in turn relied on 60 different empirical studies to formulate its estimates.

Statewide, he finds that over 15,000 jobs would be lost at the $10.10 wage level—with 9,300 of those jobs being held by women. In the St. Louis metropolitan area, approximately 4,800 jobs would be lost from a $10.10 minimum wage.

The cost to taxpayers would be significant: There are approximately 40,000 state and local employees whose wages would be affected by the $10.10 increase in Missouri, for a combined cost to taxpayers of $87 million annually.

Raising wages is an admirable goal, but the evidence suggests that accomplishing this goal with a blunt wage mandate could do more harm than good.

RESULTS

The minimum wage is one of the most hotly-debated topics in the political world. Some legislators claim that a higher base wage will stimulate the economy; others claim that it will reduce jobs when affected employers can't offset the higher costs through higher prices.

Economists, who have studied the issue since the late 1940s, tend to take a skeptical view of minimum wage increases. Since the early 1990s, for instance, roughly 85 percent of the most credible research on the minimum wage points to job loss for less-skilled groups. The nonpartisan Congressional Budget Office (CBO), in an evaluation of President Obama's proposed $10.10 minimum wage increase, reviewed 60 different studies and concluded that the policy would eliminate 500,000 jobs if enacted.

The estimates that follow, of the employment impact of a higher minimum wage on Missouri's labor market, were performed by Dr. David Macpherson of Trinity University. Dr. Macpherson followed closely the methodology used by the CBO in its 2014 report. Dr. Macpherson also estimates the taxpayer costs of a higher minimum wage, as many state and local public employees will see their earnings increase when the minimum wage rises.

Dr. Macpherson's methodology is presented in detail in a technical appendix.

Estimated Employment Effects of a $10.10 Minimum Wage in Missouri

Statewide, Dr. Macpherson finds that increasing the minimum wage to $10.10 would eliminate over 15,000 jobs—approximately 60 percent of which are jobs held by women. The bulk of the job losses would be concentrated among individuals with a high school degree or less, and among people who work in the retail or leisure & hospitality industries.

(Note: Totals have slight discrepancies due to rounding.)

City-Specific Minimum Wage Employment Impacts

The city of St. Louis has been the subject of a number of protests calling for a higher minimum wage. Dr. Macpherson analyzed the employment impact of a $10.10 minimum wage in the St. Louis metropolitan area, providing breakouts by gender and education where the data permits. He estimates that the wage hike would eliminate approximately 5,000 jobs—just over half of which would be jobs held by women.

RESULTS CONTINUED

Missouri Taxpayer Costs of a $10.10 Minimum Wage

Dr. Macpherson estimates that approximately forty thousand state & local public employees would be affected by a minimum wage increase to $10.10 an hour. These additional wage costs translate to new costs for state and local taxpayers. Following the methodology described in detail in the technical appendix, Dr. Macpherson estimates both the straight wage cost of a $10.10 minimum wage, as well as the total compensation cost with Social Security, Medicare, workers compensation, and unemployment insurance included. Statewide, taxpayers would shoulder an additional $87 million in costs if the base wage was increased to $10.10 an hour and public employees were covered by the new wage.

Missouri Taxpayer Costs of a $10.10 Minimum Wage	
# of State & Local Workers	304,588
# Affected By $10.10 MW	40,103
Annual Wage Cost	$79,629,374
Annual Compensation Cost	$87,004,355

Note: Annual compensation costs include the cost of worker's compensation, FICA, and unemployment insurance benefits.

TECHNICAL APPENDIX

Estimating Employment Loss and the Cost to State and Local Government of an Increase in the Minimum Wage

Dr. David Macpherson
E.M. Stevens Professor of Economics
Trinity University

This paper describes how we estimate the employment loss and the cost to state and local governments of a proposed increase in the minimum wage effective on January 1, 2015.

Data and Sample

First, we use data from the Current Population Survey (CPS) Outgoing Rotation Groups (ORG) from January 2011 through December 2013. For each worker in the sample, we calculate their wage rate. We also adjust the wage rate to reflect a forecast of wages in 2015. This is done in two steps. First, based on legislation enacted as of April 2014, we estimate the minimum wage that would be in effect in January 2015 for each state and city that we consider. If a state or city has an indexed minimum wage, we increase the January 2014 state or city minimum wage by the Congressional Budget Office (CBO) inflation forecast for 2014 of 1.7%.

Since we use data from 2011 through 2013, we also follow the CBO approach for forecasting what the wage distribution would be in 2015. This is done in two steps. First, we adjust wages observed prior to 2013 to reflect 2013 minimum wage legislation. For example, if the minimum wage in a state was $7.25 in 2011 and grew to $8.00 by 2013, anyone who earned between $7.25 and $8.00 in 2011 would have their wage increased to $8.00. After wages are adjusted to 2013 levels, we assume that all wages grow by 2.9% in 2014. Using the resulting 2015 distribution of wages, we adjust for minimum wage legislation that would increase the minimum between 2013 and 2015. Anyone earning a wage between the 2013 and 2015 minimum wage is assigned a wage matching the 2015 minimum wage.

After generating the forecast 2015 distribution of wages reflecting wage growth and existing minimum wage legislation, we identify workers who would be affected by additional changes to the 2015 minimum wage as those with wages between the predicted minimum wage legislated for 2015 (or up to $.25 below it) and the proposed minimum.

To estimate the number of affected workers, we take two steps. First, for each state, we estimate the number of affected workers for 2013. Second, we adjust the weights in the 2011 and 2012 data so that the state-specific number of affected workers implied by the 2011 and 2012 data matches that for 2013. This adjustment is designed to correct for the changing economic climate as the economy recovers from the great recession and to generate estimates that are as close as possible to the most recent data (2013). After we adjust the 2011 and 2012 weights, we estimate the number of affected workers by summing their earnings weights and dividing the total by 36 (the number of months of data).

[1] Also, following CBO, anyone earning up to $.25 less than the 2011 minimum wage would have their wage increased by the amount that the minimum wage increased (i.e. a $7.00 wage would be increased to $7.75 in this example). This approach is used to adjust for the fact that many workers round their answers when asked about their wage.

TECHINCAL APPENDIX CONTINUED

Employment Loss

To estimate employment loss, for each affected worker we compute:

L = e *(Proposed Min Wage /Min Wage 2015 – 1)

where e is an assumed elasticity of employment with respect to changes in the minimum wage, Min Wage 2015 is the minimum wage currently legislated for 2015, and Proposed Min Wage is the minimum wage that is being proposed for 2015. Thus, for example, if a worker is projected to earn the federal minimum of $7.25 in 2015, the expected reduction in employment resulting from a $10.10 minimum wage in 2015 if e=.45 is .45*(10.10/7.25 – 1) = .18. That is, for every 100 workers currently earning the federal minimum, the expectation is that 18 would lose a job if the minimum wage elasticity is .45.

To estimate the aggregate employment loss in the economy, we use earnings weights to sum L across workers. We also follow the Congressional Budget Office (2014) and use an elasticity of 0.15 for non-teenagers and 0.45 for teenagers.

Cost to State and Local Government

We use the same data to estimate the cost to state and local government of a proposed minimum wage hike. We apply the same definition of affected workers described above and estimate the number of state and local government workers affected by a minimum wage hike. We do not, however, assume that there is any job loss for state and local workers as we do not have an appropriate elasticity estimate specific to state and local workers. To the extent that state or local governments reduce hours or employment in response tothe minimum wage hike, our estimate of the cost of the hike would be overstated.

To estimate the increase in annual payroll cost resulting from an increase in the minimum wage, we estimate the increase in annual cost for each worker as:

(Proposed Min Wage-Min Wage 2015)*weekly hours*52

We then multiply the increase in annual cost by the earnings weight for each worker and sum across workers. Since an increase in wages also requires increased employer contributions for Social Security, Medicare, workers' compensation and unemployment insurance, we apply an estimate of the payroll tax rate for these mandatory programs to calculate the additional cost for these programs.

For each state and city considered, we provide tables summarizing the number of affected workers, employment loss, and the distribution of employment loss by sex, education, race, age and industry. Given that we use three years of data, a rule of thumb for minimum sample size required to achieve a reasonably accurate estimate of the employment loss is to require at least 30,000 people be in the relevant category. For example, if there are fewer than 30,000 people projected to be in a particular industry category, the Bureau of Labor Statistics would not report the estimate due to a lack of reliability based on the variance of the estimate relative to its mean.

In addition to the estimate of employment loss, for each state or city considered, we estimate the number of state and local workers that would be affected by the minimum wage hike and the total annual cost to government in terms of wages and total compensation. As with the employment estimates, we advise caution in interpreting estimates that are based on fewer than 30,000 affected workers.

[3] Congressional Budget Office, "The Effects of a Minimum-Wage Increase on Employment and Family Income," February 2014.

[4] For workers paid by the hour the reported hourly wage was used. For workers who are not paid by the hour, we calculate the hourly wage by dividing usual weekly earnings by usual weekly hours. Overtime pay was calculated as time and one-half for hours above 40 hours for hourly workers.

[5] The assumed payroll tax for Medicare and Social Security is 7.65 percent. To estimate the payroll tax for workers' compensation and unemployment insurance, we use unpublished data from the 2010 Employer Cost of Employee Compensation database for state and local workers in the relevant region in 2010.

FISCAL ANALYSIS
OF
PROPOSED STATUTORY INITIATIVE PETITIONS 2012-084 AND 2012-085

Prepared for

Victor Allred versus Robin Carnahan and Thomas Schweich
Circuit Court of Cole County, Missouri

FISCAL ANALYSIS
OF
PROPOSED STATUTORY INITIATIVE PETITIONS 2012-084 AND 2012-085

I. Introduction

This report was undertaken at the request of counsel representing plaintiffs in the case of Victor Allred versus Robin Carnahan and Thomas Schweich. As part of the basis of the lawsuit, the plaintiffs allege that the fiscal note summaries for proposed statutory initiative petitions 2012-084 and 2012-085 are insufficient and unfair. I was asked by counsel to evaluate the fiscal impact of proposed statutory initiative petitions 2012-084 and 2012-085.

The results of my analysis indicate:

(1) labor costs to state and local government entities, based on state auditor fiscal notes, will rise by more than $1,352,182. A more inclusive estimate indicates that state and local government labor costs will increase by $16,003,712;

(2) unemployment benefit costs will rise by $4,397,510 during the first year of the minimum wage increase;

(3) individual income tax revenue will rise by at most $4,078,088;

(4) the loss in corporate income tax revenue could be as high as $9,243,105;

(5) state and local sales tax revenue will rise by at most $2,919,327;

(6) during the first year: state and local governments will incur increased costs of $20,401,222; the change in state and local government revenue will

range from -$2,245,690 to +$6,997,415; and the net state and local government fiscal impact will range from -$22,646,912 to -$13,403,807.

The report is organized as follows. My qualifications to prepare this report are contained in Section II. Section III describes the data and records I relied upon for this report. Section IV reviews the estimated fiscal impact of proposed statutory initiative petitions 2012-084 and 2012-085. A summary and my conclusions are provided in Section VI.

II. Qualifications

I am currently the E.M. Stevens Professor of Economics at Trinity University in San Antonio, Texas. Previously, I was employed by Florida State University as Director of the Pepper Institute on Aging and Public Policy and the Rod and Hope Brim Eminent Scholar in Economics. I have taught both undergraduate and graduate Econometrics (statistical analysis of economic data), and Labor Economics. I have published over 50 articles in peer-reviewed professional journals.

I am currently serving on the editorial board of the *Journal of Forensic Economics*, which is a peer-reviewed journal. I have also served as a reviewer or 'referee' for 24 peer-reviewed journals, including the *Journal of Human Resources, Journal of Labor Economics, Quarterly Journal of Economics,* and the *Review of Economics and Statistics*. Based upon these experiences, I am very familiar with the scholarly and professional research process and the concept of peer review.

I have prepared numerous analyses and reports that use statistical methods as applied to specific questions. I have been responsible for developing the techniques and approaches required for these analyses. I routinely use computers and statistical software packages to assist me in my analytical work. I have been qualified as an expert witness on statistical analysis of employment discrimination and economic damages in state courts in Florida and Georgia and Federal Courts, and I have given expert testimony. I have prepared analyses and offered testimony on behalf of both plaintiffs and defendants.

Details of my qualifications are reflected in my current resume and legal cases, attached as Appendix A to the report.

III. Data and Records

I reviewed the following materials in preparing this report.

- Plaintiff's Complaint
- Material cited in footnotes below.

IV. Fiscal Impact

A. Overview

The proposed statutory initiative petitions 2012-084 and 2012-085 contain many elements in common. Both initiatives would increase the Missouri minimum wage to $8.25 per hour, alter the exemption for retail and service firms, raise the cash wage of tipped workers from 50% to 60% of the minimum wage, and increase the statute of limitation from two to three year for underpayment claims.

The initiatives differ in their linkage to the federal minimum wage. Initiative petition 2012-084 requires that the state minimum wage be automatically increased to the

federal minimum wage if it is higher than the state minimum wage. Initiative petition 2012-085 does not have such a linkage. It only requires that workers be paid the higher of the state minimum wage or the federal minimum wage. The linkage to the federal minimum wage will cause the state minimum wage to be higher under initiative petition 2012-084 over time. This is because the state minimum wage, in contrast to the federal minimum wage, is adjusted for inflation as measured by the Consumer Price Index.

An increase in the minimum wage in Missouri will affect state and local government entities in two ways. First, it will directly increase the cost of labor to state and local government entities. This will occur due to the increase in wages of state and local government workers earning between the existing minimum wage of $7.25 and the new minimum wage of $8.25.[1] In addition, workers laid off due to the minimum wage increase can collect unemployment benefits. The state government will bear the cost of unemployment benefits of these workers for the first 20 weeks. Second, state and local government may gain increased revenue through higher income tax and sales taxes paid by workers affected by the minimum wage who remain employed. However, state and local government will suffer reduced tax revenue to the extent the higher wage cost lowers profits of businesses.

The following sections estimate the cost and revenue effects to state and local government entities of the proposed minimum wage increase.

[1] Information about the minimum wage in Missouri is available at http://www.labor.mo.gov/DLS/minimumwage/.

B. Direct Labor Cost Impact on State and Local Government Budgets

There are two possible ways to measure the direct labor cost on state and local government budgets. First, one can use the information included in the fiscal notes prepared by the State Auditor regarding the proposed initiatives. It is important to note that the fiscal notes provide an incomplete and thus too low estimate of the direct labor cost. The fiscal notes indicate that the Office of Administration's (OA) Division of Personnel reported that as of September 2011 there were 834 state workers who would be affected by an increase of the minimum wage to $8.25 and the "approximate annual cost" would be more than $540,000.

This OA estimate excludes seasonal workers such as State Fair employees, State Parks Employees, and tax season staff. The Division of Revenue noted its labor cost would rise by $40,000. The Division of Natural Resources stated they have over 500 workers who would be affected by the increase, but did not provide an estimate of the cost. The State Fair hired 745 workers that would be affected, but no cost estimate was provided.

Thus, the cost to state government, based on the fiscal notes, would be more than $580,000.

The fiscal notes also provide an incomplete and thus too low measure of the cost to local government and public educational institutions. Many cities and educational institutions did not respond to Office of Auditor's survey or provide an estimate of the cost of the higher minimum wage. The City of Columbia, City of Jefferson, City of

Joseph, Linn State Technical College, and Metropolitan Community College did provide such an estimate. The total cost to these five institutions is $772,182.

Based on the fiscal notes, the cost to state and local government entities of the increase in the minimum wage to $8.25 will be more than $1,352,182.

Second, data from the U.S. Census Bureau's Current Population Survey (CPS) can also be used to calculate the cost of the increased labor cost to state and local government entities in Missouri. Using the data from January 2010 to December 2011 Outgoing Rotation Group (ORG) CPS, I calculated that 17,089 state and local government workers would be affected by the minimum wage increase. I defined affected workers as those individuals earning between $7.00 and $8.24 per hour. Though the minimum wage was $7.25 per hour during this period, I also included those workers reporting earnings of $7.00 to $7.24 since some individuals may round their wage rate. I calculated the annual wage cost for each state and local government worker (i) in the ORG CPS as:

$$Annual\ Wage\ Cost_i = (\$8.25 - current\ wage_i) * weekly\ hours_i * 52.$$[2]

The average annual wage cost increase was $870. I summed the cost over each worker (i) to obtain the total wage cost to state and local government entities in Missouri of $14,866,430.

The increased wage cost is not the only labor cost to state and local government entities of the minimum wage increase. Employers are required to pay 7.65% of their wage costs in Social Security and Medicare taxes. Thus, the total labor cost of the minimum wage increase will be 1.0765 times $14,866,430 or $16,003,712.

---

[2] I assume that persons reporting an hourly wage rate between $7.00 and $7.24 are actually earning $7.25 per hour.

C. Unemployment Benefit Impact

The higher minimum wage will cause firms to reduce their level of employment.[3] As a result, the number of unemployed workers will increase. Thus, another important fiscal cost of the minimum wage increase is the cost of the unemployment insurance benefits for the workers laid off as a result of the minimum wage increase.

To calculate the cost to the unemployment benefits program, I first calculated the number of workers laid off. To do so, I calculated a probability of job loss for each affected Missouri worker (i) in the January 2010 to December 2011 ORG CPS:

$$Probability\ Job\ Loss_{\ i} = \frac{(\$8.25 - Current\ Wage_i)}{Current\ Wage_i} * elasticity_i.$$

I used the preferred employment elasticity (i.e., sensitivity of employment to wage changes) contained in Sabia and Burkhauser (2010), which was -0.6 for individuals aged 16 to 29 without a high school degree and -0.2 for all other individuals. The sole exception was for state and local government workers, where I assumed an elasticity of zero.[4] The sum across all affected workers yielded an estimated job loss of 5,745 jobs.

The next step was to calculate the weekly benefit for the average unemployed worker. Using the benefits calculator on the Missouri unemployment benefits web site and the wage income of average private-sector affected worker ($10,937), yields an average weekly benefit of $109.36[5]. The state of Missouri pays the first 20 weeks of benefits.[6] Thus, each eligible unemployed worker could receive a total of $2,187.20 in

---

[3] For a survey of research regarding the effect of the minimum wage on employment, see David Neumark and William L. Wascher, *Minimum Wages* (Cambridge, MA: MIT Press, 2008).
[4] Joseph J. Sabia and Richard V. Burkhauser, "Minimum Wages and Poverty: Will a $9.50 Federal Minimum Wage Really Help the Working Poor?" *Southern Economic Journal* (January 2010): 592-623.
[5] http://www.labor.mo.gov/DES/Claims/calculator.asp
[6] See http://www.labor.mo.gov/DES/Claims/

benefits paid for by the state of Missouri. These jobs are permanently eliminated and so it is appropriate to calculate the full amount of benefits for each worker.

Unemployment insurance, however, does not cover all unemployed workers. For example, it does not cover people who leave a job voluntarily, people looking for their first job, and re-entrants who previously left the labor force voluntarily. Furthermore, some individuals don't apply for benefits even though they are eligible. I assume that 35% of the unemployed workers will receive unemployment benefits based on analysis by Wenger (2001).[7]

The last step is to calculate the total cost to the Missouri unemployment benefits program. This done by multiplying the number of jobs lost (5,745) times the average benefit amount ($2,187.20) times the percent of unemployed individuals collecting benefits (35%). This calculation yields a figure of $4,397,510. This cost would be borne only during the first year of the minimum wage increase. The inflation adjustments in the minimum wage will also yield costs to the unemployment insurance program, but it is not possible to estimate the amount.

D. Impact on State Income Tax Revenue

The state of Missouri will gain increased revenue through higher income tax taxes paid by workers affected by the minimum wage who remain employed. However, it will

[7] Jeffery Wenger. "Divided We Fall: Deserving Workers Slip through America's Patchwork Unemployment Insurance System." *Economic Policy Institute*, 2001. Sabia and Burkhauser (2010) make the same assumption in their calculation of the amount of unemployment benefits generated by a minimum wage increase.

suffer reduced corporate income tax revenue to the extent the higher wage cost lowers profits of businesses.

To calculate the impact on individual income tax revenue, I again used data from January 2010 to December 2011 ORG CPS. I defined affected workers as those Missouri individuals earning between $7.00 and $8.24 per hour.[8] I used the following formula to estimate the change in income tax revenue:

$$\Delta Tax\ Revenue_i = (Tax_After_i - Tax_Before_i) - Prob_Job_Loss_i * Tax_Before_i,$$

where Tax_After_i is the income tax paid by worker i after the minimum wage increase. Tax_Before_i is the income tax paid by worker i after the minimum wage increase, and $Prob_Job_Loss_i$ is the probability of job loss for worker i. The first term shows the change in individual income tax revenue assuming no job loss and the second term shows the loss in tax revenue due to the employment loss caused by the minimum wage increase.

The income tax calculations were based on two assumptions.[9] First, the 50% percent of affected workers who were under the age 25 who were assumed to be dependents on another person's tax return. As a result, it was assumed that the affected workers' earnings were taxable at the maximum Missouri income tax rate of 6% both and after the minimum wage increase.[10] Second, all persons age 25 and older were assumed to be paying little or no income tax after exemptions and deductions. Thus, about 50% of the earnings increase will be taxed at a rate of 6%.

---

[8] I again assume that persons reporting an hourly wage rate between $7.00 and $7.24 are actually earning $7.25 per hour. The annual earnings level was calculated as the worker's wage rate times usual weekly hours worked times 52.

[9] The same assumptions are used in the State Auditor's fiscal notes for the initiatives.

[10] This assumption will overstate the revenue increase as 20% of affected workers under the age 25 are living by themselves and some of these individuals will not be a dependent on another person's tax return.

The tax calculations reveal an increase in income tax revenue increase to the state. Assuming no workers were laid off by the minimum wage increase, income tax revenue would rise by $6,043,534. However, the state will lose $1,965,446 in income tax revenue due to the lost earnings of private-sector workers no longer employed due to the minimum wage hike.[11] Thus, the net increase in individual income tax revenue is $4,078,088.

Businesses have three options to respond to the higher labor costs of a higher minimum wage. They can reduce their profits, raise prices, or lay off workers. Based on the 2010-2011 ORG CPS data, the minimum wage increase will raise private-sector labor costs by $192,620,900 if employment levels are not reduced. However, labor costs will be lowered by $55,240,790 due to the reduction in employment. Thus, labor costs will, on net, rise by $137,380,110. These increased labor costs may be either passed on to consumers through higher prices or reduced profits or more likely some combination of higher prices and reduced profits. Assuming that businesses absorbed all of the higher costs through reduced profits, the corporate income tax revenue would fall by the Missouri corporate income tax of 6.25% times the rise in labor costs of $137,380,110 * 1.0765 (to account for employer-paid Social Security and Medicare taxes) or $9,243,106.[12] Alternatively, if half of the higher labor costs were passed on to consumers, then corporate income tax revenue would fall by $4,621,553.

[11] The probability of job loss was calculated in the same manner as in the prior section.
[12] The corporate income tax for Missouri is available at: http://dor.mo.gov/business/corporate/

E. Impact on State and Local Sales Tax Revenue

To calculate the impact on state and local sales tax revenue the following approach was undertaken.[13] First, the total increase in worker earnings, adjusted for employment reductions, was calculated using the 2010-2011 ORG CPS. This figure was $152,246,540. Second, the increase in Missouri taxable sales was calculated as 25% of the earnings increase or $38,061,635. Third, the increase in sales tax revenue was calculated by multiplying the taxable sales change times the average state and local rate of 7.67% or $2,919,327.[14]

The higher minimum wage may decrease sales tax revenue to the extent that it reduces business profits, which will lower spending by business owners.

VI. Summary and Conclusions

I was asked by counsel to evaluate the fiscal impact of proposed statutory initiative petitions 2012-084 and 2012-085.

The results of my analysis indicate:

(1) labor costs to state and local government entities, based on state auditor fiscal notes, will rise by more than $1,352,182. A more inclusive estimate indicates that state and local government labor costs will increase by $16,003,712;

[13] The same general approach is used in the State Auditor's fiscal notes for the initiatives.
[14] The average rate comes from http://taxfoundation.org/news/show/27023.html

(2) unemployment benefit costs will rise by $4,397,510 during the first year of the minimum wage increase;

(3) individual income tax revenue will rise by at most $4,078,088;

(4) the loss in corporate income tax revenue could be as high as $9,243,105;

(5) state and local sales tax revenue will rise by at most $2,919,327;

(6) during the first year: state and local governments will incur increased costs of $20,401,222; the change in state and local government revenue will range from -$2,245,690 to +$6,997,415; and the net state and local government fiscal impact will range from -$22,646,912 to -$13,403,807.

FISCAL ANALYSIS
OF
PROPOSED STATUTORY INITIATIVE PETITIONS 2012-084 AND 2012-085

Ph.D., Economics, The Pennsylvania State University.
B.S., Economics, The Pennsylvania State University.

Current Positions

E.M. Stevens Professor of Economics, Trinity University, 2009-
Research Fellow, Institute for the Study of Labor (IZA), Bonn, 2004-.

Previous Positions

Rod and Hope Brim Eminent Scholar in Economics, FSU 2004-2009.
Director, Pepper Institute on Aging and Public Policy, FSU, 2003-2009.
Abba P. Lerner Professor of Economics, FSU, 2000-2009.
Professor, Department of Economics, Florida State University, 1996-2009.
Director of Research, Pepper Institute on Aging and Public Policy, FSU, 1995-2000.
Associate Professor, Department of Economics, Florida State University, 1993-1996.
Research Associate, Pepper Institute on Aging and Public Policy, FSU, 1993-2001, 2003-2009.
Visiting Associate Professor, Department of Economics, Florida State University, 1992-1993.
Research Affiliate, Pepper Institute on Aging and Public Policy, FSU, 1992-1993, 2001-2003.
Associate Professor, Department of Economics, Miami University, 1991-1993.
Assistant Professor, Department of Economics, Miami University, 1987-1991.

Research Areas

Labor Economics, Labor Market Aspects of Pensions, Labor Unions, Racial and Gender Differences in the Labor Market, Minimum Wage, Deregulation.

Teaching Areas

Principles of Microeconomics and Macroeconomics, Intermediate Microeconomics, Money and Banking, Econometrics (undergraduate and graduate), Labor Economics and Labor Relations (undergraduate and graduate).

Books

Miami University Faculty Research Grant, 6/1990-8/1990, $4,000, "The Role of Firm Size in Pension Coverage and Options."

Miami University Faculty Research Grant, 6/1989-8/1989, $4,000, "Declining Unionism and the Gender Wage Gap," with William Even.

Participation in National Meetings

Panel Discussant, American Real Estate and Urban Economics Association/ASSA meetings, January 2008.

Presented, "Employee Turnover in the Long-Term Care Industry," at Academy Health Annual Research Meetings, June 2007.

Presented, "Participant Direction in Defined Contribution Pension Plans," at International Atlantic Economic Society meetings, October 2006.

Presented, "The Risk and Return of Pension Investments in Employer Stock," at International Atlantic Economic Society meetings, October 2005.

Presented, "Replacing Earnings After Termination: Evidence from the Displaced Worker Survey," at the Allied Social Science Association/National Association of Forensic Economics, January 2002.

Presented, "Labor Market Transitions of Older Workers," at the Allied Social Science Association/Society of Government Economists meetings, January 1999.

Presented, "Why has the Loss in Pension Coverage Accelerated Among Less Educated Workers?" at the American Economic Association Meetings, 1995.

Presented, "Wages and Gender Composition: Why Do Women's Jobs Pay Less?" at the American Economic Association Meetings, 1994, with Barry Hirsch.

Presented, "Pensions, Labor Turnover, and Employer Size" at the American Economic Association Meetings, 1993, with William Even.

Presented, "Why Did Male Pension Coverage Decline in the 1980s?" at the American Economic Association meetings, 1992, with William Even.

Participation in Regional Meetings

Presented "Unions and Pension Performance: The Role of Pension Design," at Southern Economics Association meetings, November 2009.

Panel member, "Recent Federal Reserve Policy: An Evaluation" at Southern Economics Association meetings, November 2009.

Discussant, "Topics in Health Economics," at Southern Economics Association meetings, November 2009.

Discussant, "Teacher Pay, Principals, and Schooling," at Southern Economics Association meetings, November 2009.

Presented "Is Bigger Still Better?: The Decline of the Wage Premium at Large Firms," at Western Economic Association meetings, July 2009.

Presented "Is Bigger Still Better?: The Decline of the Wage Premium at Large Firms," at Eastern Economic Association meetings, February 2009.

Panel Discussant at the Southern Economic Association meetings, November 2008.

Presented "Is Bigger Still Better?: The Decline of the Wage Premium at Large Firms," at Southern Economic Association meetings, November 2008.

Presented "The Growth of Participant Direction in Defined Contribution Pensions," at Western Economic Association meetings, July 2008.

Chair "Pensions and Retirement" Session at Southern Economic Association meetings, November 2007.

Presented "The Growth of Participant Direction in Defined Contribution Pensions," at Southern Economic Association meetings, November 2007.

Presented, "Participant Direction in Defined Contribution Pension Plans," at Southern Economic Association meetings, November 2006.

Panel Discussant, Southern Economic Association meetings, November 2005.

Presented, "Do Pensions Impede Phased Retirement?" at the Southern Economic Association meetings, November 2004.

Presented, "When Will the Gender Gap in Retirement Income Narrow?" at the Southern Economic Association meetings, November 2003.

Presented, "How Will the Growth of DC and 401(k) Plans Affect Pension Income?" at the Southern Economic Association meetings, November 2002.

Presented, "Racial Composition, Wages, and Quality Sorting," at the Southern Economic Association meetings, November 1999.

Presented, "Racial and Ethnic Differences in Pension Coverage and Benefit Levels," at the Southern Economic Association meetings, November 1998.

Presented, "Factors Influencing Participation and Contribution Levels in 401(k) Plans," at the Western Economics Association meetings, July 1998.

Presented, "Aging at Work: Employment Determination, Firm Strategies, and Public Policy in the United States," at the Western Economic Association meetings, July 1994.

Presented, "Why Did Male Pension Coverage Decline in the 1980s?" at the Western Economic Association meetings, July 1992.

Presented "Plant Size and the Decline of Unionism," at the Southern Economic Association meetings, 1989, with William Even.

Panel Discussant, Southern Economic Association meetings, November 1989.

Presented "The Labor Force Participation and Earnings Profiles of Married Female Immigrants," at the Southern Economic Association meetings, November 1988.

Presented "Pensions, Screening, and the Gender Wage Gap," at the Southern Economic Association meetings, November 1988.

Session Chair and Panel Discussant at the Southern Economic Association meetings, November 1988.

Participation in Invited Seminars, Conferences, and other Presentations

Presented, "Teaching Macroeconomics During Troubled Times," at Creative Ideas for Your Basic Economics Course Conference at Florida State University, February 2012.

Presented, "Participant Direction in Defined Contribution Pension Plans," at Pennsylvania State University, April 2010.

Presented, "The Parallels Between the Japanese Economic Crisis of the 1990s and the US Today" at Creative Ideas for Your Basic Economics Course Conference at Florida State University, February 2010.

Chair "Minimum Wage & EITC" Session at Society of Labor Economists meetings, May 2009.

Presented "Participant Direction in Defined Contribution Plans," at Lehigh University, April 2009.

Presented "Is Bigger Still Better?: The Decline of the Wage Premium at Large Firms," at Association of Private Enterprise Education meetings, April 2009.

Presented "The Growth of Participant Direction in Defined Contribution Pensions," at Trinity University, October 2008.

Presented "The Growth of Participant Direction in Defined Contribution Pensions," at Georgia State University, April 2008.

Presented "The Growth of Participant Direction in Defined Contribution Pensions," at Association of Private Enterprise Education meetings, April 2008.
Presented, "Improving Pension Coverage at Small Firms," at Hudson Institute, May 2006.

Presented, "Participant Direction in Defined Contribution Plans," at Society of Labor Economics meetings, May 2006.

Presented, "Participant Direction in Defined Contribution Plans," at Association of Private Enterprise Education meetings, April 2006.

Presented, "Participant Direction in Defined Contribution Plans," at University of Wisconsin-Milwaukee, April 2006.

Invited Panel Participant for Pepper Foundation and Center Symposium on pension reform, Washington, DC, February 2006.

Presented, "The Risk and Return of Pension Investments in Employer Stock," at West Virginia University, April 2005.

Presented, "The Risk and Return of Pension Investments in Employer Stock," at the University of Kentucky, November 2004.

Presented, "The Causes and Consequences of Company Stock Holdings in Pension Funds," at the Federal Reserve Bank of Atlanta, April 2004.

Presented, "The Causes and Consequences of Company Stock Holdings in Pension Funds," at the University of Oklahoma, February 2004.

Presented, "Tracking Union and Nonunion Wages in the U.S.: Can the Evidence be Reconciled?" at the Middlebury Annual Conference on Economic Issues, April 2002.

Presented, "How Will the Growth of DC and 401(k) Plans Affect Pension Income?" at the Miami University Center for Pension and Retirement Research Conference, June 2001.

Presented, "Benefits and Worker Productivity," Benefits for the Workplace of Tomorrow Conference, Wharton School, University of Pennsylvania, May 2001.

Participant, Innovations in Managing the Financial Risks of Retirement Conference, Wharton School, University of Pennsylvania, May 2000.

Presented "Using Hi-Tech in Large Lectures," at Association of Private Enterprise Education meetings, April 2000.

Presented "Employee Participation in 401(k) Plans," at University of Wisconsin-Milwaukee, October 1999.

Presented "Gender, Race, and Ethnicity in the Labor Market," as part of the Smith Chair course in Labor Economics at Brigham Young University, September 1999.

Presented, "The Decline in Pension Coverage Among Less Educated Workers," at the Florida State University Economics Department Seminar Series, 1996.

Presented, "Children's Effects on Women's Labor Market Attachment and Earnings" at the Conference on the Changes in Working Time in Canada and the United States, Canadian Employment Research Forum, 1996.

Presented, "Earnings, Rents, and Competition in the Airline Labor Market" at the Ohio State University Economics Department Seminar Series, 1996.

Presented, "Earnings, Rents, and Competition in the Airline Labor Market" at the Florida State University Economics Department Seminar Series, 1995.

Presented, "Employer Size and Labor Turnover: The Role of Pensions," at Syracuse University, 1995.

Presented, "Earnings, Rents, and Competition in the Airline Labor Market" while visiting scholar at the Federal Reserve Bank of Cleveland, 1995.

Presented, "Trends in Individual and Household Pension Coverage," at the Miami University Center for Pension and Retirement Research Conference, 1994.

Presented, "Racial Composition, Quality Sorting, and the Black-White Wage Gap" at the University of Wisconsin, Institute for Research on Poverty, Small Grants Workshop, 1993, with Barry Hirsch.

Presented, "Why Did Male Pension Coverage Decline in the 1980s?" at the Florida State University Economics Department Seminar Series, 1992.

Participant at National Bureau of Economic Research (NBER) Labor Studies meetings of the Summer Institute, 1992.

Presented, "Why Did Male Pension Coverage Decline in the 1980s?" at the Miami University Conference on Current Pension Policy Issues, 1992.

Organizer and participant at conference on "Contemporary Issues in Pension Economics," hosted by the Center for Pension and Retirement Research, Miami University, 1990.

Presented "The Effect of International Competition on Union and Nonunion Wages," at the University of Cincinnati Seminar Series, 1987.

Fiscal Note Summary

State and local governments estimate no direct costs or savings from the proposal, but operating costs could increase by an unknown annual amount that could be significant. State and local government tax revenue could change by an unknown annual amount ranging from a $1.7 million decrease to a $207 million increase depending on business decisions.

RE: Petition approval request from Richard Von Glahn regarding a proposed statutory amendment to Chapter 290, Version 12 (2018-207)

Dear Auditor Galloway:

Enclosed please find an initiative petition sample sheet for a proposal to amend the Revised Statutes of Missouri filed by Richard Von Glahn on April 3, 2017.

We are referring the enclosed petition sample sheet to you for the purposes of preparing a fiscal note and fiscal note summary as required by Section 116.332, RSMo. Section 116.175.2, RSMo requires the state auditor to forward the fiscal note and fiscal note summary to the attorney general within twenty days of receipt of the petition sample sheet.

Thank you for your immediate consideration of this request.

Sincerely,

John R. Ashcroft

Be it enacted by the people of the state of Missouri:

Sections 290.502 and 290.527 of the Revised Statutes of Missouri are amended and a new section to be known as section 290.529 is enacted to read as follows:

290.502. 1. Except as may be otherwise provided pursuant to sections 290.500 to 290.530, effective January 1, 2007, every employer shall pay to each employee wages at the rate of $6.50 per hour, or wages at the same rate or rates set under the provisions of federal law as the prevailing federal minimum wage applicable to those covered jobs in interstate commerce, whichever rate per hour is higher.

2. The minimum wage shall be increased or decreased on January 1, 2008, and on January 1 of successive years, by the increase or decrease in the cost of living. On September 30, 2007, and on each September 30 of each successive year, the director shall measure the increase or decrease in the cost of living by the percentage increase or decrease as of the preceding July over the level as of July of the immediately preceding year of the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) or successor index as published by the U.S. Department of Labor or its successor agency, with the amount of the minimum wage increase or decrease rounded to the nearest five cents.

3. Except as may be otherwise provided pursuant to sections 290.500 to 290.530, and notwithstanding subsection (1) of this section, effective January 1, 2019, every employer shall pay to each employee wages at the rate of not less than $8.50 per hour, or wages at the same rate or rates set under the provisions of federal law as the prevailing federal minimum wage applicable to those covered jobs in interstate commerce, whichever rate per hour is higher. Thereafter, the minimum wage established by this subsection shall be increased each year by $.70 per hour, effective January 1 of each of the next five years, until it reaches $12.00 per hour, effective January 1, 2024. Thereafter, the minimum wage established by this subsection shall be increased or decreased on January 1, 2025, and on January 1 of successive years, per the method set forth in subsection (2) of this section. If at any time the federal minimum wage rate is above or is thereafter increased above the minimum wage then in effect under this subsection, the minimum wage required by this subsection shall continue to be increased pursuant to this subsection (3), but the higher federal rate shall immediately become the minimum wage required by this subsection and shall be increased or decreased per the method set forth in subsection (2) for so long as it remains higher than the state minimum wage required and increased pursuant to this subsection.

4. For purposes of this section, the term "public employer" means an employer that is the state or a political subdivision of the state, including a department, agency, officer, bureau, division, board, commission, or instrumentality of the state, or a city, county, town, village, school district, or other political subdivision of the state. Subsection (3) of this section shall not apply to a public employer with respect to its employees. Any public employer that is subject to subsections (1) and (2) of this section shall continue to be subject to those subsections.

290.527. Any employer who pays any employee less wages than the wages to which the employee is entitled under or by virtue of sections 290.500 to 290.530 shall be liable to the employee affected for the full amount of the wage rate and an additional [equal] amount equal to twice the unpaid wages as liquidated damages, less any amount actually paid to the employee by the employer and for costs and such reasonable attorney fees as may be allowed by the court or jury. The employee may bring any legal action necessary to collect the claim. Any agreement between the employee and the employer to work for less than the wage rate shall be no defense to the action. All actions for the collection of any deficiency in wages shall be commenced within [two] three years of the accrual of the cause of action.

290.529. Except in the circumstances set forth in section 290.523, all the provisions of sections 290.500 to 290.530 are severable. If any provision, including any section, subsection, subdivision, paragraph, sentence, or clause, of sections 290.500 to 290.530, or the application thereof to any person or circumstance, is found by a court of competent jurisdiction to be invalid, unconstitutional, or unconstitutionally enacted, such decision shall not affect other provisions or applications of sections 290.500 to 290.530 that can be given effect without the invalid, unconstitutional, or unconstitutionally enacted provision or application.

MISSOURI STATE AUDITOR'S OFFICE
FISCAL NOTE (18-207)

Subject

Initiative petition from Richard Von Glahn regarding a proposed amendment to Chapter 290 of the Revised Statutes of Missouri. (Received April 4, 2017)

Date

April 24, 2017

Description

This proposal would amend Chapter 290 of the Revised Statutes of Missouri.

The amendment is to be voted on in November 2018.

Public comments and other input

The State Auditor's office requested input from the **Attorney General's office,** the **Department of Agriculture,** the **Department of Economic Development,** the **Department of Elementary and Secondary Education,** the **Department of Higher Education,** the **Department of Health and Senior Services,** the **Department of Insurance, Financial Institutions and Professional Registration,** the **Department of Mental Health,** the **Department of Natural Resources,** the **Department of Corrections,** the **Department of Labor and Industrial Relations,** the **Department of Revenue,** the **Department of Public Safety,** the **Department of Social Services,** the **Governor's office,** the **Missouri House of Representatives,** the **Department of Conservation,** the **Department of Transportation,** the **Office of Administration,** the **Office of State Courts Administrator,** the **Missouri Senate,** the **Secretary of State's office,** the **Office of the State Public Defender,** the **State Treasurer's office, Adair County, Boone County, Callaway County, Cass County, Clay County, Cole County, Greene County, Jackson County, Jasper County, St. Charles County, St. Louis County, Taney County,** the **City of Cape Girardeau,** the **City of Columbia,** the **City of Jefferson,** the **City of Joplin,** the **City of Kansas City,** the **City of Kirksville,** the **City of Mexico,** the **City of Raymore,** the **City of St. Joseph,** the **City of St. Louis,** the **City of Springfield,** the **City of Union,** the **City of Wentzville,** the **City of West Plains, Cape Girardeau 63 School District, Hannibal 60 School District, State Technical College of Missouri, Metropolitan Community College, University of Missouri, St. Louis Community College, University of Central Missouri, Harris-Stowe State University, Lincoln University, Missouri State University, Missouri Southern State University, Missouri Western State University, Northwest Missouri State University, Southeast Missouri State University, Truman State University, Kansas City Board of Police Commissioners, The Metropolitan Police Department - City of St. Louis,** the **St. Louis County Board of Elections,** the **Board of Election**

Commissioners City of St. Louis, the **Kansas City Board of Election Commissioners,** the **Platte County Board of Elections,** the **Jackson County Election Board,** and the **Clay County Board of Election Commissioners**.

Lara Granich and **Missouri Jobs with Justice Voter Action** provided information as proponents of the proposal to the State Auditor's office.

Robert Bonney, Chief Executive Officer of the Missouri Restaurant Association provided information as an opponent of the proposal to the State Auditor's office.

Assumptions

Officials from the **Attorney General's office** indicated they expect that, to the extent that the enactment of this proposal would result in increased litigation, they can absorb the costs associated with that increased litigation using existing resources. However, if the enactment of this proposal were to result in substantial additional litigation, they may request additional appropriations. They do not expect that the enactment of this proposal would result in any other increased costs to their office.

Officials from the **Department of Agriculture** indicated there is no fiscal impact to their department for this initiative petition.

Officials from the **Department of Economic Development** indicated no impact to their department.

Officials from the **Department of Higher Education** indicated this initiative petition would not have a fiscal impact on their department since public employers are exempt from the new provisions proposed.

Officials from the **Department of Health and Senior Services** indicated this proposal would have no direct fiscal impact on their department since government employees are exempt from its provisions. However, employees of certain entities that receive funding through the department's budget would be impacted, such as Medicaid Home and Community Based Services vendors/providers and Area Agencies on Aging.

Officials from the **Department of Insurance, Financial Institutions and Professional Registration** indicated this petition, if passed, will have no cost or savings to their department.

Officials from the **Department of Mental Health** indicated this proposal creates no direct obligations or requirements to their department that would result in a fiscal impact.

Officials from the **Department of Natural Resources** indicated their department defers to the Office of Administration to determine the fiscal impact of this proposal.

Officials from the **Department of Corrections** indicated they defer to the Office of Administration.

Officials from the **Department of Labor and Industrial Relations** indicated no fiscal impact on their department.

Officials from the **Department of Revenue** indicated this petition will have no fiscal impact on their department. Their department defers to the Office of Administration for a state impact.

Officials from the **Department of Public Safety - Office of the Director** indicated they will defer to the response provided for this initiative petition by the Office of Administration - Human Resources.

Officials from the **Department of Social Services** indicated no fiscal impact on their department. They defer to the Office of Administration.

Officials from the **Governor's office** indicated there should be no added cost or savings to their office.

Officials from the **Missouri House of Representatives** indicated no fiscal impact to their office.

Officials from the **Department of Conservation** indicated that no adverse fiscal impact to their department would be expected as a result of this proposal.

Officials from the **Department of Transportation** indicated unknown fiscal impact.

Officials from the **Office of Administration** indicated the proposal amends Sections 290.502 and 290.527 and adds Section 290.529, RSMo.

Section 290.502, RSMo, increases the minimum wage to $8.50 per hour, beginning January 1, 2019 and by another $0.70 per hour each year until it reaches $12.00 per hour beginning January 1, 2024. Thereafter, the minimum wage will be adjusted annually based on the increase/decrease in the cost of living.

The proposal exempts public employers from the requirements; therefore, there would be no cost to the State of Missouri.

Because no tax rates are affected, there is no direct impact on general and total state revenues. However, these proposals may have several indirect affects, which could impact revenue collections by an unknown amount, including but not limited to:

- Increased wages for certain employees. According to the US BLS, in 2015, Missouri had 57,000 hourly employees earning wages at or below the federal minimum wage;[1]
- Increased consumption by those employees;
- Lower overall employment (if employers choose to hold costs steady);

[1] http://www.bls.gov/opub/reports/minimum-wage/2015/home.htm

- Lower business investment (if employers' payrolls increase);
- Increased prices as firms pass–through labor costs.

This proposal should not impact their office.

Officials from the **Office of State Courts Administrator** indicated there is no fiscal impact on the courts.

Officials from the **Missouri Senate** indicated no fiscal impact on their office.

Officials from the **Secretary of State's office** indicated their office is required to pay for publishing in local newspapers the full text of each statewide ballot measure as directed by Article XII, Section 2(b) of the Missouri Constitution and Section 116.230-116.290, RSMo. Their office is provided with core funding to handle a certain amount of normal activity resulting from each year's legislative session. Funding for this item is adjusted each year depending upon the election cycle with $1.3 million historically appropriated in odd numbered fiscal years and $100,000 appropriated in even numbered fiscal years to meet these requirements. Through FY (fiscal year) 2013, the appropriation had historically been an estimated appropriation because the final cost is dependent upon the number of ballot measures approved by the General Assembly and the initiative petitions certified for the ballot. In FY 2015, the General Assembly changed the appropriation so that it was no longer an estimated appropriation. In FY 2017 their office was appropriated $2.6 million to publish the full text of the measures. In FY 2017, at the August and November elections, there were 6 statewide Constitutional Amendments or ballot propositions that cost $2.4 million to publish (an average of $400,000 per issue). Their office will continue to assume, for the purposes of this fiscal note, that it should have the full appropriation authority it needs to meet the publishing requirements. Because these requirements are mandatory, they reserve the right to request funding to meet the cost of their publishing requirements if the Governor and the General Assembly again change the amount or continue to not designate it as an estimated appropriation.

Officials from the **Office of the State Public Defender** indicated this initiative petition will not have any significant impact on their office.

Officials from the **State Treasurer's office** indicated they do not predict an immediate fiscal impact upon their office if Missouri's minimum wage rate were increased to $12.00 per hour. However, the potential future impact of applying cost of living increases and/or increases in the federal minimum wage to a Missouri minimum wage of $12.00 per hour, as called for elsewhere in Section 290.502, RSMo., is unknown.

Officials from **Greene County** indicated there are no estimated costs or savings to report from their county for this initiative petition.

Officials from the **City of Kansas City** indicated this petition may have a small negative fiscal impact on their city as a result of the increased hourly minimum wage being higher than the hourly rate paid some city employees.

Officials from the **City of Raymore** indicated no fiscal impact.

Officials from **University of Missouri** indicated they are not able to estimate any significant financial impact on their university.

Officials from **University of Central Missouri** indicated they estimate no fiscal impact since they are excluded under the public employer definition in section 4.

Officials from the **Missouri State University** indicated no fiscal impact.

Officials from **Missouri Southern State University** indicated they do not anticipate any fiscal impact from this initiative petition.

Officials from **Missouri Western State University** indicated the wording is unclear as to whether Colleges/Universities are included in this petition. In assuming they are included, they calculate the following significant fiscal impact to their university. The proposal will have a severe negative impact on the university. Payroll expenses will increase in 2019 approximately $275,800.00 and increase annually with an overall projected increase in 2024 of $1,635,000.00. The projections are based on a starting minimum wage of $8.50 per hour in 2019, increasing .70 an hour annually until 2024 when the proposed fiscal note would reach $12.00 an hour.

Officials from the **Kansas City Board of Election Commissioners** indicated no fiscal effect on their operations.

Officials from the **Platte County Board of Elections** indicated no fiscal impact.

Officials from the **Jackson County Election Board** indicated this petition does not have a fiscal impact on their office.

Lara Granich and **Missouri Jobs with Justice Voter Action** provided the following information as proponents of this initiative petition.

Re: Fiscal Impact Analysis of Minimum Wage Initiative Petitions

Summary of Proposed Minimum Wage Initiatives						
Version Number		**Initiative Summary**				
Version Number Used in This Impact Analysis	**Version Number Assigned by the Secretary of State**	**Minimum Wage Level**	**Matches the Federal Minimum Wage When It Is Higher**	**Stronger Penalty for Wage Violations**	**Tipped Worker Minimum Wage (as a % of Full Minimum Wage)**	**Allows Localities to Enact a Local Minimum Wage**
Version 13	2018 - 204	$12 by 2023 *(Start at $8.60 and $.85/year)*	Yes	Yes	No Change	No
Version 14	2018 - 205	$12 by 2023 *(Start at $8.60 and $.85/year)*	Yes	No	No Change	No
Version 15	2018 - 206	$12 by 2023 *(Start at $8.60 and $.85/year)*	No	No	No Change	No
Version 16	2018 - 207	$12 by 2024 *(Start at $8.50 and $.70/year)*	Yes	Yes	No Change	No
Version 17	2018 - 208	$12 by 2024 *(Start at $8.50 and $.70/year)*	Yes	No	No Change	No
Version 18	2018 - 209	$12 by 2024 *(Start at $8.50 and $.70/year)*	No	No	No Change	No

Version 19	2018 - 210	$13 by 2025 *(Start at $8.50 and $.75/year)*	Yes	Yes	No Change	No
Version 20	2018 - 211	$13 by 2025 *(Start at $8.50 and $.75/year)*	Yes	No	No Change	No
Version 21	2018 - 212	$13 by 2025 *(Start at $8.50 and $.75/year)*	No	No	No Change	No
Version 22	2018 - 213	$11 by 2022 (Start at $8.75 and $.75/year)	Yes	Yes	No Change	No
Version 23	2018 - 214	$11 by 2022 (Start at $8.75 and $.75/year)	Yes	No	No Change	No
Version 24	2018 - 215	$11 by 2022 (Start at $8.75 and $.75/year)	No	No	No Change	No
Version 25	2018 - 216	$11 by 2021 (Start at $9; $1/year)	Yes	Yes	No Change	No
Version 26	2018 - 200	$12 by 2022 (Start at $9; $1/year)	Yes	No	No Change	No
Version 27	2018 - 201	$13 by 2023 (Start at $9; $1/year)	Yes	No	No Change	No
Version 28	2018 - 202	$12 by 2024 (Start at $8.25; .75/year)	Yes	Yes	100%	No
Version 29	2018 - 203	$13 by 2025 (Start at $8.50; .75/year)	Yes	Yes	60%	No
Version 30	2018 - 196	$12 by 2022 (Start at $9; $1/year)	Yes	Yes	100%	Yes
Version 31	2018 - 197	$12 by 2022 (Start at $9; $1/year)	Yes	Yes	60%	Yes
Version 32	2018 - 198	$13 by 2023 (Start at 9; $1/year)	Yes	Yes	100%	Yes

Version 33	2018 - 199	$13 by 2023 (Start at $9; $1/year)	Yes	Yes	60%	Yes

This letter is from Lara Granich and Missouri Jobs with Justice Voter Action, proponents of the above-referenced Minimum Wage Initiative Petitions. Pursuant to RSMo. Section 116.175, we write to submit the following fiscal impact information to assist your office in its analysis of the fiscal impact of the above-mentioned seven proposed Minimum Wage Initiative Petitions.

Our analysis estimates the impact of the proposed Minimum Wage Initiative Petitions on state and local sales and personal income tax revenue in Missouri. We follow the process that has been used in the past to estimate the impact of minimum initiative petitions on state and local sales and personal income tax revenue, with some refinements. We also address certain claims that have been made by opponents of similar initiative petitions in the past.

As these petitions exclude public workers from the proposed minimum wage increases, we do not include in our analysis an estimate of the impact on state and local payroll costs of the proposed Minimum Wage Initiative Petitions.

I. Estimate of Number of Workers Affected Statewide and the Impact on Their Wages

Table 1. Summary of the Number of Affected Workers and Aggregate Wage Increases for Missouri in the Final Year of Minimum Wage Implementation.

Proposal	Year of Peak Minimum Wage (MW)	Proposed Peak MW	Tipped MW in Peak MW Year	Workers Affected by MW increase	Aggregate Annual Wage Increase in Nominal Dollars
13,14,15[a]	2023	$ 12.00	$ 6.00	835,350	$4,358,798,129
16,17,18[a]	2024	$ 12.00	$ 6.00	819,652	$4,209,438,048
19,20,21[a]	2025	$ 13.00	$ 6.50	900,788	$5,309,336,662
22,23,24[a]	2022	$ 11.00	$ 5.50	738,515	$3,347,138,756
25	2021	$ 11.00	$ 5.50	761,164	$3,469,534,559
26	2022	$ 12.00	$ 6.00	852,284	$4,510,285,824
27	2023	$ 13.00	$ 6.50	949,801	$5,667,065,534
28	2024	$ 12.00	$ 9.60	832,328	$4,288,614,460
29	2025	$ 13.00	$ 7.80	905,942	$5,332,471,496
30	2022	$ 12.00	$ 8.40	864,090	$4,558,317,729
31	2022	$ 12.00	$ 6.84	855,887	$4,523,341,931

32	2023	$ 13.00	$ 9.75	948,421	$5,745,051,956
33	2023	$ 13.00	$ 7.54	942,566	$5,685,951,766

Notes: Author's Analysis of American Community Survey (ACS) Data from 2014.
(a) Since these proposals only vary on non-economic factors, their economic and fiscal impacts are treated as equal for the purposes of this report.

Across the proposals analyzed, the total aggregate wage increase for workers in Missouri ranges from a low of $3.347 billion (Proposals 22-24) to a high of $5.745 billion under Proposal 32. While some proposals have the same final impact numbers, they have different impacts in the initial years (not listed) based on the relative pace of increases in earlier years. A full, year-by-year impact analysis is presented in Appendix Tables A1 through A13 below.

The wage impact of an increase in the minimum wage for the state of Missouri is calculated using the following procedure. The American Community Survey (ACS) Public Use Micro Sample for the most recent year available (2014) for the state of Missouri was downloaded from the US Census Bureau. The American Community Survey was chosen over the Current Population survey because the ACS has a significantly larger sample. We followed the method of Perry, Thomason, and Bernhardt (2016) for calculating an hourly wage rate from the ACS based on observed total annual wage income, typical hours worked each week and weeks worked per year. Since ACS income figures are clustered around whole-numbers, we smoothed the wage distribution by randomly adding or subtracting $0.25 from each wage figure.

Wage adjustments were made only for those individuals earning less than the proposed minimum wage, or proposed tipped minimum wage. We did not make additional adjustments for the "ripple effect" of minimum wage increases on workers earning slightly above the new threshold. Recent evidence suggests that workers earning up to 15 percent above of the minimum wage also receive small increases in response to a minimum wage increase. (See Wicks-Lim (2006) and Dube, Giuliano and Leonard (2015).) Thus, the estimated impacts listed above are likely to be smaller than the actual impact of increasing the minimum wage to the proposed level.

The proposed minimum wage increases exclude public employees. However, it was not practicable to exclude public employees from these calculations because the ACS does not have a published variable that allows for identification of public employees. Nonetheless, this inclusion of public employees should have only a minimal impact on our results, since their numbers are small and most already earn more than the proposed minimum wage increases.[1]

All wages from the 2014 survey were adjusted upward to account for inflation between the time of the survey and the time of measurement of the impact. Actual rates of inflation were used to adjust wages up to 2016. For all subsequent years between 2017 and 2028, baseline wages were adjusted using the projected annual average rate of change in the Consumer Price Index for Urban Workers (CPI-U) for the Midwest region. The 2015 and 2016 Missouri Minimum wage of $7.65 was adjusted by the same factor prior to measuring the impact of a change to the proposed minimum wage in 2019.

After these adjustments, the resulting hourly wage of all employees was compared to the proposed minimum wage. A total of twenty-one proposals were analyzed. For each proposal, we constructed a baseline wage scenario that used only basic wage changes from expected inflation rates to predict each ACS respondent's hourly wage rate in each year

[1] For Missouri's state employees, this can be validated by viewing the earnings of all state employees at: http://mapyourtaxes.mo.gov/MAP/Employees/. In larger counties and cities most all public employees already earn more than the highest proposed minimum wage. Smaller counties and towns may have some public employees who earn less than the highest proposed minimum.

between 2019 and 2028. We then constructed a counterfactual, or "proposed" wage distribution for each worker under all twenty-one minimum wage proposed scenarios. Since the minimum wage proposals offer nine different paths for raising the minimum wage for all non-tipped private sector workers, and different wage paths for tipped workers, we create separate minimum wage changes for tipped and non-tipped workers. Specifically, we used information on a worker's occupation and observed wage levels to separately identify tipped workers and assign them the proposed tipped minimum wage in each year, rather than the higher non-tipped minimum wage.[2]

If the proposed minimum wage was less than the inflation-adjusted hourly earnings of an employee, then no impact was calculated. If the proposed minimum wage was more than the hourly earnings for an employee, then the difference between the inflation-adjusted hourly earnings (i.e. baseline) and the proposed minimum wage was calculated. That difference was multiplied by the number of hours the employee worked in the year to calculate the annual impact for that employee. The result was then multiplied by a weighing factor for that employee in the population. The total impact for the state of Missouri was then summed across all affected workers to generate a total estimated increase in wage income in the state.

We do not include an estimate of job losses due to minimum wage changes. Existing research is clear that past minimum wage increases have had no measurable effect on aggregate employment levels. Larger minimum wage increases, such as those in Los Angeles, Seattle, and other jurisdictions, have not yet been studied to detect a clear disemployment effect. While it is possible that there may be some employment losses due to automation or other factors, this potential negative effect is likely offset by the positive potential job growth stemming from multiplier effects of the spending of minimum wage workers who receive substantial raises. There is substantial research to indicate that increases in the minimum wage have multiplier effects that increase the direct effects. For this reason and because of the likely increases in wages for individuals who earn above the proposed minimum wage rates, the impacts summarized in the table are considered conservative estimates relative to the total impact that would occur as a result of increasing the minimum wage to the proposed levels.

II. Economic Literature on the Impact of Minimum Wage Increases on Employment

Next, it is necessary to review the economic literature on the impact of minimum wage increases on employment. Opponents often claim that minimum wage increases may reduce employment in a state. If that is true, then those employment reductions would result in reductions in state income and sales tax revenue. However, review of the most credible recent empirical research on the minimum wage shows that increases in the minimum wage have had no discernible impact on employment. We thus conclude that it is not appropriate to project that the proposed initiative petitions would result in any detectable employment reduction, and resulting losses in income and sales tax revenue, or increases in unemployment-related costs to the state.

Economists have conducted hundreds of studies of the employment impact of the minimum wage. A recent meta-study – a formal statistical study of studies – by Doucouliagos and Stanley (2009) reviewed all the research conducted over the last three decades on the employment impact of minimum wage increases on teenagers in the United States. The researchers concluded that the minimum wage has little or no discernible effect on the employment prospects of low-wage workers. Their study followed a rigorous, peer-reviewed procedure and has the advantage of using a set of predetermined, objective criteria for weighing the validity of statistical findings across studies with different results.

[2] We defined tipped workers as those employed in occupations that typically receive a large share of income as tips. These occupations were 'Bartenders' (4040), 'Waiters and Waitresses', 'Food Servers, Non-restaurant' and 'Miscellaneous food preparation and serving related workers including dining room and cafeteria attendants and bartender helpers'.

(Source: Doucouliagos, Hristos and T. D. Stanley. 2009. "Publication Selection Bias in Minimum-Wage Research? A Meta-Regression Analysis." British Journal of Industrial Relations,vol. 47, no. 2, pp. 406-428.)

Recent theoretical and empirical research emphasizes several explanations for the consistently negligible employment impacts of moderate increases in the minimum wage. First, relative to total wage costs, minimum-wage increases are small. Second, employers and workers appear to respond to minimum-wage increases in many ways that reduce the direct cost to employers and substantially reduce or eliminate the need to cut employment.

Probably the most important economic response to a higher minimum wage is a reduction in turnover. At higher wages, employers fill vacancies faster and retain employees longer, boosting total employment and average productivity per worker while reducing direct and indirect training costs. Dube, Lester, and Reich (2012), for example, examined the effect of the minimum wage on labor turnover among teens and restaurant workers. They find "...striking evidence that separations, new hires, and turnover rates for teens and restaurant workers fall substantially following a minimum wage increase..." (p. 2). Their findings, using nationally representative data, are consistent with local case studies of the minimum wage and related "living wage" laws, including Dube, Naidu, and Reich's (2007) analysis of the San Francisco city-wide minimum wage; Fairris's (2005) study of local government contractors in Los Angeles; Howes (2005) on homecare workers in California; and Reich, Hall, and Jacobs (2005) on workers at the San Francisco airport.
(Sources: Dube, Arindrajit, T. William Lester, and Michael Reich. 2012. "Minimum Wage Shocks, Employment Flows and Labor Market Frictions." Berkeley, CA: Institute for Research on Labor and Employment. http://escholarship.org/uc/item/76p927ks; Dube, Arindrajit, Suresh Naidu, and Michael Reich. 2007. "The Economic Effects of a Citywide Minimum Wage." *Industrial and Labor Relations Review*, vol. 60, no. 4, pp. 522-543; Fairris, David. 2005. "The Impact of Living Wages on Employers: A Control Group Analysis of the Los Angeles Ordinance." *Industrial Relations*, vol. 44, no. 1, pp. 84-105; Howes, Candace. 2005. "Living Wages and the Retention of Home Care Workers in San Francisco." *Industrial Relations*, vol. 44, 5 no. 1, pp. 139-163; Reich, Michael, Peter Hall, and Ken Jacobs. 2005. "Living Wage Policies at the San Francisco Airport: Impacts on Workers and Businesses." *Industrial Relations*, vol. 44, no. 1, pp. 106-138.)

Employers also appear to respond to increases in the minimum wage by taking measures to boost productivity. Hirsch, Kaufman, and Zelenska's (2011) study of the impact of the federal minimum wage increase on 81 fast-food restaurants in Georgia and Alabama, for example, asked fast-food managers about the scope for efficiency improvements in response to the minimum-wage rise. About 90 percent of managers indicated that they planned to respond to the minimum wage increase with increased performance standards such as "requiring a better attendance and on-time record, faster and more proficient performance of job duties, taking on additional tasks, and faster termination of poor performers." (p. 27) Roughly the same share of managers said that they sought to "boost morale" by presenting the minimum wage increase as a "challenge to the store" and using this as a way "to energize employees to improve productivity." (pp. 28-29) Based on their interviews with store managers, the researchers concluded that a minimum wage increase may function as a "catalyst or shock that forces managers to step out of the daily routine and think about where cost savings can occur." (p. 29) (Source: Hirsch, Barry T., Bruce Kaufman, and Tetyana Zelenska, "Minimum Wage Channels of Adjustment." IZA Discussion Paper No. 6132. Germany: Institute for the Study of Labor. http://www2.gsu.edu/~ecobth/IZA_HKZ_MinWageCoA_dp6132.pdf)

A higher minimum wage may also motivate workers to work harder, independently of any actions by employers to increase productivity. According to "efficiency wage" theory, wages above the competitive-market rate may elicit greater work effort for several reasons. As Carl Shapiro and Joseph Stiglitz (1984) have argued, higher pay increases the cost to workers of losing their job, potentially inducing greater effort from workers in order to reduce their chances of

being fired. George Akerlof (1982), arguing from a more sociological point of view, has suggested that workers may see higher wages as a gift from employers, leading workers to reciprocate by working harder. (Sources: Shapiro, Carl and Joseph E. Stiglitz. 1984. "Equilibrium unemployment as a worker discipline device." *American Economic Review*, vol. 74, no. 3, pp. 433-444; Akerlof, George A. 1982. "Labor contracts as partial gift exchange." *Quarterly Journal of Economics*, vol. 97, no. 4, pp. 543-569.)

We therefore conclude that the proposed increase in the Missouri minimum wage would have no discernible impact on the employment levels of low-wage workers. Accordingly, we do not factor in reductions in employment, or any resulting decrease in sales tax or income tax. We also do not project any increased unemployment insurance costs – both because we do not project any resulting job losses, and, additionally, because unemployment insurance costs are paid for by employer premiums, and so are ultimately not a cost to the state.

For similar reasons, we do not believe that the proposed increase will have any significant adverse economic impact on small businesses or, by extension, on corporate income tax revenue. In fact, many small businesses already pay little if any corporate income tax.

III. State and Local Sales and Personal Income Tax Revenue Impact of Raising the Minimum Wage

Based on the wage impact figures calculated above, and the understanding that the minimum wage increases would be unlikely to result in offsetting job losses, we next calculate the impact of the projected wage increases on state and local sales and personal income tax revenue in Missouri. We project only the direct impact of the various minimum wage increase scenarios on such tax revenue. We do not attempt to project the additional impact through a GDP multiplier effect, or the potentially higher sales taxes generated if employers offset wage increases with higher prices (which would be taxable).

Personal Income Tax Revenue. In order to determine the projected increase in personal income tax revenues that would result directly from the increased wages, we had to develop assumptions about the effective income tax rates of the affected workers. We made the following assumptions with respect to the effective tax rate:

1. That 25% of affected workers can be claimed as a dependent on another party's Missouri income tax return and, as a result, would pay an effective tax rate of 6.0% on the increase in income;
2. That 50% of the affected workers would file as single taxpayers, would claim one deduction of $2,100, and would be entitled to a standard deduction of $5,800. This would result in an effective tax rate of 2.47%;
3. The remaining 25% would, we assumed, pay no additional Missouri income tax.

In light of these assumptions, the increased Missouri income tax revenue for each petition version can be calculated as follows: (total wage increase * 25% * 6.0%) + (total wage increase * 50% * 2.47%) + (total wage increase *25% * 0%).

Sales Tax Revenue. The state of Missouri imposes a 4.225% state sales tax on those items that are not exempt from the sales tax base. In addition, the average local sales tax rate is 2.95%. As a result, the average Missouri net sales tax rate is 7.175%. To estimate the share of income that is spent on goods and services that are subject to sales taxes, we used data from the 2015 Consumer Expenditure Survey (CES) for the US to estimate the share of income spent on categories that are subject to sales taxes. The CES summary tables list average spending per consumer across 20 different

categories (e.g. housing, transportation, food away from home) and we categorized each spending item as taxable or non-taxable and then calculated the share of spending that we taxable.[3] The resulting rate was 30.3 percent.

Based upon the above assumptions, and the total wage increase calculations for each version of the petition, we estimate that the increase in state income tax revenue resulting from the increased wages would be as follows:

Table 2. Summary of the Impact of Minimum Wage Increases on State and Local Sales and Income Taxes in Year of Full Minimum Wage Final Implementation.

Proposal	State Sales Tax (4.225%)	Local Sales Tax Revenue (2.95%)	Total Sales Tax Revenue Increase	Personal Income Tax Revenue	Total Sales and Personal Income Tax Revenue Increase
13,14,15[a]	$55,814,587	$38,971,132	$94,785,719	$119,213,129	$213,998,848
16,17,18[a]	$53,902,025	$37,635,734	$91,537,759	$115,128,131	$206,665,889
19,20,21[a]	$67,986,272	$47,469,704	$115,455,976	$145,210,358	$260,666,334
22,23,24[a]	$42,860,248	$29,926,090	$72,786,338	$91,544,245	$164,330,583
25	$44,427,531	$31,020,406	$75,447,937	$94,891,770	$170,339,707
26	$57,754,393	$40,325,553	$98,079,946	$123,356,317	$221,436,263
27	$72,567,004	$50,668,086	$123,235,090	$154,994,242	$278,229,333

Note: Author's Analysis of American Community Survey (ACS) data from 2014 and fiscal impact assumptions described above. All dollars are in nominal figures. (a) Since these proposals only vary on non-economic factors, their economic and fiscal impacts are treated as equal for the purposes of this report.

As described in Table 2 above, the fiscal impact of the proposed minimum wage increases varies based on the ultimate level of the minimum wage and the degree of tipped minimum wage phase out. The estimates of the total fiscal benefit range from $164 million to $282 million annually. Appendix tables A1 through A13 provide a year-by-year summary of the fiscal benefits.

[3] Specifically, the categories we assumed to be subject to state and local sales taxes are: food, household furnishings and equipment, vehicle purchases, gasoline and motor oil, entertainment, and all other expenditures. We assumed that 50 percent of the spending on the category "apparel and services" was taxable.

We hope that this information is useful to your office as your prepare your analyses of the petitions.

Respectfully submitted,

Lara Granich

Robert Bonney, Chief Executive Officer of the Missouri Restaurant Association provided the following information as an opponent of this initiative petition.

These corrections were subsequently provided to the submitted information

In the table on the bottom of page 7 and top of page 8, both averages for 2023 should be based on a 5 year phase-in. Accordingly, the figure on that table should state for 2023 ($12) Average Annual Unemployment Premiums Paid by State of $16,269,523.52.

The corresponding change on the table on page 12 would be to state, for 2023 ($12) Total Net Loss to State Government from Taxes and Unemployment Insurance of ($19,137,851.76).

Re: Initiative Petitions 2018-196 through 2018-216

Dear Mr. Halwes,

I write on behalf of Robert Bonney. Mr. Bonney is the Chief Executive Officer of the Missouri Restaurant Association. Please consider this letter and the accompanying studies as his fiscal impact statement as an opponent of Initiative Petitions 2018-196 through 2018-216 (the "Initiative Petitions"). If passed, any of these twenty-one initiatives would have a substantial negative impact on state and local governments, as well as Missouri small businesses. Those effects are both direct (as noted in Section 1) and secondary (as noted in Sections 2 through 5). The direct effects stem from higher labor and contracting costs that the state and its political subdivisions will incur, despite the Initiatives' effort to exclude government workers from the mandate.

The indirect effects will present a debate this Office has seen before. The proponents of the Initiative Petitions will once again rely on data sourced from political activist groups who claim increases in the minimum wage only serve to create new taxable income. The reality is that such groups approach this issue with political bias. Their analysis is one-sided because it completely ignores the fact that a wage increase does not "create" income from thin air; instead, it is an economic transfer from Missouri businesses to workers. Missouri businesses must pay the new wages "created" by the increases. Political activists' models fail to account, then, for two specific manifestations of the "debit" side of this transfer: reductions in employment, and the reduction in corporate income tax paid based upon business done in Missouri.

The failure to account for any employment effect at any proposed wage increase—even a drastic increase of the minimum wage to $13—is particularly puzzling, because Missouri's most populous areas border Illinois and Kansas. These states, respectively, have minimum wages of $8.25 and $7.25. Neither state adjusts the minimum wage for inflation. Likewise, the second effect—loss of corporate income tax revenues—is a mathematical certainty. Missouri businesses will be the source of the wage increase, which will lower their own taxable income. Assuming a one-to-one substitution of "created" wages for lost corporate income, the difference in the rates

at which these two types of income are taxed will result in a net decrease in state revenue. A dollar from increased wages is taxable by state government in Missouri at 6% or substantially less, whereas Missouri's corporate income tax rate is 6.25%.

On top of these two types of negative outcomes—lower employment and lower state tax revenues—there may be second-order effects to small businesses because they lack the access to capital to weather price fluctuations; they may not survive at all because they may not have the flexibility to simply cut employment, shifting their reliance to capital instead of labor resources, or suffering a decrease in production and revenue.

In short, much of the fiscal impact regarding the current crop of wage-related ballot measures is secondary: they cause transfers of wealth within (or out of) the state economy, and those transfers of wealth then create second-order effects for state and local governments via their collection of tax revenues and provision of welfare services for the unemployed or less-employed. Because these fiscal notes call for the Auditor operate in the area of secondary effects, it is critical that she treat both sides of the wealth transfer equally, and refrain from assessing only one half of the wage increase equation.

1. Direct Labor Cost Impact on State and Local Government Budgets

As noted to the State Auditor's Office previously by Dr. David Macpherson, a nationally prominent labor and economics expert, there are two ways to measure labor cost on state and local government budgets. First, one can use the information included in fiscal note responses from state and local government entities. It is important to note that these fiscal notes provide an incomplete and, therefore, too-low estimate of labor cost. Few state and local government entities respond to requests for a fiscal note response, and those that do respond often ignore important effects.

Second, data from the U.S. Census Bureau's Current Population Survey (CPS) can be used to calculate increased labor cost to state and local government entities in Missouri. To combat this time-honored analysis, and in a blatant attempt to manipulate the fiscal note process, the Initiative Petitions provide that they will raise the minimum wage for private workers, but not for workers employed by state or local governmental entities. No conceivable justification exists for solely raising the minimum wage on private businesses. Whatever the disparity between the value of total compensation at a private business and at a government employer, that disparity does not approach the wage adjustments at issue here, ranging from an inflation adjusted wage increase of 51.16% (($13-$8.60)/$8.60) in Initiative Petitions 2018-198 through 2018-201 to a wage increase of 30.17% (($11-$8.45)/$8.45) in Initiative Petitions 2018-213 through 2018-215.

Moreover, it is unreasonable to assume that on a sustained basis public employers, as defined in the Initiative Petitions, would be able to maintain dramatically lower wage levels than private businesses. Public employers would lose staff employable at higher rates in the private market, imposing substantial costs on government productivity. Using the method traditionally employed by labor economists and followed by the Auditor's office, one can calculate the annual

wage costs to state and local governmental entities, based on the annual wage cost for each state and local government worker in the ORG CPS, as detailed on page 6 of Dr. Macpherson's 2012 report, attached hereto as **Exhibit A**. Even if the auditor finds that a specific estimate of costs is not determinable, the auditor should note that state and local government "operating costs could increase by an unknown annual amount that could be significant," through the form of higher wage costs and higher contracting costs.

The proponents of the Initiative Petitions may argue that the Auditor should abandon any state and local cost estimates altogether. The proponents will argue that provisions they have inserted in the statute would mean that state and local government entities will not have to pay higher wages to their employees. Setting aside unjustifiable discrimination against private employers (and "public employees"), the provision is of uncertain legal effect and constitutionality. A "public employer," defined in the initiatives as "the state or a political subdivision of the state" still incurs substantial costs for wages of individuals that are "private employees," rather than "public employees." Cleaning services, food service, and other essential services often rely on state contracts with outside vendors. Sometimes, a contract rate may vary depending on the cost of labor. Even if the contract rate is fixed, it must be re-bid periodically, and that bidding process would take into account the new minimum wage. Plainly, the initiative would impose higher costs for state and local governments in contracting with any private entity and its employees. As a matter of law, it would be insufficient and unfair for the Auditor's fiscal note or summary to simply assume that these costs to state and local governmental entities do not exist.

2. Cost of Unemployment Benefits

a) The effect of inflation on Missouri's minimum wage

CPS–ORG data show that between 2007 and 2015, median nominal wages for adult (25–59 years old) workers in the U.S. grew by 1.68 percent a year. However, Missouri's minimum wage is currently adjusted using "the percentage increase or decrease as of the preceding July over the level as of July of the immediately preceding year of the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W)." Section 290.502, RSMo. Coincidentally (or perhaps not), the CPI-W, over the period from 2006 to 2016, also increased at an average rate of 1.68 percent a year.

Year	CPI-W	Observed inflation %
2006	199.2	
2007	203.7	0.022590361
2008	216.304	0.061875307
2009	210.526	-0.0267124

2010	213.898	0.016017024
2011	222.686	0.041085003
2012	225.568	0.01294199
2013	230.084	0.02002057
2014	234.525	0.019301646
2015	233.806	-0.00306577
2016	234.771	0.004127353

Using Missouri's current inflation-adjusted minimum wage rate and an assumed, constant 1.68 percent increase in the CPI-W, the minimum wage in Missouri will be as follows:

Year	Estimated Minimum Wage
2016	$7.65 (observed)
2017	$7.70 (observed)
2018	$7.85
2019	$8.00
2020	$8.15
2021	$8.30
2022	$8.45
2023	$8.60
2024	$8.75
2025	$8.90
2026	$9.05

b) Calculating job loss attributable to increased minimum wage

At least one outside economist, James Sherk, has already provided an estimate for job loss in Missouri based on a $15 minimum wage. Mr. Sherk calculated the effect of a $15 minimum wage implemented in 2021. Mr. Sherk's figures accounted for inflation by estimating the present value of $15.00 in 2021, rather than estimating an absolute figure for wage inflation in Missouri. Mr. Sherk calculated the present value of $15.00 in 2021 to be $13.57, per hour, based on wage inflation of 1.68 percent. Mr. Sherk evaluated the change from $7.65 per hour to $13.57 per hour (a 77.39% increase), exclusive of agricultural workers. Cumulatively, Mr. Sherk calculated this 77.39 percent increase in wages to reduce employment in the affected workforce by (0.7739*0.677) 52.39%.

Graves Garrett LLC

Mr. Sherk calculated that approximately 40.9% of Missouri's Wage and Salary Workers would be affected by such a $15 minimum wage. Mr. Sherk's calculations reveal that a $15 minimum wage in 2021 would be expected to reduce the number of full-time equivalent jobs in Missouri by approximately 218,000. Based on CPS–ORG data, these figures reveal an affected workforce of approximately 416,086 workers impacted by a $15 minimum wage increase in 2021.

However, in 2014, Dr. Macpherson found, using more conservative, national-level Congressional Budget Office data, that an increase to a $10.10 minimum wage, effective January 1, 2015, would eliminate about 15,700 jobs in Missouri. Dr. Macpherson analyzed the effect of a Missouri $10.10 minimum wage using a model suitable to a national analysis. This analysis predicted a loss of 15,700 Missouri jobs based on a wage increase from $7.50 in 2014 to $10.10 in 2015 (a 34.67% increase).

On the whole, the analysis by Mr. Sherk is more instructive here, since it is more recent, Missouri-specific, and anticipates larger wage changes contemplated by the Initiative Petitions. The most accurate way to determine the estimate of Workers Affected would be to analyze the CPS–ORG data. However, without such data readily available in the time constraints imposed by the fiscal note process, it is reasonable for estimation purposes to assume Mr. Sherk's figures are evenly distributed. Assuming that worker data follows an equal distribution, the Initiative Petitions would be expected to result in the following job losses:

Year of final prescribed wage increase	Wage without IP	Wage mandated by IP	Percentage increase	Percentage of affected workers who lose jobs (Percentage Increase x 0.677 Elasticity)	Estimate of Workers Affected	Estimate of Missouri Workers Unemployed by Initiative
2021	$8.30	$11.00	32.53%	22.02%	174,897	38,512
2022	$8.45	$11.00	30.18%	20.43%	162,262	33,150
2022	$8.45	$12.00	42.01%	28.44%	225,866	64,236
2023	$8.60	$12.00	39.53%	26.77%	212,532	56,895
2023	$8.60	$13.00	51.16%	34.64%	275,061	95,281
2024	$8.75	$12.00	37.14%	25.15%	199,683	50,220
2024	$8.75	$13.00	48.57%	32.88%	261,136	85,861
2025	$8.90	$13.00	46.07%	31.19%	247,695	77,256
2026	$9.05	$13.00	43.65%	29.55%	234,683	69,349

c) The best estimate for a price elasticity of demand for low-skilled labor is -0.677.

As noted by Mr. Sherk, starting wages of $15.00 per hour mean that full-time employee must create at least $38,700 a year in value for his or her employer (including wages, employer payroll taxes, and mandatory healthcare benefits). High minimum wages and mandatory benefit costs make it much harder for less-experienced and less-skilled workers to find jobs, particularly full-time work.

Recent labor economics scholarship has revealed that, accounting for publication bias, a state-specific elasticity of demand for less-skilled workers is, on average, approximately -0.677, though some estimates are even higher, around -1.0.[1] "[E]conomists have extensively studied how businesses respond to higher wages overall, not just minimum-wage increases. On average these studies find a 10 percent increase in labor costs causes firms to reduce employment of less-skilled workers by 6.8 percent in the long run."[2]

While these elasticity estimates are substantial in absolute terms, there is reason to believe that such estimates might still understate the impact of a Missouri state-specific effort to increase the minimum wage. This is so for several reasons. First, traditionally, labor economists view labor as a reasonably difficult input to substitute; however, Missouri businesses have readily available options. There are relatively few barriers to doing business in Missouri's border states, and businesses can easily relocate across a state line to take advantage of more favorable wage (and tax laws). Additionally, substantially raising the cost for Missouri labor, relative to labor sources in other states and other countries, is likely to force many manufacturing jobs in Missouri to disappear entirely. Automation is also a significant risk. The substitution of labor is becoming increasingly easy due to technology advancements and the "sharing" economy, where fewer individuals are "employees" covered by the minimum wage. Finally, a labor "price shock" may result in significant decreases in the demand for goods and services. People make behavioral changes to avoid higher costs, including eating out less often and generally decreasing consumption (or shifting their activities to consumption involving comparatively low amounts of labor) wherever possible.

[1] Sherk, James, "How $15-per-Hour Minimum Starting Wages Would Affect Each State," The Heritage Foundation, http://report.heritage.org/ib4601.

[2] "The coefficients on these estimates imply an elasticity of –0.677 for a study published in 2012 (the most recent year in their data) of long-run unconditional labor demand for low-skilled labor in the U.S., estimated using industry-level administrative panel data and a structural form model." "Estimates that do not account for publication bias tend to slow a long-run elasticity closer to –1.0. See, for example, George Borjas, Labor Economics, 6th ed. (Columbus, OH: McGraw-Hill, 2013), Chapter 4: 'The evidence also suggests that the estimates of the long-run labor demand elasticity cluster around –1, so the long-run labor demand curve is indeed more elastic than the short-run curve.' " Sherk, available at http://report.heritage.org/ib4601.

Graves Garrett LLC

d) Unemployment Benefit Costs

We derived an average unemployment payout by calculating the expected weekly unemployment benefit amount. Based on current data, the expected unemployment weekly benefit amount of a worker making $7.65 an hour, on a 40 hour workweek, is $159.12 per week, for 20 weeks.[3] The expected unemployment weekly benefit amount of a worker making $10.99 an hour is $228.59 per week. The expected unemployment weekly benefit amount of a worker making $11.99 an hour is $249.39 per week. The expected unemployment weekly benefit amount of a worker making $12.99 an hour is $270.19 per week. We assume that workers will seek unemployment insurance for the full twenty weeks authorized under Missouri law, because unemployment attributable to an increase in the minimum wage is structural. In this case, structural unemployment occurs because workers' job skills do not meet the established "price floor" of labor, rendering the worker's skills unmarketable. Assuming an even distribution of workers affected, the average unemployment benefit cost to the state for a worker is calculated as follows:

- For Initiative Petitions 2018-213 through 2018-216, [($159.12+$228.59)/2]*20 = $3,877.10
- For Initiative Petitions 2018-196, 2018-197, 2018-200, 2018-202, and 2018-204 through 209, [($159.12+$249.39)/2]*20 = $4,085.10
- For Initiative Petitions 2018-198, 2018-199, 2018-201, 2018-203, 2018-210 through 2018-212, [($159.12+$270.19)/2]*20 = $4,293.10

Consistent with Dr. Macpherson's 2012 report, it would be reasonable for the Auditor to assume that 35% of unemployed workers will receive unemployment benefits. Combining these numbers leads to the following estimates:

Year of final prescribed wage increase	Estimate of Missouri Workers Unemployed by Initiative	Estimated Unemployment Amount Per Worker	Estimated Total Unemployment Premiums Paid	Average Annual Unemployment Premiums Paid by State
2021 ($11)	38,512	3,877.10	$52,260,206.32	$17,420,068.77
2022 ($11)	33,150	3,877.10	$44,984,052.75	$11,246,013.19
2022 ($12)	64,236	4,085.10	$91,843,669.26	$22,960,917.32
2023 ($12)	56,895	4,085.10	$81,347,617.58	$20,336,904.39

[3] https://labor.mo.gov/DES/Claims/calculator. A 2015 law decreased the unemployment benefit period from 20 weeks to 13 weeks, but the Supreme Court of Missouri struck down the law in July 2016.

2023 ($13)	95,281	4,293.10	$143,167,801.39	$28,633,560.28
2024 ($12)	50,220	4,085.10	$71,803,802.70	$11,967,300.45
2024 ($13)	85,861	4,293.10	$129,013,450.69	$21,502,241.78
2025 ($13)	77,256	4,293.10	$116,083,706.76	$16,583,386.68
2026 ($13)	69,349	4,293.10	$104,202,767.17	$13,025,345.90

3. Impact on State Income Tax Revenue

The 2012 analysis prepared by Dr. Macpherson may also be used as a reference in calculating the effect of the initiative petitions on state income tax revenue. Here, again, it is reasonable to assume that our "affected workers" are evenly distributed, though precise CPS–ORG data would also provide a reliable estimate. Here, the increased income tax revenue is the additional income tax paid by workers whose wages increase. There is a loss of revenue, however, in the form of decreased income tax paid by workers whose wages decrease and businesses who absorb the increased cost of labor, rather than passing it along to customers.

For the purposes of these estimates, we assume that workers work 40 hours a week and 52 weeks per year:

Year of final prescribed wage increase	Estimate of Workers Affected	Estimate of Missouri Workers Unemployed by IP	Estimate of Missouri Workers with Increased Wages	Annual Increase in Wages Paid to Workers who get Wage Increase in Final Year	Annual Decrease in Wages Paid to Workers now Unemployed
2021 ($11)	174,897	38,512	136,385	$382,969,080.00	$108,141,696.00

2022 ($11)	162,262	33,150	129,112	$342,405,024.00	$87,913,800.00
2022 ($12)	225,866	64,236	161,630	$596,737,960.00	$237,159,312.00
2023 ($12)	212,532	56,895	155,637	$550,332,432.00	$201,180,720.00
2023 ($13)	275,061	95,281	179,780	$822,673,280.00	$436,005,856.00
2024 ($12)	199,683	50,220	149,463	$505,184,940.00	$169,743,600.00
2024 ($13)	261,136	85,861	175,275	$774,715,500.00	$379,505,620.00
2025 ($13)	247,695	77,256	170,439	$726,750,021.03	$329,419,584.00
2026 ($13)	234,683	69,349	165,334	$679,192,072.00	$284,885,692.00

These net wage increases will lead to corresponding increases in state income tax collections. Traditionally, it has been assumed that about 50% of affected workers will pay 6% income tax, while the other 50% of workers pay no state income tax. This assumption may be less accurate at the higher wage increases contemplated by the Initiative Petitions. Accordingly, figures are also displayed assuming that about 75% of affected workers will pay 6% income tax, while the other 25% of workers pay no state income tax.

Annual Net Increase in Wages Paid To Workers	Annual Income Tax Increase from Wage Increase (50% pay tax)	Annual Income Tax Increase from Wage Increase (75% pay tax)
$274,827,384.00	$8,244,821.52	$12,367,232.28
$254,491,224.00	$7,634,736.72	$11,452,105.08
$359,578,648.00	$10,787,359.44	$16,181,039.16
$349,151,712.00	$10,474,551.36	$15,711,827.04
$386,667,424.00	$11,600,022.72	$17,400,034.08
$335,441,340.00	$10,063,240.20	$15,094,860.30
$395,209,880.00	$11,856,296.40	$17,784,444.60
$397,330,437.03	$11,919,913.11	$17,879,869.67
$394,306,380.00	$11,829,191.40	$17,743,787.10

Graves Garrett LLC

Based on these figures, Missouri businesses must also decide whether to pass along any increase in wage costs (wages and mandatory payments).[4]

Year of final prescribed wage increase	Annual Cost to Business from Increased Wage	Annual Decreased Corporate Income Tax if cost is fully absorbed	Annual Decreased Corporate Income Tax if cost is 50% absorbed
2021 ($11)	$412,266,214.62	$25,766,638.41	$12,883,319.21
2022 ($11)	$368,599,008.34	$23,037,438.02	$11,518,719.01
2022 ($12)	$642,388,413.94	$40,149,275.87	$20,074,637.94
2023 ($12)	$592,432,863.05	$37,027,053.94	$18,513,526.97
2023 ($13)	$885,607,785.92	$55,350,486.62	$27,675,243.31
2024 ($12)	$543,831,587.91	$33,989,474.24	$16,994,737.12
2024 ($13)	$833,981,235.80	$52,123,827.23	$26,061,913.62
2025 ($13)	$782,346,397.64	$48,896,649.85	$24,448,324.93
2026 ($13)	$731,150,265.50	$45,696,891.59	$22,848,445.80

Assuming businesses absorb half of the cost of increased wages, and 75 percent of affected workers pay the new, higher taxes, the effect on state income tax collections is estimated to be:

Year of final prescribed wage increase	Annual Net Income Tax Revenue Loss
2021 ($11)	($516,086.93)
2022 ($11)	($66,613.93)
2022 ($12)	($3,893,598.78)
2023 ($12)	($2,801,699.93)
2023 ($13)	($10,275,209.23)
2024 ($12)	($1,899,876.82)
2024 ($13)	($8,277,469.02)
2025 ($13)	($6,568,455.26)
2026 ($13)	($5,104,658.70)

[4] A healthcare benefit cost estimate is not available based on the time limitations imposed by this fiscal note.

Graves Garrett LLC

4. Sales tax revenue gain or loss

Projecting any increase in sales tax revenue resulting from an increased minimum wage would require the auditor's office to conclude, based on data separate and apart from the sheer conjecture typically offered by political activist groups: (1) the net effect on consumer disposable income and (2) the percentage of a consumer's disposable income that is spent on goods subject to the sales tax, taking into consideration that the scope of Missouri's sales tax has been truncated by a voter-approved constitutional amendment from November 2016.

Typically, the Auditor's office multiplies the total increase in worker earnings (which should be adjusted for employment reductions) and multiplies the result by 25 percent, then multiplying that figure by the Missouri the population weighted combined average state and local sales tax in Missouri, 7.81%.[5] Based on this estimate, the population-weighted combined average local sales tax is 3.585%.

However, it would be deceptive to fail to account for sales tax losses from workers whose wages are eliminated or sales tax losses from reduced business profits (attributable to the higher wages paid), which will lower spending by business owners. The first figure is calculable by determining the total annual wages (adjusted for employment deductions) for all workers who lose jobs due to a minimum wage hike, multiplied by 25 percent. The second number is calculable by multiplying the total increase in worker earnings (multiplied by 1.0765 to account for Social Security and Medicare taxes) by approximately 15 percent.[6]

Year of final prescribed wage increase	Annual Net Increase in Wages Paid To Workers	New Wages Spent on Sales Tax Items	Annual Cost to Business from Increased Wage	Annual Business Income No Longer Included in Sales Tax Base (50% passed-through)
2021 ($11)	$274,827,384	$68,706,846	$412,266,214.62	($61,839,932)
2022 ($11)	$254,491,224	$63,622,806	$368,599,008.34	($55,289,851)
2022 ($12)	$359,578,648	$89,894,662	$642,388,413.94	($96,358,262)
2023 ($12)	$349,151,712	$87,287,928	$592,432,863.05	($88,864,929)

[5] http://taxfoundation.org/sites/taxfoundation.org/files/docs/LOST--2015.png.
[6] This estimate would also need to be adjusted to reflect certain employers' mandate under the Affordable Care Act to provide healthcare coverage and pay 60 percent of such coverage.

2023 ($13)	$386,667,424	$96,666,856	$885,607,785.92	($132,841,168)
2024 ($12)	$335,441,340	$83,860,335	$543,831,587.91	($81,574,738)
2024 ($13)	$395,209,880	$98,802,470	$833,981,235.75	($125,097,185)
2025 ($13)	$397,330,437	$99,332,609	$782,346,397.64	($117,351,960)
2026 ($13)	$394,306,380	$98,576,595	$731,150,265.51	($109,672,540)

Accordingly, the annual estimations of the effects on state and local revenue, and total state economic impact are as follows:

Year of final prescribed wage increase	Annual Net Income Tax Revenue Loss	Annual Net Effect on State Sales Tax	Total Annual Effect on State Tax Revenue	Total Net Loss to State Government from Taxes and Unemployment Insurance	Annual Net Effect on Local Sales Tax
2021 ($11)	($516,086.93)	$290,127.11	($225,959.82)	($17,646,028.59)	$246,178.86
2022 ($11)	($66,613.93)	$352,067.34	$285,453.41	($10,960,559.78)	$298,736.43
2022 ($12)	($3,893,598.78)	($273,087.10)	($4,166,685.88)	($27,127,603.19)	($231,720.06)
2023 ($12)	($2,801,699.93)	($66,628.31)	($2,868,328.24)	($23,205,232.64)	($56,535.50)
2023 ($13)	($10,275,209.23)	($1,528,364.68)	($11,803,573.91)	($40,437,134.18)	($1,296,849.08)
2024 ($12)	($1,899,876.82)	$96,566.47	($1,803,310.36)	($13,770,610.81)	$81,938.65
2024 ($13)	($8,277,469.02)	($1,110,951.72)	($9,388,420.74)	($30,890,662.52)	($942,665.55)
2025 ($13)	($6,136,139.31)	($761,317.55)	($6,897,456.87)	($23,480,843.55)	($645,993.71)
2026 ($13)	($5,104,658.70)	($468,803.67)	($5,573,462.37)	($18,598,808.26)	($397,789.62)

5. Damage to small business

Additionally, any proponent or opponent fiscal note submission is required, pursuant to Missouri law, to state the impact of the initiative on small businesses. According to analysis by the Employment Policies Institute, 40 percent of the minimum wage workforce is employed at businesses with fewer than 50 employees. [7] The impact on extra costs to small business may be more significant than even this 40% figure suggests. Small businesses are more easily shut down by input price increases than large businesses, which have greater access to capital to weather the

[7] https://www.epionline.org/oped/who-really-employs-minimum-wage-workers/

storm. Clearly, small businesses that do not shut down due to increases in the minimum wage will pay higher costs, estimated at about 40% of business' total increased costs, described above.

Conclusion

In conclusion, the State Auditor should attempt to quantify the increased cost to be borne by state and local government entities through increased contracting costs as a result of an increase to the minimum wage. This direct cost is outlined in Section 1.

Indirect costs are outlined in Sections 2 through 5, and show a net loss. Although such second-order effects more difficult to predict, a net loss is easily the most likely outcome. Significantly, this result is only obtainable if the Auditor reviews both the "credit" and "debit" sides of the transfer of wealth from businesses to workers. The Auditor should refrain from taking the proponents' likely invitation to consider and present only the "credit," side, and should attempt to provide a complete picture of all effects of a minimum wage increase, including the loss of revenue to state and local governments from individuals who lose employment. Only conveying (or quantifying) the potential for gain, without fairly conveying the likelihood of net loss, would be deceptive and unfair.

The State Auditor's previous 2018 fiscal notes are a good model. Each of the fiscal notes for the Initiative Petitions should follow the already-established format and state that:

> "[O]perating costs could increase by an unknown annual amount that could be significant. State and local government tax revenue could change by an unknown annual amount ranging from a $## million decrease to a $## million increase depending on business decisions."

Should you desire further detail or have any questions about this fiscal impact statement, please do not hesitate to contact me.

Sincerely,

Edward D. Greim

ABOUT THE MISSOURI RESTAURANT ASSOCIATION

With origins dating back to 1916, the Missouri Restaurant Association (MRA) is a statewide trade association representing over 1,500 member establishments. The association's membership is diverse, and includes full service, fast casual, and quick service restaurants, cafeterias, hotels, schools, institutions, contract feeders, and ancillary foodservice providers such as theme parks. The association has been successful in securing support from virtually every segment of the foodservice and hospitality industry.

MRA includes seven chapters as extensions of the parent organization, each with its own Officers, Board of Directors, and limited budget. The association is governed by a Board of Directors comprised of five Officers, 33 Directors, and each President of the seven affiliated chapters.

MRA is dedicated to serving the needs of the foodservice and hospitality industry, enhancing and improving its growth and development, assisting and educating its members in operating more effectively, improving the political and social environment in which the industry conducts business, for the benefit of its members, patrons, employees, and the well-being of the community.

David A. Macpherson is the E.M. Stevens Professor of Economics at Trinity University. He received undergraduate and doctoral degrees in economics from Pennsylvania State University.

Dr. Macpherson has published over 60 articles in leading economics and real estate journals including Review of Economics and Statistics, Industrial and Labor Relations Review, Journal of Labor Economics, Journal of Human Resources, and Journal of Real Estate Economics and Finance. His research has been funded by a variety of entities including the National Science Foundation, Florida Legislature, and the National Association of Realtors. He is co-author of the undergraduate labor economics text, Contemporary Labor Economics, as well as the principles of economics text, Economics: Private and Public Choice. He is included in Who's Who in Economics, Fourth Edition, which includes the 1,200 most frequently cited economists.

THE IMPACT OF A $10.10 MINIMUM WAGE ON JOBS AND TAXPAYER COSTS IN MISSOURI

June 2014

Economic Analysis by **Dr. David Macpherson**
Trinity University

Index

Executive Summary 4
Results 5
Technical Appendix 7

EXECUTIVE SUMMARY

Missouri's minimum wage of $7.50 is linked to rise in most years with the inflation rate. But some state legislators and labor unions would like to raise that figure even higher. For instance, a recent labor union-organized bus tour in the state promoted a $10.10 minimum wage in St. Louis.

Proponents have enthusiastically pointed to the benefits of the $10.10 policy. But there's been far less discussion of the costs involved with a $10.10-an-hour minimum wage—both the cost on employment, and the cost to taxpayers.

In this study, labor economist David Macpherson of Trinity University uses Census Bureau data to estimate the impact on Missouri's labor market and budget from raising the minimum wage to $10.10 an hour. He also provides separate results for the St. Louis metropolitan area.

Dr. Macpherson's employment estimates follow the methodology used by the nonpartisan Congressional Budget Office in its report earlier this year estimating the impact of a $10.10 minimum wage nationwide, which in turn relied on 60 different empirical studies to formulate its estimates.

Statewide, he finds that over 15,000 jobs would be lost at the $10.10 wage level—with 9,300 of those jobs being held by women. In the St. Louis metropolitan area, approximately 4,800 jobs would be lost from a $10.10 minimum wage.

The cost to taxpayers would be significant: There are approximately 40,000 state and local employees whose wages would be affected by the $10.10 increase in Missouri, for a combined cost to taxpayers of $87 million annually.

Raising wages is an admirable goal, but the evidence suggests that accomplishing this goal with a blunt wage mandate could do more harm than good.

RESULTS

The minimum wage is one of the most hotly-debated topics in the political world. Some legislators claim that a higher base wage will stimulate the economy; others claim that it will reduce jobs when affected employers can't offset the higher costs through higher prices.

Economists, who have studied the issue since the late 1940s, tend to take a skeptical view of minimum wage increases. Since the early 1990s, for instance, roughly 85 percent of the most credible research on the minimum wage points to job loss for less-skilled groups. The nonpartisan Congressional Budget Office (CBO), in an evaluation of President Obama's proposed $10.10 minimum wage increase, reviewed 60 different studies and concluded that the policy would eliminate 500,000 jobs if enacted.

The estimates that follow, of the employment impact of a higher minimum wage on Missouri's labor market, were performed by Dr. David Macpherson of Trinity University. Dr. Macpherson followed closely the methodology used by the CBO in its 2014 report. Dr. Macpherson also estimates the taxpayer costs of a higher minimum wage, as many state and local public employees will see their earnings increase when the minimum wage rises.

Dr. Macpherson's methodology is presented in detail in a technical appendix.

Estimated Employment Effects of a $10.10 Minimum Wage in Missouri

Statewide, Dr. Macpherson finds that increasing the minimum wage to $10.10 would eliminate over 15,000 jobs—approximately 60 percent of which are jobs held by women. The bulk of the job losses would be concentrated among individuals with a high school degree or less, and among people who work in the retail or leisure & hospitality industries.

(Note: Totals have slight discrepancies due to rounding.)

City-Specific Minimum Wage Employment Impacts

The city of St. Louis has been the subject of a number of protests calling for a higher minimum wage. Dr. Macpherson analyzed the employment impact of a $10.10 minimum wage in the St. Louis metropolitan area, providing breakouts by gender and education where the data permits. He estimates that the wage hike would eliminate approximately 5,000 jobs—just over half of which would be jobs held by women.

RESULTS CONTINUED

Missouri Taxpayer Costs of a $10.10 Minimum Wage

Dr. Macpherson estimates that approximately forty thousand state & local public employees would be affected by a minimum wage increase to $10.10 an hour. These additional wage costs translate to new costs for state and local taxpayers. Following the methodology described in detail in the technical appendix, Dr. Macpherson estimates both the straight wage cost of a $10.10 minimum wage, as well as the total compensation cost with Social Security, Medicare, workers compensation, and unemployment insurance included. Statewide, taxpayers would shoulder an additional $87 million in costs if the base wage was increased to $10.10 an hour and public employees were covered by the new wage.

Missouri Taxpayer Costs of a $10.10 Minimum Wage	
# of State & Local Workers	304,588
# Affected By $10.10 MW	40,103
Annual Wage Cost	$79,629,374
Annual Compensation Cost	$87,004,355

Note: Annual compensation costs include the cost of worker's compensation, FICA, and unemployment insurance benefits.

TECHNICAL APPENDIX

Estimating Employment Loss and the Cost to State and Local Government of an Increase in the Minimum Wage

Dr. David Macpherson
E.M. Stevens Professor of Economics
Trinity University

This paper describes how we estimate the employment loss and the cost to state and local governments of a proposed increase in the minimum wage effective on January 1, 2015.

Data and Sample

First, we use data from the Current Population Survey (CPS) Outgoing Rotation Groups (ORG) from January 2011 through December 2013. For each worker in the sample, we calculate their wage rate. We also adjust the wage rate to reflect a forecast of wages in 2015. This is done in two steps. First, based on legislation enacted as of April 2014, we estimate the minimum wage that would be in effect in January 2015 for each state and city that we consider. If a state or city has an indexed minimum wage, we increase the January 2014 state or city minimum wage by the Congressional Budget Office (CBO) inflation forecast for 2014 of 1.7%.

Since we use data from 2011 through 2013, we also follow the CBO approach for forecasting what the wage distribution would be in 2015. This is done in two steps. First, we adjust wages observed prior to 2013 to reflect 2013 minimum wage legislation. For example, if the minimum wage in a state was $7.25 in 2011 and grew to $8.00 by 2013, anyone who earned between $7.25 and $8.00 in 2011 would have their wage increased to $8.00. After wages are adjusted to 2013 levels, we assume that all wages grow by 2.9% in 2014. Using the resulting 2015 distribution of wages, we adjust for minimum wage legislation that would increase the minimum between 2013 and 2015. Anyone earning a wage between the 2013 and 2015 minimum wage is assigned a wage matching the 2015 minimum wage.

After generating the forecast 2015 distribution of wages reflecting wage growth and existing minimum wage legislation, we identify workers who would be affected by additional changes to the 2015 minimum wage as those with wages between the predicted minimum wage legislated for 2015 (or up to $.25 below it) and the proposed minimum.

To estimate the number of affected workers, we take two steps. First, for each state, we estimate the number of affected workers for 2013. Second, we adjust the weights in the 2011 and 2012 data so that the state-specific number of affected workers implied by the 2011 and 2012 data matches that for 2013. This adjustment is designed to correct for the changing economic climate as the economy recovers from the great recession and to generate estimates that are as close as possible to the most recent data (2013). After we adjust the 2011 and 2012 weights, we estimate the number of affected workers by summing their earnings weights and dividing the total by 36 (the number of months of data).

[1] Also, following CBO, anyone earning up to $.25 less than the 2011 minimum wage would have their wage increased by the amount that the minimum wage increased (i.e. a $7.00 wage would be increased to $7.75 in this example). This approach is used to adjust for the fact that many workers round their answers when asked about their wage.

TECHINCAL APPENDIX CONTINUED

Employment Loss

To estimate employment loss, for each affected worker we compute:

L = e *(Proposed Min Wage /Min Wage 2015 – 1)

where e is an assumed elasticity of employment with respect to changes in the minimum wage, Min Wage 2015 is the minimum wage currently legislated for 2015, and Proposed Min Wage is the minimum wage that is being proposed for 2015. Thus, for example, if a worker is projected to earn the federal minimum of $7.25 in 2015, the expected reduction in employment resulting from a $10.10 minimum wage in 2015 if e=.45 is .45*(10.10/7.25 – 1) = .18. That is, for every 100 workers currently earning the federal minimum, the expectation is that 18 would lose a job if the minimum wage elasticity is .45.

To estimate the aggregate employment loss in the economy, we use earnings weights to sum L across workers. We also follow the Congressional Budget Office (2014) and use an elasticity of 0.15 for non-teenagers and 0.45 for teenagers.

Cost to State and Local Government

We use the same data to estimate the cost to state and local government of a proposed minimum wage hike. We apply the same definition of affected workers described above and estimate the number of state and local government workers affected by a minimum wage hike. We do not, however, assume that there is any job loss for state and local workers as we do not have an appropriate elasticity estimate specific to state and local workers. To the extent that state or local governments reduce hours or employment in response tothe minimum wage hike, our estimate of the cost of the hike would be overstated.

To estimate the increase in annual payroll cost resulting from an increase in the minimum wage, we estimate the increase in annual cost for each worker as:

(Proposed Min Wage-Min Wage 2015)*weekly hours*52

We then multiply the increase in annual cost by the earnings weight for each worker and sum across workers. Since an increase in wages also requires increased employer contributions for Social Security, Medicare, workers' compensation and unemployment insurance, we apply an estimate of the payroll tax rate for these mandatory programs to calculate the additional cost for these programs.

For each state and city considered, we provide tables summarizing the number of affected workers, employment loss, and the distribution of employment loss by sex, education, race, age and industry. Given that we use three years of data, a rule of thumb for minimum sample size required to achieve a reasonably accurate estimate of the employment loss is to require at least 30,000 people be in the relevant category. For example, if there are fewer than 30,000 people projected to be in a particular industry category, the Bureau of Labor Statistics would not report the estimate due to a lack of reliability based on the variance of the estimate relative to its mean.

In addition to the estimate of employment loss, for each state or city considered, we estimate the number of state and local workers that would be affected by the minimum wage hike and the total annual cost to government in terms of wages and total compensation. As with the employment estimates, we advise caution in interpreting estimates that are based on fewer than 30,000 affected workers.

[3] Congressional Budget Office, "The Effects of a Minimum-Wage Increase on Employment and Family Income," February 2014.

[4] For workers paid by the hour the reported hourly wage was used. For workers who are not paid by the hour, we calculate the hourly wage by dividing usual weekly earnings by usual weekly hours. Overtime pay was calculated as time and one-half for hours above 40 hours for hourly workers.

[5] The assumed payroll tax for Medicare and Social Security is 7.65 percent. To estimate the payroll tax for workers' compensation and unemployment insurance, we use unpublished data from the 2010 Employer Cost of Employee Compensation database for state and local workers in the relevant region in 2010.

FISCAL ANALYSIS
OF
PROPOSED STATUTORY INITIATIVE PETITIONS 2012-084 AND 2012-085

Prepared for

Victor Allred versus Robin Carnahan and Thomas Schweich
Circuit Court of Cole County, Missouri

FISCAL ANALYSIS
OF
PROPOSED STATUTORY INITIATIVE PETITIONS 2012-084 AND 2012-085

I. Introduction

This report was undertaken at the request of counsel representing plaintiffs in the case of Victor Allred versus Robin Carnahan and Thomas Schweich. As part of the basis of the lawsuit, the plaintiffs allege that the fiscal note summaries for proposed statutory initiative petitions 2012-084 and 2012-085 are insufficient and unfair. I was asked by counsel to evaluate the fiscal impact of proposed statutory initiative petitions 2012-084 and 2012-085.

The results of my analysis indicate:

(1) labor costs to state and local government entities, based on state auditor fiscal notes, will rise by more than $1,352,182. A more inclusive estimate indicates that state and local government labor costs will increase by $16,003,712;

(2) unemployment benefit costs will rise by $4,397,510 during the first year of the minimum wage increase;

(3) individual income tax revenue will rise by at most $4,078,088;

(4) the loss in corporate income tax revenue could be as high as $9,243,105;

(5) state and local sales tax revenue will rise by at most $2,919,327;

(6) during the first year: state and local governments will incur increased costs of $20,401,222; the change in state and local government revenue will

range from -$2,245,690 to +$6,997,415; and the net state and local government fiscal impact will range from -$22,646,912 to -$13,403,807.

The report is organized as follows. My qualifications to prepare this report are contained in Section II. Section III describes the data and records I relied upon for this report. Section IV reviews the estimated fiscal impact of proposed statutory initiative petitions 2012-084 and 2012-085. A summary and my conclusions are provided in Section VI.

II. Qualifications

I am currently the E.M. Stevens Professor of Economics at Trinity University in San Antonio, Texas. Previously, I was employed by Florida State University as Director of the Pepper Institute on Aging and Public Policy and the Rod and Hope Brim Eminent Scholar in Economics. I have taught both undergraduate and graduate Econometrics (statistical analysis of economic data), and Labor Economics. I have published over 50 articles in peer-reviewed professional journals.

I am currently serving on the editorial board of the *Journal of Forensic Economics*, which is a peer-reviewed journal. I have also served as a reviewer or 'referee' for 24 peer-reviewed journals, including the *Journal of Human Resources, Journal of Labor Economics, Quarterly Journal of Economics,* and the *Review of Economics and Statistics*. Based upon these experiences, I am very familiar with the scholarly and professional research process and the concept of peer review.

I have prepared numerous analyses and reports that use statistical methods as applied to specific questions. I have been responsible for developing the techniques and approaches required for these analyses. I routinely use computers and statistical software packages to assist me in my analytical work. I have been qualified as an expert witness on statistical analysis of employment discrimination and economic damages in state courts in Florida and Georgia and Federal Courts, and I have given expert testimony. I have prepared analyses and offered testimony on behalf of both plaintiffs and defendants.

Details of my qualifications are reflected in my current resume and legal cases, attached as Appendix A to the report.

III. Data and Records

I reviewed the following materials in preparing this report.

- Plaintiff's Complaint
- Material cited in footnotes below.

IV. Fiscal Impact

A. Overview

The proposed statutory initiative petitions 2012-084 and 2012-085 contain many elements in common. Both initiatives would increase the Missouri minimum wage to $8.25 per hour, alter the exemption for retail and service firms, raise the cash wage of tipped workers from 50% to 60% of the minimum wage, and increase the statute of limitation from two to three year for underpayment claims.

The initiatives differ in their linkage to the federal minimum wage. Initiative petition 2012-084 requires that the state minimum wage be automatically increased to the

federal minimum wage if it is higher than the state minimum wage. Initiative petition 2012-085 does not have such a linkage. It only requires that workers be paid the higher of the state minimum wage or the federal minimum wage. The linkage to the federal minimum wage will cause the state minimum wage to be higher under initiative petition 2012-084 over time. This is because the state minimum wage, in contrast to the federal minimum wage, is adjusted for inflation as measured by the Consumer Price Index.

An increase in the minimum wage in Missouri will affect state and local government entities in two ways. First, it will directly increase the cost of labor to state and local government entities. This will occur due to the increase in wages of state and local government workers earning between the existing minimum wage of $7.25 and the new minimum wage of $8.25.[1] In addition, workers laid off due to the minimum wage increase can collect unemployment benefits. The state government will bear the cost of unemployment benefits of these workers for the first 20 weeks. Second, state and local government may gain increased revenue through higher income tax and sales taxes paid by workers affected by the minimum wage who remain employed. However, state and local government will suffer reduced tax revenue to the extent the higher wage cost lowers profits of businesses.

The following sections estimate the cost and revenue effects to state and local government entities of the proposed minimum wage increase.

[1] Information about the minimum wage in Missouri is available at http://www.labor.mo.gov/DLS/minimumwage/.

B. Direct Labor Cost Impact on State and Local Government Budgets

There are two possible ways to measure the direct labor cost on state and local government budgets. First, one can use the information included in the fiscal notes prepared by the State Auditor regarding the proposed initiatives. It is important to note that the fiscal notes provide an incomplete and thus too low estimate of the direct labor cost. The fiscal notes indicate that the Office of Administration's (OA) Division of Personnel reported that as of September 2011 there were 834 state workers who would be affected by an increase of the minimum wage to $8.25 and the "approximate annual cost" would be more than $540,000.

This OA estimate excludes seasonal workers such as State Fair employees, State Parks Employees, and tax season staff. The Division of Revenue noted its labor cost would rise by $40,000. The Division of Natural Resources stated they have over 500 workers who would be affected by the increase, but did not provide an estimate of the cost. The State Fair hired 745 workers that would be affected, but no cost estimate was provided.

Thus, the cost to state government, based on the fiscal notes, would be more than $580,000.

The fiscal notes also provide an incomplete and thus too low measure of the cost to local government and public educational institutions. Many cities and educational institutions did not respond to Office of Auditor's survey or provide an estimate of the cost of the higher minimum wage. The City of Columbia, City of Jefferson, City of

Joseph, Linn State Technical College, and Metropolitan Community College did provide such an estimate. The total cost to these five institutions is $772,182.

Based on the fiscal notes, the cost to state and local government entities of the increase in the minimum wage to $8.25 will be more than $1,352,182.

Second, data from the U.S. Census Bureau's Current Population Survey (CPS) can also be used to calculate the cost of the increased labor cost to state and local government entities in Missouri. Using the data from January 2010 to December 2011 Outgoing Rotation Group (ORG) CPS, I calculated that 17,089 state and local government workers would be affected by the minimum wage increase. I defined affected workers as those individuals earning between $7.00 and $8.24 per hour. Though the minimum wage was $7.25 per hour during this period, I also included those workers reporting earnings of $7.00 to $7.24 since some individuals may round their wage rate. I calculated the annual wage cost for each state and local government worker (i) in the ORG CPS as:

$$Annual\ Wage\ Cost_i = (\$8.25 - current\ wage_i) * weekly\ hours_i * 52.$$[2]

The average annual wage cost increase was $870. I summed the cost over each worker (i) to obtain the total wage cost to state and local government entities in Missouri of $14,866,430.

The increased wage cost is not the only labor cost to state and local government entities of the minimum wage increase. Employers are required to pay 7.65% of their wage costs in Social Security and Medicare taxes. Thus, the total labor cost of the minimum wage increase will be 1.0765 times $14,866,430 or $16,003,712.

---

[2] I assume that persons reporting an hourly wage rate between $7.00 and $7.24 are actually earning $7.25 per hour.

C. Unemployment Benefit Impact

The higher minimum wage will cause firms to reduce their level of employment.[3] As a result, the number of unemployed workers will increase. Thus, another important fiscal cost of the minimum wage increase is the cost of the unemployment insurance benefits for the workers laid off as a result of the minimum wage increase.

To calculate the cost to the unemployment benefits program, I first calculated the number of workers laid off. To do so, I calculated a probability of job loss for each affected Missouri worker (i) in the January 2010 to December 2011 ORG CPS:

$$Probability\ Job\ Loss_{\ i} = \frac{(\$8.25 - Current\ Wage_i)}{Current\ Wage_i} * elasticity_i.$$

I used the preferred employment elasticity (i.e., sensitivity of employment to wage changes) contained in Sabia and Burkhauser (2010), which was -0.6 for individuals aged 16 to 29 without a high school degree and -0.2 for all other individuals. The sole exception was for state and local government workers, where I assumed an elasticity of zero.[4] The sum across all affected workers yielded an estimated job loss of 5,745 jobs.

The next step was to calculate the weekly benefit for the average unemployed worker. Using the benefits calculator on the Missouri unemployment benefits web site and the wage income of average private-sector affected worker ($10,937), yields an average weekly benefit of $109.36[5]. The state of Missouri pays the first 20 weeks of benefits.[6] Thus, each eligible unemployed worker could receive a total of $2,187.20 in

---

[3] For a survey of research regarding the effect of the minimum wage on employment, see David Neumark and William L. Wascher, *Minimum Wages* (Cambridge, MA: MIT Press, 2008).
[4] Joseph J. Sabia and Richard V. Burkhauser, "Minimum Wages and Poverty: Will a $9.50 Federal Minimum Wage Really Help the Working Poor?" *Southern Economic Journal* (January 2010): 592-623.
[5] http://www.labor.mo.gov/DES/Claims/calculator.asp
[6] See http://www.labor.mo.gov/DES/Claims/

benefits paid for by the state of Missouri. These jobs are permanently eliminated and so it is appropriate to calculate the full amount of benefits for each worker.

Unemployment insurance, however, does not cover all unemployed workers. For example, it does not cover people who leave a job voluntarily, people looking for their first job, and re-entrants who previously left the labor force voluntarily. Furthermore, some individuals don't apply for benefits even though they are eligible. I assume that 35% of the unemployed workers will receive unemployment benefits based on analysis by Wenger (2001).[7]

The last step is to calculate the total cost to the Missouri unemployment benefits program. This done by multiplying the number of jobs lost (5,745) times the average benefit amount ($2,187.20) times the percent of unemployed individuals collecting benefits (35%). This calculation yields a figure of $4,397,510. This cost would be borne only during the first year of the minimum wage increase. The inflation adjustments in the minimum wage will also yield costs to the unemployment insurance program, but it is not possible to estimate the amount.

D. Impact on State Income Tax Revenue

The state of Missouri will gain increased revenue through higher income tax taxes paid by workers affected by the minimum wage who remain employed. However, it will

[7] Jeffery Wenger. "Divided We Fall: Deserving Workers Slip through America's Patchwork Unemployment Insurance System." *Economic Policy Institute*, 2001. Sabia and Burkhauser (2010) make the same assumption in their calculation of the amount of unemployment benefits generated by a minimum wage increase.

suffer reduced corporate income tax revenue to the extent the higher wage cost lowers profits of businesses.

To calculate the impact on individual income tax revenue, I again used data from January 2010 to December 2011 ORG CPS. I defined affected workers as those Missouri individuals earning between $7.00 and $8.24 per hour.[8] I used the following formula to estimate the change in income tax revenue:

$$\Delta Tax\ Revenue_i = (Tax_After_i - Tax_Before_i) - Prob_Job_Loss_i * Tax_Before_i,$$

where Tax_After_i is the income tax paid by worker i after the minimum wage increase. Tax_Before_i is the income tax paid by worker i after the minimum wage increase, and $Prob_Job_Loss_i$ is the probability of job loss for worker i. The first term shows the change in individual income tax revenue assuming no job loss and the second term shows the loss in tax revenue due to the employment loss caused by the minimum wage increase.

The income tax calculations were based on two assumptions.[9] First, the 50% percent of affected workers who were under the age 25 who were assumed to be dependents on another person's tax return. As a result, it was assumed that the affected workers' earnings were taxable at the maximum Missouri income tax rate of 6% both and after the minimum wage increase.[10] Second, all persons age 25 and older were assumed to be paying little or no income tax after exemptions and deductions. Thus, about 50% of the earnings increase will be taxed at a rate of 6%.

---

[8] I again assume that persons reporting an hourly wage rate between $7.00 and $7.24 are actually earning $7.25 per hour. The annual earnings level was calculated as the worker's wage rate times usual weekly hours worked times 52.

[9] The same assumptions are used in the State Auditor's fiscal notes for the initiatives.

[10] This assumption will overstate the revenue increase as 20% of affected workers under the age 25 are living by themselves and some of these individuals will not be a dependent on another person's tax return.

The tax calculations reveal an increase in income tax revenue increase to the state. Assuming no workers were laid off by the minimum wage increase, income tax revenue would rise by $6,043,534. However, the state will lose $1,965,446 in income tax revenue due to the lost earnings of private-sector workers no longer employed due to the minimum wage hike.[11] Thus, the net increase in individual income tax revenue is $4,078,088.

Businesses have three options to respond to the higher labor costs of a higher minimum wage. They can reduce their profits, raise prices, or lay off workers. Based on the 2010-2011 ORG CPS data, the minimum wage increase will raise private-sector labor costs by $192,620,900 if employment levels are not reduced. However, labor costs will be lowered by $55,240,790 due to the reduction in employment. Thus, labor costs will, on net, rise by $137,380,110. These increased labor costs may be either passed on to consumers through higher prices or reduced profits or more likely some combination of higher prices and reduced profits. Assuming that businesses absorbed all of the higher costs through reduced profits, the corporate income tax revenue would fall by the Missouri corporate income tax of 6.25% times the rise in labor costs of $137,380,110 * 1.0765 (to account for employer-paid Social Security and Medicare taxes) or $9,243,106.[12] Alternatively, if half of the higher labor costs were passed on to consumers, then corporate income tax revenue would fall by $4,621,553.

[11] The probability of job loss was calculated in the same manner as in the prior section.
[12] The corporate income tax for Missouri is available at: http://dor.mo.gov/business/corporate/

E. Impact on State and Local Sales Tax Revenue

To calculate the impact on state and local sales tax revenue the following approach was undertaken.[13] First, the total increase in worker earnings, adjusted for employment reductions, was calculated using the 2010-2011 ORG CPS. This figure was $152,246,540. Second, the increase in Missouri taxable sales was calculated as 25% of the earnings increase or $38,061,635. Third, the increase in sales tax revenue was calculated by multiplying the taxable sales change times the average state and local rate of 7.67% or $2,919,327.[14]

The higher minimum wage may decrease sales tax revenue to the extent that it reduces business profits, which will lower spending by business owners.

VI. Summary and Conclusions

I was asked by counsel to evaluate the fiscal impact of proposed statutory initiative petitions 2012-084 and 2012-085.

The results of my analysis indicate:

(1) labor costs to state and local government entities, based on state auditor fiscal notes, will rise by more than $1,352,182. A more inclusive estimate indicates that state and local government labor costs will increase by $16,003,712;

[13] The same general approach is used in the State Auditor's fiscal notes for the initiatives.
[14] The average rate comes from http://taxfoundation.org/news/show/27023.html

(2) unemployment benefit costs will rise by $4,397,510 during the first year of the minimum wage increase;

(3) individual income tax revenue will rise by at most $4,078,088;

(4) the loss in corporate income tax revenue could be as high as $9,243,105;

(5) state and local sales tax revenue will rise by at most $2,919,327;

(6) during the first year: state and local governments will incur increased costs of $20,401,222; the change in state and local government revenue will range from -$2,245,690 to +$6,997,415; and the net state and local government fiscal impact will range from -$22,646,912 to -$13,403,807.

University of South Carolina, 4/2000-11/2000, $10,000, "Minority Homeownership in South Carolina," with Stacy Sirmans.

Florida Department of Business and Professional Regulation, 3/1999-6/1999, $21,739, "Forecasting Housing Demand in Florida," with Stacy Sirmans.

University of South Carolina, 4/1999-11/1999, $10,000, "Forecasting Housing Demand in South Carolina," with Stacy Sirmans.

Florida State University, 6/1999-8/1999, $7,500, "Support for Preparing ECO 2000 as a Web-Based Course."

TIAA-CREF, 8/1998-8/1999, $23,000, "Determinants of Savings in Supplemental Pension Plans: A Case Study of Pension Choices in Higher Education," with Melissa Hardy and Larry Hazelrigg.

Florida Department of Business and Professional Regulation, 4/1998-6/1998, $16,638, "Forecasting Seniors' Demand for Housing in Florida," with Stacy Sirmans.

Florida Department of Business and Professional Regulation, 12/1997-6/1998, $18,472, "Housing Price Appreciation in Orlando and Tampa," with Stacy Sirmans.

Florida State University, 6/1998-8/1998, $7,500, "Support for Preparing ECO 2000 as a Web-Assisted Course."

Florida Department of Business and Professional Regulation, 3/1997-6/1997, $17,898, "Minority Homeownership in Florida," with Stacy Sirmans.

U.S. Department of Labor, Pension Welfare and Benefit Administration, 12/1996-8/1997, $20,000, "The Impact of Rising 401(k) Pension Coverage on Retirement Income," with William Even.

U.S. Department of Labor, Pension Welfare and Benefit Administration, 3/1996-6/1997, $15,000, "The Determinants of 401(k) Participation and Contribution Levels," with William Even.

Florida Department of Business and Professional Regulation, 4/1996-6/1996, $22,702, "Forecasting the Number of New Florida Real Estate Licensees," with Stacy Sirmans.

U.S. Department of Labor, Pension Welfare and Benefit Administration, 3/1995-6/1996, $15,000, "Explaining the Decline in Pension Coverage of Less Educated Workers," with William Even.

Florida State University COFRS Grant, 6/1994-8/1994, $8,000, "The Relative Compensation and Quality of Public and Private Sector Workers."

W.E. Upjohn Institute for Employment Research, 3/1994-12/1995, $35,000, "Pensions and Productivity," with Stuart Dorsey and Christopher Cornwell.

Florida Division of Workers' Compensation, 1/94-12/1995, $100,000, "Worker's Compensation Recipency in Union and Nonunion Workplaces," part of a service contract titled "Research Partnership with the Division of Workers' Compensation," co-investigator (one of several).

University of Wisconsin Institute for Research on Poverty Small Grant Program, 7/1993-6/1994, $15,000, "Racial Composition, Wages, and Quality Sorting," with Barry Hirsch.

U.S. Department of Labor, Pension Welfare and Benefit Administration, 7/1993-6/1993, $10,000, "Trends in Individual and Family Pension Coverage," with William Even.

U.S. Department of Labor, Pension Welfare and Benefit Administration, 6/1992-5/1993, $10,000, "The Pension Coverage of Young and Mature Workers," with William Even.

U.S. Department of Labor, Pension Welfare and Benefit Administration and American Society of Pension Actuaries, 6/1991-5/1992, $10,000, "A Conference on Current Pension Policy Issues," with William Even.

Miami University Faculty Research Grant, 6/1991-8/1991, $4,000, "Projected Growth in Retiree Health Insurance Liabilities."

Ohio Board of Regents Research Challenge Grant, 1/1990-12/1990, $4,980, "Proposal to Enhance the Data Library of the Center of Pension and Retirement Research," with William Even and Samuel Williamson.

Miami University Faculty Research Grant, 6/1990-8/1990, $4,000, "The Role of Firm Size in Pension Coverage and Options."

Miami University Faculty Research Grant, 6/1989-8/1989, $4,000, "Declining Unionism and the Gender Wage Gap," with William Even.

Participation in National Meetings

Panel Discussant, American Real Estate and Urban Economics Association/ASSA meetings, January 2008.

Presented, "Employee Turnover in the Long-Term Care Industry," at Academy Health Annual Research Meetings, June 2007.

Presented, "Participant Direction in Defined Contribution Pension Plans," at International Atlantic Economic Society meetings, October 2006.

Presented, "The Risk and Return of Pension Investments in Employer Stock," at International Atlantic Economic Society meetings, October 2005.

Presented, "Replacing Earnings After Termination: Evidence from the Displaced Worker Survey," at the Allied Social Science Association/National Association of Forensic Economics, January 2002.

Presented, "Labor Market Transitions of Older Workers," at the Allied Social Science Association/Society of Government Economists meetings, January 1999.

Presented, "Why has the Loss in Pension Coverage Accelerated Among Less Educated Workers?" at the American Economic Association Meetings, 1995.

Presented, "Wages and Gender Composition: Why Do Women's Jobs Pay Less?" at the American Economic Association Meetings, 1994, with Barry Hirsch.

Presented, "Pensions, Labor Turnover, and Employer Size" at the American Economic Association Meetings, 1993, with William Even.

Presented, "Why Did Male Pension Coverage Decline in the 1980s?" at the American Economic Association meetings, 1992, with William Even.

Participation in Regional Meetings

Presented "Unions and Pension Performance: The Role of Pension Design," at Southern Economics Association meetings, November 2009.

Panel member, "Recent Federal Reserve Policy: An Evaluation" at Southern Economics Association meetings, November 2009.

Discussant, "Topics in Health Economics," at Southern Economics Association meetings, November 2009.

Discussant, "Teacher Pay, Principals, and Schooling," at Southern Economics Association meetings, November 2009.

Presented "Is Bigger Still Better?: The Decline of the Wage Premium at Large Firms," at Western Economic Association meetings, July 2009.

Presented "Is Bigger Still Better?: The Decline of the Wage Premium at Large Firms," at Eastern Economic Association meetings, February 2009.

Panel Discussant at the Southern Economic Association meetings, November 2008.

Presented "Is Bigger Still Better?: The Decline of the Wage Premium at Large Firms," at Southern Economic Association meetings, November 2008.

Presented "The Growth of Participant Direction in Defined Contribution Pensions," at Western Economic Association meetings, July 2008.

Chair "Pensions and Retirement" Session at Southern Economic Association meetings, November 2007.

Presented "The Growth of Participant Direction in Defined Contribution Pensions," at Southern Economic Association meetings, November 2007.

Presented, "Participant Direction in Defined Contribution Pension Plans," at Southern Economic Association meetings, November 2006.

Panel Discussant, Southern Economic Association meetings, November 2005.

Presented, "Do Pensions Impede Phased Retirement?" at the Southern Economic Association meetings, November 2004.

Presented, "When Will the Gender Gap in Retirement Income Narrow?" at the Southern Economic Association meetings, November 2003.

Presented, "How Will the Growth of DC and 401(k) Plans Affect Pension Income?" at the Southern Economic Association meetings, November 2002.

Presented, "Racial Composition, Wages, and Quality Sorting," at the Southern Economic Association meetings, November 1999.

Presented, "Racial and Ethnic Differences in Pension Coverage and Benefit Levels," at the Southern Economic Association meetings, November 1998.

Presented, "Factors Influencing Participation and Contribution Levels in 401(k) Plans," at the Western Economics Association meetings, July 1998.

Presented, "Aging at Work: Employment Determination, Firm Strategies, and Public Policy in the United States," at the Western Economic Association meetings, July 1994.

Presented, "Why Did Male Pension Coverage Decline in the 1980s?" at the Western Economic Association meetings, July 1992.

Presented "Plant Size and the Decline of Unionism," at the Southern Economic Association meetings, 1989, with William Even.

Panel Discussant, Southern Economic Association meetings, November 1989.

Presented "The Labor Force Participation and Earnings Profiles of Married Female Immigrants," at the Southern Economic Association meetings, November 1988.

Presented "Pensions, Screening, and the Gender Wage Gap," at the Southern Economic Association meetings, November 1988.

Session Chair and Panel Discussant at the Southern Economic Association meetings, November 1988.

Participation in Invited Seminars, Conferences, and other Presentations

Presented, "Teaching Macroeconomics During Troubled Times," at Creative Ideas for Your Basic Economics Course Conference at Florida State University, February 2012.

Presented, "Participant Direction in Defined Contribution Pension Plans," at Pennsylvania State University, April 2010.

Presented, "The Parallels Between the Japanese Economic Crisis of the 1990s and the US Today" at Creative Ideas for Your Basic Economics Course Conference at Florida State University, February 2010.

Chair "Minimum Wage & EITC" Session at Society of Labor Economists meetings, May 2009.

Presented "Participant Direction in Defined Contribution Plans," at Lehigh University, April 2009.

Presented "Is Bigger Still Better?: The Decline of the Wage Premium at Large Firms," at Association of Private Enterprise Education meetings, April 2009.

Presented "The Growth of Participant Direction in Defined Contribution Pensions," at Trinity University, October 2008.

Presented "The Growth of Participant Direction in Defined Contribution Pensions," at Georgia State University, April 2008.

Presented "The Growth of Participant Direction in Defined Contribution Pensions," at Association of Private Enterprise Education meetings, April 2008.
Presented, "Improving Pension Coverage at Small Firms," at Hudson Institute, May 2006.

Presented, "Participant Direction in Defined Contribution Plans," at Society of Labor Economics meetings, May 2006.

Presented, "Participant Direction in Defined Contribution Plans," at Association of Private Enterprise Education meetings, April 2006.

Presented, "Participant Direction in Defined Contribution Plans," at University of Wisconsin-Milwaukee, April 2006.

Invited Panel Participant for Pepper Foundation and Center Symposium on pension reform, Washington, DC, February 2006.

Presented, "The Risk and Return of Pension Investments in Employer Stock," at West Virginia University, April 2005.

Presented, "The Risk and Return of Pension Investments in Employer Stock," at the University of Kentucky, November 2004.

Presented, "The Causes and Consequences of Company Stock Holdings in Pension Funds," at the Federal Reserve Bank of Atlanta, April 2004.

Presented, "The Causes and Consequences of Company Stock Holdings in Pension Funds," at the University of Oklahoma, February 2004.

Presented, "Tracking Union and Nonunion Wages in the U.S.: Can the Evidence be Reconciled?" at the Middlebury Annual Conference on Economic Issues, April 2002.

Presented, "How Will the Growth of DC and 401(k) Plans Affect Pension Income?" at the Miami University Center for Pension and Retirement Research Conference, June 2001.

Presented, "Benefits and Worker Productivity," Benefits for the Workplace of Tomorrow Conference, Wharton School, University of Pennsylvania, May 2001.

Participant, Innovations in Managing the Financial Risks of Retirement Conference, Wharton School, University of Pennsylvania, May 2000.

Presented "Using Hi-Tech in Large Lectures," at Association of Private Enterprise Education meetings, April 2000.

Presented "Employee Participation in 401(k) Plans," at University of Wisconsin-Milwaukee, October 1999.

Presented "Gender, Race, and Ethnicity in the Labor Market," as part of the Smith Chair course in Labor Economics at Brigham Young University, September 1999.

Presented, "The Decline in Pension Coverage Among Less Educated Workers," at the Florida State University Economics Department Seminar Series, 1996.

Presented, "Children's Effects on Women's Labor Market Attachment and Earnings" at the Conference on the Changes in Working Time in Canada and the United States, Canadian Employment Research Forum, 1996.

Presented, "Earnings, Rents, and Competition in the Airline Labor Market" at the Ohio State University Economics Department Seminar Series, 1996.

Presented, "Earnings, Rents, and Competition in the Airline Labor Market" at the Florida State University Economics Department Seminar Series, 1995.

Presented, "Employer Size and Labor Turnover: The Role of Pensions," at Syracuse University, 1995.

Presented, "Earnings, Rents, and Competition in the Airline Labor Market" while visiting scholar at the Federal Reserve Bank of Cleveland, 1995.

Presented, "Trends in Individual and Household Pension Coverage," at the Miami University Center for Pension and Retirement Research Conference, 1994.

Presented, "Racial Composition, Quality Sorting, and the Black-White Wage Gap" at the University of Wisconsin, Institute for Research on Poverty, Small Grants Workshop, 1993, with Barry Hirsch.

Presented, "Why Did Male Pension Coverage Decline in the 1980s?" at the Florida State University Economics Department Seminar Series, 1992.

Participant at National Bureau of Economic Research (NBER) Labor Studies meetings of the Summer Institute, 1992.

Presented, "Why Did Male Pension Coverage Decline in the 1980s?" at the Miami University Conference on Current Pension Policy Issues, 1992.

Organizer and participant at conference on "Contemporary Issues in Pension Economics," hosted by the Center for Pension and Retirement Research, Miami University, 1990.

Presented "The Effect of International Competition on Union and Nonunion Wages," at the University of Cincinnati Seminar Series, 1987.

Outside reviewer for Department of Economics, UNC-Greensboro, Georgia State University.

Promotion and tenure letters for candidates at Georgia State University, Kansas State University, Monmouth University, Ohio State University, University of Massachusetts, University of Southern California, and University of Wisconsin-Milwaukee.

Honors and Awards

Awarded sabbatical, Trinity, Fall 2011.

Nominated for FSU Award for Excellence in Undergraduate Teaching, Spring 2005.

Named Rod and Hope Brim Eminent Scholar in Economics, FSU, Fall 2004.

Research Fellow, Institute for the Study of Labor (IZA), Bonn, 2004-.

Who's Who in Economics, Fourth Edition, Mark Blaug and Howard Vane (eds), Edward Elgar Publishing, 2003, pp. 524 (selection criteria: one of the 1,200 most frequently cited economists in the years 1990-2000 using the Social Science Citation Index).

Awarded Abba Lerner named professorship, FSU, Spring 2000.

Awarded sabbatical, FSU, Spring 2000.

Received FSU Award for Excellence in Undergraduate Teaching, Spring 2000.

Received FSU Teaching Incentive Program Award, Fall 1995.

Nominated for FSU Award for Excellence in Undergraduate Teaching, Spring 1994.

Nominated for Outstanding Teaching Award, Associated Student Government, Miami University,1992.
Selected by the Miami University Sisters of Delta Gamma for a "Favorite Professor Award" in Fall 1990.

Honorary Member of Golden Key National Honor Society, Fall 1989.

Selected by the Sisters of Delta Gamma as "One of the twenty five most outstanding faculty members at Miami University" in Fall 1988.

Service

Vice President, Southern Economic Association, 2011-

Trinity University

Dick and Peggy Prassel Professor of Business Administration Search Committee, 2011
Faculty and Staff Compensation Committee, 2010-2011
Student Retention Committee, 2010

Florida State University

University and College Committees:

Member, GPC subcommittee for Marketing, Spring 2008.
Member, Graduate Policy Committee, Fall 2007-.
Chair, GPC subcommittee for Political Science, Fall 2006.
Member, Title IV Admissions Attendance Committee, Fall 2003-Spring 2004.
Member, College of Social Sciences Executive Committee, Fall 2003-.
Member, Ad Hoc Committee on COSS Technology, Spring 2003.
Member, Computing and Information Resource Committee, Fall 1999-.
Member, Academic and Policy Affairs Committee, Fall 1996-Spring 1998.

Economics Department Committees:

Member, Ad Hoc Committee on Economics 2000 Level Courses, Spring 1999.
Member, Undergraduate Economics Committee, Fall 1998-
Member, Economics Department Executive Committee, Fall 1994-Spring 1995, Fall 1996-Spring 1999, Fall 2000-.
Economics Department Library Representative, Fall 1993-.
Micro/Macroeconomics Seminar Coordinator, Fall 1993-Spring 1995, Fall 1998-Fall 1999, Fall 2001, Fall 2006-.

Comprehensive Examination Committees:

Member, Masters Comprehensive Exam Committee, Spring 1994.
Member, Ph.D. Labor Field Exam Committee, Fall 1992, Spring 1994, Fall 1994, Fall 1995, Fall 1996, Spring 1997, Spring 1998.
Chair, Masters Comprehensive Exam Committee, Fall 1994, Spring 1998.

Depositions and Trial Testimony: 2008 to 2012

1. Angela Speed and Adrian Speed vs. Hertz Corporation
   Atty: Dawn Pompey Whitehurst; Brevard County, Florida; gave deposition; wrongful injury; 2008; Case No: 05-2005-CA-065447

2. Patricia Morrison vs. Anthony Mork and Microspine Surgery
   Atty: Steven Andrews; Walton County, Florida; testified at trial; wrongful injury; 2008; Case No: 06000249CA.

3. James Tomaselli vs. State of Florida, Department of Corrections
   Atty: Gordon Leech; Martin County, Florida; gave deposition; wrongful termination; 2008; Case No: 01-554-CA.

4. Russell Martin, et al. v. City of Atlanta, et al.
   Atty: Andrew Coffman; U.S. District Court, Northern District of Georgia, Atlanta 5Division; gave deposition; racial discrimination; 2008; Case CA File No: 1:07-cv-00326-BBM

5. McCabe, et al. v. Harmon Fruit, et al.
   Atty: Larry Perry; Polk County, Florida; gave deposition; wrongful death; 2008; Case 53-2005-CA-003612-0000-00

6. Thomas Faulkner v. Michael Chertoff and Department of Homeland Security
   Atty: John Davis; U.S. District Court; Northern District of Florida; gave deposition; wrongful termination; 2009; Case 4:08CV341-SPM/WCS

7. Matthew Debord and Tabitha Debord vs. G & S Material Service et al.
   Atty: Hubert Brown; U.S. District Court; Northern District of Florida; gave deposition; wrongful injury; 2009; Case 3:07cv365-LAC/MD

8. Jessica Loveday vs. USA
   Atty: Anthony Caggiano; U.S. District Court; Northern District of Florida; gave deposition; wrongful injury; 2009; Case 1:08cv205/SPM

9. Julia Keyes vs. AIG
   Atty: Larry Perry; Jackson County, Florida; gave deposition; wrongful injury; 2009; Case 08706CA

10. Estate of Linda DePuy vs. Broeseker et al.
    Atty: Steve Andrews; Leon County, Florida; gave deposition; wrongful death; 2009; Case 2007 CA 2509

11. Oliver and Sollman vs. VSoft Inc.
    Atty: Larry Pankey; U.S. District Court, Northern District of Georgia, Atlanta Division; gave deposition; age discrimination; 2009; Case CA File No: 1:09-CV-0185

12. Yolanda Young vs. Covington and Burling, LLP
    Atty: Latif Damon; U.S. District Court for the District of Columbia; gave deposition; racial discrimination; 2009; Case CA File No: 1:09-CV-0464 RBW

13. Deborah Suboh vs. Mark Bergeson et al.
    Atty: Stephanie Wright and Charlotte Perrell; Georgia, Dekalb County; Case 07A77585-5, gave deposition; legal malpractice; 2010.

14. Rolando Simmons vs. Davis and Peterson
    Atty: Hubert Brown; Florida, Calhoun County; Case 2008-0150-CA, gave deposition and testified at trial; medical malpractice; 2010.

15. Lorie J. Marshall, et al. vs. H & R Block Tax Services, Inc.
    Atty: Allan Steyer; U.S, U.S. District Court
    Southern District of Illinois; Case No. 3:08-CV591-MJR; gave deposition; consumer damages; 2010.

16. Daren Davis vs. Joseph Austin and Terry Roberts Work Site
    Atty: Anthony Caggiano; Florida, Osceola County; gave deposition; wrongful injury; 2010; Case 2006 CA 002997 AN

17. David Darrow vs. Adventist Health Systems/Sunbelt Inc.
    Atty: Anthony Caggiano; Florida, Orange County; gave deposition; wrongful injury; 2010; Case 48-2009-CA-004897-0

18. Samuel Gonzalez vs. Gurdev Singh Nijjar et al.
    Atty: Ramon Rodriguez; Texas, El Paso County; gave deposition; wrongful injury; 2010; Case 2007-011

19. John Davis vs. Devereux Foundation.
    Atty: Thomas Brown; Florida, Brevard County; gave deposition; wrongful injury; 2010; Case 99-15992-CA-F

20. Al Kowalski vs. et al. YellowPages.Com, LLC
    Atty: Peter Pearlman; U.S. District Court Southern District of New York; Case No. 10-7318 (PGG); gave deposition; consumer damages; 2011.

21. Christina Glover and Jason Glover vs. Publix Super Markets
    Atty: Phelicia Steill; Florida, Leon; Case No. 08 CA 2695; gave deposition; wrongful injury; 2011.

22. Lissette Cartagena and William Cartagena vs. Bracero et al.
    Atty: Thomas Brown; Florida, Orange County; Case No. 07-CA-2645 DIV 34; gave deposition and testified at trial; wrongful injury; 2011.

23. Lillie Conyers and James Conyers vs. Werner Enterprises et al.
    Atty: Thomas Brown; Florida, Jackson County; Case No. 09-1174-CA; gave deposition; wrongful injury; 2011.

24. Shannon McCants vs. Wackenhut Corporation
    Atty: Dawn Pompey Whitehurst; Duval County, Florida; gave deposition and testified at trial; wrongful death; 2011; Case No: 16-2008-CA-014834

25. Christina Whipple versus R.E.S.A, Inc.
    Atty: Susan Haney; Bexar County, Texas; gave deposition; business damages; 2011; Case No.: 2009-CI-17074

26. Daniel Plouffe, et al. versus General Motors, LLC
    Atty: Michael Pitt; Wayne County, Michigan; gave deposition; age discrimination; 2012; Case No.: Case No. 11-007645-CL

27. Johnny Cash versus State Farm
    Atty: Steven Andrews; Leon County, Florida; testified at trial; wrongful injury; 2012; Case No.: Case No. 10-CA-2429

Fiscal Note Summary

State and local governments estimate no direct costs or savings from the proposal, but operating costs could increase by an unknown annual amount that could be significant. State and local government tax revenue could change by an unknown annual amount ranging from a $1.7 million decrease to a $207 million increase depending on business decisions.

STATE AUDITORS OFFICE

The Honorable Nicole Galloway
State Auditor
State Capitol Building
Jefferson City, MO 65101

RE: Petition approval request from Richard Von Glahn regarding a proposed statutory amendment to Chapter 290, Version 11 (2018-206)

Dear Auditor Galloway:

Enclosed please find an initiative petition sample sheet for a proposal to amend the Revised Statutes of Missouri filed by Richard Von Glahn on April 3, 2017.

We are referring the enclosed petition sample sheet to you for the purposes of preparing a fiscal note and fiscal note summary as required by Section 116.332, RSMo. Section 116.175.2, RSMo requires the state auditor to forward the fiscal note and fiscal note summary to the attorney general within twenty days of receipt of the petition sample sheet.

Thank you for your immediate consideration of this request.

Sincerely,

John R. Ashcroft

Be it enacted by the people of the state of Missouri:

Section 290.502 of the Revised Statutes of Missouri is amended and a new section to be known as section 290.529 is enacted to read as follows:

290.502. 1. Except as may be otherwise provided pursuant to sections 290.500 to 290.530, effective January 1, 2007, every employer shall pay to each employee wages at the rate of $6.50 per hour, or wages at the same rate or rates set under the provisions of federal law as the prevailing federal minimum wage applicable to those covered jobs in interstate commerce, whichever rate per hour is higher.

2. The minimum wage shall be increased or decreased on January 1, 2008, and on January 1 of successive years, by the increase or decrease in the cost of living. On September 30, 2007, and on each September 30 of each successive year, the director shall measure the increase or decrease in the cost of living by the percentage increase or decrease as of the preceding July over the level as of July of the immediately preceding year of the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) or successor index as published by the U.S. Department of Labor or its successor agency, with the amount of the minimum wage increase or decrease rounded to the nearest five cents.

3. Except as may be otherwise provided pursuant to sections 290.500 to 290.530, and notwithstanding subsection (1) of this section, effective January 1, 2019, every employer shall pay to each employee wages at the rate of not less than $8.60 per hour, or wages at the same rate or rates set under the provisions of federal law as the prevailing federal minimum wage applicable to those covered jobs in interstate commerce, whichever rate per hour is higher. Thereafter, the minimum wage established by this subsection shall be increased each year by $.85 per hour, effective January 1 of each of the next four years, until it reaches $12.00 per hour, effective January 1, 2023. Thereafter, the minimum wage established by this subsection shall be increased or decreased on January 1, 2024, and on January 1 of successive years, per the method set forth in subsection (2) of this section.

4. For purposes of this section, the term "public employer" means an employer that is the state or a political subdivision of the state, including a department, agency, officer, bureau, division, board, commission, or instrumentality of the state, or a city, county, town, village, school district, or other political subdivision of the state. Subsection (3) of this section shall not apply to a public employer with respect to its employees. Any public employer that is subject to subsections (1) and (2) of this section shall continue to be subject to those subsections.

290.529. Except in the circumstances set forth in section 290.523, all the provisions of sections 290.500 to 290.530 are severable. If any provision, including any section, subsection, subdivision, paragraph, sentence, or clause, of sections 290.500 to 290.530, or the application thereof to any person or circumstance, is found by a court of competent jurisdiction to be invalid, unconstitutional, or unconstitutionally enacted, such decision shall not affect other provisions or applications of sections 290.500 to 290.530 that can be given effect without the invalid, unconstitutional, or unconstitutionally enacted provision or application.

MISSOURI STATE AUDITOR'S OFFICE
FISCAL NOTE (18-206)

Subject

Initiative petition from Richard Von Glahn regarding a proposed amendment to Chapter 290 of the Revised Statutes of Missouri. (Received April 4, 2017)

Date

April 24, 2017

Description

This proposal would amend Chapter 290 of the Revised Statutes of Missouri.

The amendment is to be voted on in November 2018.

Public comments and other input

The State Auditor's office requested input from the **Attorney General's office,** the **Department of Agriculture,** the **Department of Economic Development,** the **Department of Elementary and Secondary Education,** the **Department of Higher Education,** the **Department of Health and Senior Services,** the **Department of Insurance, Financial Institutions and Professional Registration,** the **Department of Mental Health,** the **Department of Natural Resources,** the **Department of Corrections,** the **Department of Labor and Industrial Relations,** the **Department of Revenue,** the **Department of Public Safety,** the **Department of Social Services,** the **Governor's office,** the **Missouri House of Representatives,** the **Department of Conservation,** the **Department of Transportation,** the **Office of Administration,** the **Office of State Courts Administrator,** the **Missouri Senate,** the **Secretary of State's office,** the **Office of the State Public Defender,** the **State Treasurer's office, Adair County, Boone County, Callaway County, Cass County, Clay County, Cole County, Greene County, Jackson County, Jasper County, St. Charles County, St. Louis County, Taney County,** the **City of Cape Girardeau,** the **City of Columbia,** the **City of Jefferson,** the **City of Joplin,** the **City of Kansas City,** the **City of Kirksville,** the **City of Mexico,** the **City of Raymore,** the **City of St. Joseph,** the **City of St. Louis,** the **City of Springfield,** the **City of Union,** the **City of Wentzville,** the **City of West Plains, Cape Girardeau 63 School District, Hannibal 60 School District, State Technical College of Missouri, Metropolitan Community College, University of Missouri, St. Louis Community College, University of Central Missouri, Harris-Stowe State University, Lincoln University, Missouri State University, Missouri Southern State University, Missouri Western State University, Northwest Missouri State University, Southeast Missouri State University, Truman State University, Kansas City Board of Police Commissioners, The Metropolitan Police Department - City of St. Louis,** the **St. Louis County Board of Elections,** the **Board of Election**

Commissioners City of St. Louis, the **Kansas City Board of Election Commissioners,** the **Platte County Board of Elections,** the **Jackson County Election Board,** and the **Clay County Board of Election Commissioners**.

Lara Granich and **Missouri Jobs with Justice Voter Action** provided information as proponents of the proposal to the State Auditor's office.

Robert Bonney, Chief Executive Officer of the Missouri Restaurant Association provided information as an opponent of the proposal to the State Auditor's office.

Assumptions

Officials from the **Attorney General's office** indicated they expect that, to the extent that the enactment of this proposal would result in increased litigation, they can absorb the costs associated with that increased litigation using existing resources. However, if the enactment of this proposal were to result in substantial additional litigation, they may request additional appropriations. They do not expect that the enactment of this proposal would result in any other increased costs to their office.

Officials from the **Department of Agriculture** indicated there is no fiscal impact to their department for this initiative petition.

Officials from the **Department of Economic Development** indicated no impact to their department.

Officials from the **Department of Higher Education** indicated this initiative petition would not have a fiscal impact on their department since public employers are exempt from the new provisions proposed.

Officials from the **Department of Health and Senior Services** indicated this proposal would have no direct fiscal impact on their department since government employees are exempt from its provisions. However, employees of certain entities that receive funding through the department's budget would be impacted, such as Medicaid Home and Community Based Services vendors/providers and Area Agencies on Aging.

Officials from the **Department of Insurance, Financial Institutions and Professional Registration** indicated this petition, if passed, will have no cost or savings to their department.

Officials from the **Department of Mental Health** indicated this proposal creates no direct obligations or requirements to their department that would result in a fiscal impact.

Officials from the **Department of Natural Resources** indicated their department defers to the Office of Administration to determine the fiscal impact of this proposal.

Officials from the **Department of Corrections** indicated they defer to the Office of Administration.

Officials from the **Department of Labor and Industrial Relations** indicated no fiscal impact on their department.

Officials from the **Department of Revenue** indicated this petition will have no fiscal impact on their department. Their department defers to the Office of Administration for a state impact.

Officials from the **Department of Public Safety - Office of the Director** indicated they will defer to the response provided for this initiative petition by the Office of Administration - Human Resources.

Officials from the **Department of Social Services** indicated no fiscal impact on their department. They defer to the Office of Administration.

Officials from the **Governor's office** indicated there should be no added cost or savings to their office.

Officials from the **Missouri House of Representatives** indicated no fiscal impact to their office.

Officials from the **Department of Conservation** indicated that no adverse fiscal impact to their department would be expected as a result of this proposal.

Officials from the **Department of Transportation** indicated unknown fiscal impact.

Officials from the **Office of Administration** indicated the proposal amends Section 290.502 and adds Section 290.529, RSMo.

Section 290.502, RSMo, increases the minimum wage to $8.60 per hour, beginning January 1, 2019 and by another $0.85 per hour each year until it reaches $12.00 per hour beginning January 1, 2023. Thereafter, the minimum wage will be adjusted annually based on the increase/decrease in the cost of living.

The proposal exempts public employers from the requirements; therefore, there would be no cost to the State of Missouri.

Because no tax rates are affected, there is no direct impact on general and total state revenues. However, these proposals may have several indirect affects, which could impact revenue collections by an unknown amount, including but not limited to:

- Increased wages for certain employees. According to the US BLS, in 2015, Missouri had 57,000 hourly employees earning wages at or below the federal minimum wage;[1]
- Increased consumption by those employees;
- Lower overall employment (if employers choose to hold costs steady);

[1] http://www.bls.gov/opub/reports/minimum-wage/2015/home.htm

- Lower business investment (if employers' payrolls increase);
- Increased prices as firms pass–through labor costs.

This proposal should not impact their office.

Officials from the **Office of State Courts Administrator** indicated there is no fiscal impact on the courts.

Officials from the **Missouri Senate** indicated no fiscal impact on their office.

Officials from the **Secretary of State's office** indicated their office is required to pay for publishing in local newspapers the full text of each statewide ballot measure as directed by Article XII, Section 2(b) of the Missouri Constitution and Section 116.230-116.290, RSMo. Their office is provided with core funding to handle a certain amount of normal activity resulting from each year's legislative session. Funding for this item is adjusted each year depending upon the election cycle with $1.3 million historically appropriated in odd numbered fiscal years and $100,000 appropriated in even numbered fiscal years to meet these requirements. Through FY (fiscal year) 2013, the appropriation had historically been an estimated appropriation because the final cost is dependent upon the number of ballot measures approved by the General Assembly and the initiative petitions certified for the ballot. In FY 2015, the General Assembly changed the appropriation so that it was no longer an estimated appropriation. In FY 2017 their office was appropriated $2.6 million to publish the full text of the measures. In FY 2017, at the August and November elections, there were 6 statewide Constitutional Amendments or ballot propositions that cost $2.4 million to publish (an average of $400,000 per issue). Their office will continue to assume, for the purposes of this fiscal note, that it should have the full appropriation authority it needs to meet the publishing requirements. Because these requirements are mandatory, they reserve the right to request funding to meet the cost of their publishing requirements if the Governor and the General Assembly again change the amount or continue to not designate it as an estimated appropriation.

Officials from the **Office of the State Public Defender** indicated this initiative petition will not have any significant impact on their office.

Officials from the **State Treasurer's office** indicated they do not predict an immediate fiscal impact upon their office if Missouri's minimum wage rate were increased to $12.00 per hour. However, the potential future impact of applying cost of living increases and/or increases in the federal minimum wage to a Missouri minimum wage of $12.00 per hour, as called for elsewhere in Section 290.502, RSMo., is unknown.

Officials from **Greene County** indicated there are no estimated costs or savings to report from their county for this initiative petition.

Officials from the **City of Kansas City** indicated this petition may have a small negative fiscal impact on their city as a result of the increased hourly minimum wage being higher than the hourly rate paid some city employees.

Officials from the **City of Raymore** indicated no fiscal impact.

Officials from **University of Missouri** indicated they are not able to estimate any significant financial impact on their university.

Officials from **University of Central Missouri** indicated they estimate no fiscal impact since they are excluded under the public employer definition in section 4.

Officials from the **Missouri State University** indicated no fiscal impact.

Officials from **Missouri Southern State University** indicated they do not anticipate any fiscal impact from this initiative petition.

Officials from **Missouri Western State University** indicated the wording is unclear as to whether Colleges/Universities are included in this petition. In assuming they are included, they calculate the following significant fiscal impact to their university. The proposal will have a severe negative impact on the university. The proposed minimum wages increases beginning in 2019 at $8.60 per hour; with .85 increases for the next four years, 2023 @ $12.00 an hour, they project the overall increase in payroll expenditures to be in access of $200,000.00 in 2019 and more than $1,000,000.00 by 2023; resulting in the severe negative fiscal impact to the university.

Officials from the **Kansas City Board of Election Commissioners** indicated no fiscal effect on their operations.

Officials from the **Platte County Board of Elections** indicated no fiscal impact.

Officials from the **Jackson County Election Board** indicated this petition does not have a fiscal impact on their office.

Lara Granich and **Missouri Jobs with Justice Voter Action** provided the following information as proponents of this initiative petition.

This letter is from Lara Granich and Missouri Jobs with Justice Voter Action, proponents of the above-referenced Minimum Wage Initiative Petitions. Pursuant to RSMo. Section 116.175, we write to submit the following fiscal impact information to assist your office in its analysis of the fiscal impact of the above-mentioned seven proposed Minimum Wage Initiative Petitions.

Our analysis estimates the impact of the proposed Minimum Wage Initiative Petitions on state and local sales and personal income tax revenue in Missouri. We follow the process that has been used in the past to estimate the impact of minimum initiative petitions on state and local sales and personal income tax revenue, with some refinements. We also address certain claims that have been made by opponents of similar initiative petitions in the past.

As these petitions exclude public workers from the proposed minimum wage increases, we do not include in our analysis an estimate of the impact on state and local payroll costs of the proposed Minimum Wage Initiative Petitions.

I. Estimate of Number of Workers Affected Statewide and the Impact on Their Wages

Table 1. Summary of the Number of Affected Workers and Aggregate Wage Increases for Missouri in the Final Year of Minimum Wage Implementation.

Proposal	Year of Peak Minimum Wage (MW)	Proposed Peak MW	Tipped MW in Peak MW Year	Workers Affected by MW increase	Aggregate Annual Wage Increase in Nominal Dollars
13,14,15[a]	2023	$ 12.00	$ 6.00	835,350	$4,358,798,129
16,17,18[a]	2024	$ 12.00	$ 6.00	819,652	$4,209,438,048
19,20,21[a]	2025	$ 13.00	$ 6.50	900,788	$5,309,336,662
22,23,24[a]	2022	$ 11.00	$ 5.50	738,515	$3,347,138,756
25	2021	$ 11.00	$ 5.50	761,164	$3,469,534,559
26	2022	$ 12.00	$ 6.00	852,284	$4,510,285,824
27	2023	$ 13.00	$ 6.50	949,801	$5,667,065,534
28	2024	$ 12.00	$ 9.60	832,328	$4,288,614,460
29	2025	$ 13.00	$ 7.80	905,942	$5,332,471,496
30	2022	$ 12.00	$ 8.40	864,090	$4,558,317,729
31	2022	$ 12.00	$ 6.84	855,887	$4,523,341,931

32	2023	$ 13.00	$ 9.75	948,421	$5,745,051,956
33	2023	$ 13.00	$ 7.54	942,566	$5,685,951,766

Notes: Author's Analysis of American Community Survey (ACS) Data from 2014.
(a) Since these proposals only vary on non-economic factors, their economic and fiscal impacts are treated as equal for the purposes of this report.

Across the proposals analyzed, the total aggregate wage increase for workers in Missouri ranges from a low of $3.347 billion (Proposals 22-24) to a high of $5.745 billion under Proposal 32. While some proposals have the same final impact numbers, they have different impacts in the initial years (not listed) based on the relative pace of increases in earlier years. A full, year-by-year impact analysis is presented in Appendix Tables A1 through A13 below.

The wage impact of an increase in the minimum wage for the state of Missouri is calculated using the following procedure. The American Community Survey (ACS) Public Use Micro Sample for the most recent year available (2014) for the state of Missouri was downloaded from the US Census Bureau. The American Community Survey was chosen over the Current Population survey because the ACS has a significantly larger sample. We followed the method of Perry, Thomason, and Bernhardt (2016) for calculating an hourly wage rate from the ACS based on observed total annual wage income, typical hours worked each week and weeks worked per year. Since ACS income figures are clustered around whole-numbers, we smoothed the wage distribution by randomly adding or subtracting $0.25 from each wage figure.

Wage adjustments were made only for those individuals earning less than the proposed minimum wage, or proposed tipped minimum wage. We did not make additional adjustments for the "ripple effect" of minimum wage increases on workers earning slightly above the new threshold. Recent evidence suggests that workers earning up to 15 percent above of the minimum wage also receive small increases in response to a minimum wage increase. (See Wicks-Lim (2006) and Dube, Giuliano and Leonard (2015).) Thus, the estimated impacts listed above are likely to be smaller than the actual impact of increasing the minimum wage to the proposed level.

The proposed minimum wage increases exclude public employees. However, it was not practicable to exclude public employees from these calculations because the ACS does not have a published variable that allows for identification of public employees. Nonetheless, this inclusion of public employees should have only a minimal impact on our results, since their numbers are small and most already earn more than the proposed minimum wage increases.[1]

All wages from the 2014 survey were adjusted upward to account for inflation between the time of the survey and the time of measurement of the impact. Actual rates of inflation were used to adjust wages up to 2016. For all subsequent years between 2017 and 2028, baseline wages were adjusted using the projected annual average rate of change in the Consumer Price Index for Urban Workers (CPI-U) for the Midwest region. The 2015 and 2016 Missouri Minimum wage of $7.65 was adjusted by the same factor prior to measuring the impact of a change to the proposed minimum wage in 2019.

After these adjustments, the resulting hourly wage of all employees was compared to the proposed minimum wage. A total of twenty-one proposals were analyzed. For each proposal, we constructed a baseline wage scenario that used only basic wage changes from expected inflation rates to predict each ACS respondent's hourly wage rate in each year

[1] For Missouri's state employees, this can be validated by viewing the earnings of all state employees at: http://mapyourtaxes.mo.gov/MAP/Employees/. In larger counties and cities most all public employees already earn more than the highest proposed minimum wage. Smaller counties and towns may have some public employees who earn less than the highest proposed minimum.

between 2019 and 2028. We then constructed a counterfactual, or "proposed" wage distribution for each worker under all twenty-one minimum wage proposed scenarios. Since the minimum wage proposals offer nine different paths for raising the minimum wage for all non-tipped private sector workers, and different wage paths for tipped workers, we create separate minimum wage changes for tipped and non-tipped workers. Specifically, we used information on a worker's occupation and observed wage levels to separately identify tipped workers and assign them the proposed tipped minimum wage in each year, rather than the higher non-tipped minimum wage.[2]

If the proposed minimum wage was less than the inflation-adjusted hourly earnings of an employee, then no impact was calculated. If the proposed minimum wage was more than the hourly earnings for an employee, then the difference between the inflation-adjusted hourly earnings (i.e. baseline) and the proposed minimum wage was calculated. That difference was multiplied by the number of hours the employee worked in the year to calculate the annual impact for that employee. The result was then multiplied by a weighing factor for that employee in the population. The total impact for the state of Missouri was then summed across all affected workers to generate a total estimated increase in wage income in the state.

We do not include an estimate of job losses due to minimum wage changes. Existing research is clear that past minimum wage increases have had no measurable effect on aggregate employment levels. Larger minimum wage increases, such as those in Los Angeles, Seattle, and other jurisdictions, have not yet been studied to detect a clear disemployment effect. While it is possible that there may be some employment losses due to automation or other factors, this potential negative effect is likely offset by the positive potential job growth stemming from multiplier effects of the spending of minimum wage workers who receive substantial raises. There is substantial research to indicate that increases in the minimum wage have multiplier effects that increase the direct effects. For this reason and because of the likely increases in wages for individuals who earn above the proposed minimum wage rates, the impacts summarized in the table are considered conservative estimates relative to the total impact that would occur as a result of increasing the minimum wage to the proposed levels.

II. Economic Literature on the Impact of Minimum Wage Increases on Employment

Next, it is necessary to review the economic literature on the impact of minimum wage increases on employment. Opponents often claim that minimum wage increases may reduce employment in a state. If that is true, then those employment reductions would result in reductions in state income and sales tax revenue. However, review of the most credible recent empirical research on the minimum wage shows that increases in the minimum wage have had no discernible impact on employment. We thus conclude that it is not appropriate to project that the proposed initiative petitions would result in any detectable employment reduction, and resulting losses in income and sales tax revenue, or increases in unemployment-related costs to the state.

Economists have conducted hundreds of studies of the employment impact of the minimum wage. A recent meta-study – a formal statistical study of studies – by Doucouliagos and Stanley (2009) reviewed all the research conducted over the last three decades on the employment impact of minimum wage increases on teenagers in the United States. The researchers concluded that the minimum wage has little or no discernible effect on the employment prospects of low-wage workers. Their study followed a rigorous, peer-reviewed procedure and has the advantage of using a set of predetermined, objective criteria for weighing the validity of statistical findings across studies with different results.

[2] We defined tipped workers as those employed in occupations that typically receive a large share of income as tips. These occupations were 'Bartenders' (4040), 'Waiters and Waitresses', 'Food Servers, Non-restaurant' and 'Miscellaneous food preparation and serving related workers including dining room and cafeteria attendants and bartender helpers'.

(Source: Doucouliagos, Hristos and T. D. Stanley. 2009. "Publication Selection Bias in Minimum-Wage Research? A Meta-Regression Analysis." British Journal of Industrial Relations,vol. 47, no. 2, pp. 406-428.)

Recent theoretical and empirical research emphasizes several explanations for the consistently negligible employment impacts of moderate increases in the minimum wage. First, relative to total wage costs, minimum-wage increases are small. Second, employers and workers appear to respond to minimum-wage increases in many ways that reduce the direct cost to employers and substantially reduce or eliminate the need to cut employment.

Probably the most important economic response to a higher minimum wage is a reduction in turnover. At higher wages, employers fill vacancies faster and retain employees longer, boosting total employment and average productivity per worker while reducing direct and indirect training costs. Dube, Lester, and Reich (2012), for example, examined the effect of the minimum wage on labor turnover among teens and restaurant workers. They find "...striking evidence that separations, new hires, and turnover rates for teens and restaurant workers fall substantially following a minimum wage increase..." (p. 2). Their findings, using nationally representative data, are consistent with local case studies of the minimum wage and related "living wage" laws, including Dube, Naidu, and Reich's (2007) analysis of the San Francisco city-wide minimum wage; Fairris's (2005) study of local government contractors in Los Angeles; Howes (2005) on homecare workers in California; and Reich, Hall, and Jacobs (2005) on workers at the San Francisco airport.
(Sources: Dube, Arindrajit, T. William Lester, and Michael Reich. 2012. "Minimum Wage Shocks, Employment Flows and Labor Market Frictions." Berkeley, CA: Institute for Research on Labor and Employment. http://escholarship.org/uc/item/76p927ks; Dube, Arindrajit, Suresh Naidu, and Michael Reich. 2007. "The Economic Effects of a Citywide Minimum Wage." *Industrial and Labor Relations Review*, vol. 60, no. 4, pp. 522-543; Fairris, David. 2005. "The Impact of Living Wages on Employers: A Control Group Analysis of the Los Angeles Ordinance." *Industrial Relations*, vol. 44, no. 1, pp. 84-105; Howes, Candace. 2005. "Living Wages and the Retention of Home Care Workers in San Francisco." *Industrial Relations*, vol. 44, 5 no. 1, pp. 139-163; Reich, Michael, Peter Hall, and Ken Jacobs. 2005. "Living Wage Policies at the San Francisco Airport: Impacts on Workers and Businesses." *Industrial Relations*, vol. 44, no. 1, pp. 106-138.)

Employers also appear to respond to increases in the minimum wage by taking measures to boost productivity. Hirsch, Kaufman, and Zelenska's (2011) study of the impact of the federal minimum wage increase on 81 fast-food restaurants in Georgia and Alabama, for example, asked fast-food managers about the scope for efficiency improvements in response to the minimum-wage rise. About 90 percent of managers indicated that they planned to respond to the minimum wage increase with increased performance standards such as "requiring a better attendance and on-time record, faster and more proficient performance of job duties, taking on additional tasks, and faster termination of poor performers." (p. 27) Roughly the same share of managers said that they sought to "boost morale" by presenting the minimum wage increase as a "challenge to the store" and using this as a way "to energize employees to improve productivity." (pp. 28-29) Based on their interviews with store managers, the researchers concluded that a minimum wage increase may function as a "catalyst or shock that forces managers to step out of the daily routine and think about where cost savings can occur." (p. 29) (Source: Hirsch, Barry T., Bruce Kaufman, and Tetyana Zelenska, "Minimum Wage Channels of Adjustment." IZA Discussion Paper No. 6132. Germany: Institute for the Study of Labor. http://www2.gsu.edu/~ecobth/IZA_HKZ_MinWageCoA_dp6132.pdf)

A higher minimum wage may also motivate workers to work harder, independently of any actions by employers to increase productivity. According to "efficiency wage" theory, wages above the competitive-market rate may elicit greater work effort for several reasons. As Carl Shapiro and Joseph Stiglitz (1984) have argued, higher pay increases the cost to workers of losing their job, potentially inducing greater effort from workers in order to reduce their chances of

being fired. George Akerlof (1982), arguing from a more sociological point of view, has suggested that workers may see higher wages as a gift from employers, leading workers to reciprocate by working harder. (Sources: Shapiro, Carl and Joseph E. Stiglitz. 1984. "Equilibrium unemployment as a worker discipline device." *American Economic Review*, vol. 74, no. 3, pp. 433-444; Akerlof, George A. 1982. "Labor contracts as partial gift exchange." *Quarterly Journal of Economics*, vol. 97, no. 4, pp. 543-569.)

We therefore conclude that the proposed increase in the Missouri minimum wage would have no discernible impact on the employment levels of low-wage workers. Accordingly, we do not factor in reductions in employment, or any resulting decrease in sales tax or income tax. We also do not project any increased unemployment insurance costs – both because we do not project any resulting job losses, and, additionally, because unemployment insurance costs are paid for by employer premiums, and so are ultimately not a cost to the state.

For similar reasons, we do not believe that the proposed increase will have any significant adverse economic impact on small businesses or, by extension, on corporate income tax revenue. In fact, many small businesses already pay little if any corporate income tax.

III. State and Local Sales and Personal Income Tax Revenue Impact of Raising the Minimum Wage

Based on the wage impact figures calculated above, and the understanding that the minimum wage increases would be unlikely to result in offsetting job losses, we next calculate the impact of the projected wage increases on state and local sales and personal income tax revenue in Missouri. We project only the direct impact of the various minimum wage increase scenarios on such tax revenue. We do not attempt to project the additional impact through a GDP multiplier effect, or the potentially higher sales taxes generated if employers offset wage increases with higher prices (which would be taxable).

Personal Income Tax Revenue. In order to determine the projected increase in personal income tax revenues that would result directly from the increased wages, we had to develop assumptions about the effective income tax rates of the affected workers. We made the following assumptions with respect to the effective tax rate:

1. That 25% of affected workers can be claimed as a dependent on another party's Missouri income tax return and, as a result, would pay an effective tax rate of 6.0% on the increase in income;
2. That 50% of the affected workers would file as single taxpayers, would claim one deduction of $2,100, and would be entitled to a standard deduction of $5,800. This would result in an effective tax rate of 2.47%;
3. The remaining 25% would, we assumed, pay no additional Missouri income tax.

In light of these assumptions, the increased Missouri income tax revenue for each petition version can be calculated as follows: (total wage increase * 25% * 6.0%) + (total wage increase * 50% * 2.47%) + (total wage increase *25% * 0%).

Sales Tax Revenue. The state of Missouri imposes a 4.225% state sales tax on those items that are not exempt from the sales tax base. In addition, the average local sales tax rate is 2.95%. As a result, the average Missouri net sales tax rate is 7.175%. To estimate the share of income that is spent on goods and services that are subject to sales taxes, we used data from the 2015 Consumer Expenditure Survey (CES) for the US to estimate the share of income spent on categories that are subject to sales taxes. The CES summary tables list average spending per consumer across 20 different

categories (e.g. housing, transportation, food away from home) and we categorized each spending item as taxable or non-taxable and then calculated the share of spending that we taxable.[3] The resulting rate was 30.3 percent.

Based upon the above assumptions, and the total wage increase calculations for each version of the petition, we estimate that the increase in state income tax revenue resulting from the increased wages would be as follows:

Table 2. Summary of the Impact of Minimum Wage Increases on State and Local Sales and Income Taxes in Year of Full Minimum Wage Final Implementation.

Proposal	State Sales Tax (4.225%)	Local Sales Tax Revenue (2.95%)	Total Sales Tax Revenue Increase	Personal Income Tax Revenue	Total Sales and Personal Income Tax Revenue Increase
13,14,15[a]	$55,814,587	$38,971,132	$94,785,719	$119,213,129	$213,998,848

31	$57,921,577	$40,442,285	$98,363,862	$123,713,402	$222,077,264
32	$73,565,624	$51,365,347	$124,930,970	$157,127,171	$282,058,141
33	$72,808,843	$50,836,944	$123,645,787	$155,510,781	$279,156,568

Note: Author's Analysis of American Community Survey (ACS) data from 2014 and fiscal impact assumptions described above. All dollars are in nominal figures. (a) Since these proposals only vary on non-economic factors, their economic and fiscal impacts are treated as equal for the purposes of this report.

As described in Table 2 above, the fiscal impact of the proposed minimum wage increases varies based on the ultimate level of the minimum wage and the degree of tipped minimum wage phase out. The estimates of the total fiscal benefit range from $164 million to $282 million annually. Appendix tables A1 through A13 provide a year-by-year summary of the fiscal benefits.

[3] Specifically, the categories we assumed to be subject to state and local sales taxes are: food, household furnishings and equipment, vehicle purchases, gasoline and motor oil, entertainment, and all other expenditures. We assumed that 50 percent of the spending on the category "apparel and services" was taxable.

We hope that this information is useful to your office as your prepare your analyses of the petitions.

Respectfully submitted,

Lara Granich

1) Total employed workers in 2014 from the ACS was estimated to be 2,795,876. This figure was inflated to each subsequent year based on the population projections in the State of Missouri between 2020 and 2030 (CAGR = 0.6%)

Robert Bonney, Chief Executive Officer of the Missouri Restaurant Association provided the following information as an opponent of this initiative petition.

These corrections were subsequently provided to the submitted information

In the table on the bottom of page 7 and top of page 8, both averages for 2023 should be based on a 5 year phase-in. Accordingly, the figure on that table should state for 2023 ($12) Average Annual Unemployment Premiums Paid by State of $16,269,523.52.

The corresponding change on the table on page 12 would be to state, for 2023 ($12) Total Net Loss to State Government from Taxes and Unemployment Insurance of ($19,137,851.76).

Re: Initiative Petitions 2018-196 through 2018-216

Dear Mr. Halwes,

I write on behalf of Robert Bonney. Mr. Bonney is the Chief Executive Officer of the Missouri Restaurant Association. Please consider this letter and the accompanying studies as his fiscal impact statement as an opponent of Initiative Petitions 2018-196 through 2018-216 (the "Initiative Petitions"). If passed, any of these twenty-one initiatives would have a substantial negative impact on state and local governments, as well as Missouri small businesses. Those effects are both direct (as noted in Section 1) and secondary (as noted in Sections 2 through 5). The direct effects stem from higher labor and contracting costs that the state and its political subdivisions will incur, despite the Initiatives' effort to exclude government workers from the mandate.

The indirect effects will present a debate this Office has seen before. The proponents of the Initiative Petitions will once again rely on data sourced from political activist groups who claim increases in the minimum wage only serve to create new taxable income. The reality is that such groups approach this issue with political bias. Their analysis is one-sided because it completely ignores the fact that a wage increase does not "create" income from thin air; instead, it is an economic transfer from Missouri businesses to workers. Missouri businesses must pay the new wages "created" by the increases. Political activists' models fail to account, then, for two specific manifestations of the "debit" side of this transfer: reductions in employment, and the reduction in corporate income tax paid based upon business done in Missouri.

The failure to account for any employment effect at any proposed wage increase—even a drastic increase of the minimum wage to $13—is particularly puzzling, because Missouri's most populous areas border Illinois and Kansas. These states, respectively, have minimum wages of $8.25 and $7.25. Neither state adjusts the minimum wage for inflation. Likewise, the second effect—loss of corporate income tax revenues—is a mathematical certainty. Missouri businesses will be the source of the wage increase, which will lower their own taxable income. Assuming a one-to-one substitution of "created" wages for lost corporate income, the difference in the rates

at which these two types of income are taxed will result in a net decrease in state revenue. A dollar from increased wages is taxable by state government in Missouri at 6% or substantially less, whereas Missouri's corporate income tax rate is 6.25%.

On top of these two types of negative outcomes—lower employment and lower state tax revenues—there may be second-order effects to small businesses because they lack the access to capital to weather price fluctuations; they may not survive at all because they may not have the flexibility to simply cut employment, shifting their reliance to capital instead of labor resources, or suffering a decrease in production and revenue.

In short, much of the fiscal impact regarding the current crop of wage-related ballot measures is secondary: they cause transfers of wealth within (or out of) the state economy, and those transfers of wealth then create second-order effects for state and local governments via their collection of tax revenues and provision of welfare services for the unemployed or less-employed. Because these fiscal notes call for the Auditor operate in the area of secondary effects, it is critical that she treat both sides of the wealth transfer equally, and refrain from assessing only one half of the wage increase equation.

1. Direct Labor Cost Impact on State and Local Government Budgets

As noted to the State Auditor's Office previously by Dr. David Macpherson, a nationally prominent labor and economics expert, there are two ways to measure labor cost on state and local government budgets. First, one can use the information included in fiscal note responses from state and local government entities. It is important to note that these fiscal notes provide an incomplete and, therefore, too-low estimate of labor cost. Few state and local government entities respond to requests for a fiscal note response, and those that do respond often ignore important effects.

Second, data from the U.S. Census Bureau's Current Population Survey (CPS) can be used to calculate increased labor cost to state and local government entities in Missouri. To combat this time-honored analysis, and in a blatant attempt to manipulate the fiscal note process, the Initiative Petitions provide that they will raise the minimum wage for private workers, but not for workers employed by state or local governmental entities. No conceivable justification exists for solely raising the minimum wage on private businesses. Whatever the disparity between the value of total compensation at a private business and at a government employer, that disparity does not approach the wage adjustments at issue here, ranging from an inflation adjusted wage increase of 51.16% (($13-$8.60)/$8.60) in Initiative Petitions 2018-198 through 2018-201 to a wage increase of 30.17% (($11-$8.45)/$8.45) in Initiative Petitions 2018-213 through 2018-215.

Moreover, it is unreasonable to assume that on a sustained basis public employers, as defined in the Initiative Petitions, would be able to maintain dramatically lower wage levels than private businesses. Public employers would lose staff employable at higher rates in the private market, imposing substantial costs on government productivity. Using the method traditionally employed by labor economists and followed by the Auditor's office, one can calculate the annual

wage costs to state and local governmental entities, based on the annual wage cost for each state and local government worker in the ORG CPS, as detailed on page 6 of Dr. Macpherson's 2012 report, attached hereto as **Exhibit A**. Even if the auditor finds that a specific estimate of costs is not determinable, the auditor should note that state and local government "operating costs could increase by an unknown annual amount that could be significant," through the form of higher wage costs and higher contracting costs.

The proponents of the Initiative Petitions may argue that the Auditor should abandon any state and local cost estimates altogether. The proponents will argue that provisions they have inserted in the statute would mean that state and local government entities will not have to pay higher wages to their employees. Setting aside unjustifiable discrimination against private employers (and "public employees"), the provision is of uncertain legal effect and constitutionality. A "public employer," defined in the initiatives as "the state or a political subdivision of the state" still incurs substantial costs for wages of individuals that are "private employees," rather than "public employees." Cleaning services, food service, and other essential services often rely on state contracts with outside vendors. Sometimes, a contract rate may vary depending on the cost of labor. Even if the contract rate is fixed, it must be re-bid periodically, and that bidding process would take into account the new minimum wage. Plainly, the initiative would impose higher costs for state and local governments in contracting with any private entity and its employees. As a matter of law, it would be insufficient and unfair for the Auditor's fiscal note or summary to simply assume that these costs to state and local governmental entities do not exist.

2. Cost of Unemployment Benefits

a) The effect of inflation on Missouri's minimum wage

CPS–ORG data show that between 2007 and 2015, median nominal wages for adult (25–59 years old) workers in the U.S. grew by 1.68 percent a year. However, Missouri's minimum wage is currently adjusted using "the percentage increase or decrease as of the preceding July over the level as of July of the immediately preceding year of the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W)." Section 290.502, RSMo. Coincidentally (or perhaps not), the CPI-W, over the period from 2006 to 2016, also increased at an average rate of 1.68 percent a year.

Year	CPI-W	Observed inflation %
2006	199.2	
2007	203.7	0.022590361
2008	216.304	0.061875307
2009	210.526	-0.0267124

2010	213.898	0.016017024
2011	222.686	0.041085003
2012	225.568	0.01294199
2013	230.084	0.02002057
2014	234.525	0.019301646
2015	233.806	-0.00306577
2016	234.771	0.004127353

Using Missouri's current inflation-adjusted minimum wage rate and an assumed, constant 1.68 percent increase in the CPI-W, the minimum wage in Missouri will be as follows:

Year	Estimated Minimum Wage
2016	$7.65 (observed)
2017	$7.70 (observed)
2018	$7.85
2019	$8.00
2020	$8.15
2021	$8.30
2022	$8.45
2023	$8.60
2024	$8.75
2025	$8.90
2026	$9.05

b) Calculating job loss attributable to increased minimum wage

At least one outside economist, James Sherk, has already provided an estimate for job loss in Missouri based on a $15 minimum wage. Mr. Sherk calculated the effect of a $15 minimum wage implemented in 2021. Mr. Sherk's figures accounted for inflation by estimating the present value of $15.00 in 2021, rather than estimating an absolute figure for wage inflation in Missouri. Mr. Sherk calculated the present value of $15.00 in 2021 to be $13.57, per hour, based on wage inflation of 1.68 percent. Mr. Sherk evaluated the change from $7.65 per hour to $13.57 per hour (a 77.39% increase), exclusive of agricultural workers. Cumulatively, Mr. Sherk calculated this 77.39 percent increase in wages to reduce employment in the affected workforce by (0.7739*0.677) 52.39%.

Graves Garrett LLC

Mr. Sherk calculated that approximately 40.9% of Missouri's Wage and Salary Workers would be affected by such a $15 minimum wage. Mr. Sherk's calculations reveal that a $15 minimum wage in 2021 would be expected to reduce the number of full-time equivalent jobs in Missouri by approximately 218,000. Based on CPS–ORG data, these figures reveal an affected workforce of approximately 416,086 workers impacted by a $15 minimum wage increase in 2021.

However, in 2014, Dr. Macpherson found, using more conservative, national-level Congressional Budget Office data, that an increase to a $10.10 minimum wage, effective January 1, 2015, would eliminate about 15,700 jobs in Missouri. Dr. Macpherson analyzed the effect of a Missouri $10.10 minimum wage using a model suitable to a national analysis. This analysis predicted a loss of 15,700 Missouri jobs based on a wage increase from $7.50 in 2014 to $10.10 in 2015 (a 34.67% increase).

On the whole, the analysis by Mr. Sherk is more instructive here, since it is more recent, Missouri-specific, and anticipates larger wage changes contemplated by the Initiative Petitions. The most accurate way to determine the estimate of Workers Affected would be to analyze the CPS–ORG data. However, without such data readily available in the time constraints imposed by the fiscal note process, it is reasonable for estimation purposes to assume Mr. Sherk's figures are evenly distributed. Assuming that worker data follows an equal distribution, the Initiative Petitions would be expected to result in the following job losses:

Year of final prescribed wage increase	Wage without IP	Wage mandated by IP	Percentage increase	Percentage of affected workers who lose jobs (Percentage Increase x 0.677 Elasticity)	Estimate of Workers Affected	Estimate of Missouri Workers Unemployed by Initiative
2021	$8.30	$11.00	32.53%	22.02%	174,897	38,512
2022	$8.45	$11.00	30.18%	20.43%	162,262	33,150
2022	$8.45	$12.00	42.01%	28.44%	225,866	64,236
2023	$8.60	$12.00	39.53%	26.77%	212,532	56,895
2023	$8.60	$13.00	51.16%	34.64%	275,061	95,281
2024	$8.75	$12.00	37.14%	25.15%	199,683	50,220
2024	$8.75	$13.00	48.57%	32.88%	261,136	85,861
2025	$8.90	$13.00	46.07%	31.19%	247,695	77,256
2026	$9.05	$13.00	43.65%	29.55%	234,683	69,349

c) The best estimate for a price elasticity of demand for low-skilled labor is -0.677.

As noted by Mr. Sherk, starting wages of $15.00 per hour mean that full-time employee must create at least $38,700 a year in value for his or her employer (including wages, employer payroll taxes, and mandatory healthcare benefits). High minimum wages and mandatory benefit costs make it much harder for less-experienced and less-skilled workers to find jobs, particularly full-time work.

Recent labor economics scholarship has revealed that, accounting for publication bias, a state-specific elasticity of demand for less-skilled workers is, on average, approximately -0.677, though some estimates are even higher, around -1.0.[1] "[E]conomists have extensively studied how businesses respond to higher wages overall, not just minimum-wage increases. On average these studies find a 10 percent increase in labor costs causes firms to reduce employment of less-skilled workers by 6.8 percent in the long run."[2]

While these elasticity estimates are substantial in absolute terms, there is reason to believe that such estimates might still understate the impact of a Missouri state-specific effort to increase the minimum wage. This is so for several reasons. First, traditionally, labor economists view labor as a reasonably difficult input to substitute; however, Missouri businesses have readily available options. There are relatively few barriers to doing business in Missouri's border states, and businesses can easily relocate across a state line to take advantage of more favorable wage (and tax laws). Additionally, substantially raising the cost for Missouri labor, relative to labor sources in other states and other countries, is likely to force many manufacturing jobs in Missouri to disappear entirely. Automation is also a significant risk. The substitution of labor is becoming increasingly easy due to technology advancements and the "sharing" economy, where fewer individuals are "employees" covered by the minimum wage. Finally, a labor "price shock" may result in significant decreases in the demand for goods and services. People make behavioral changes to avoid higher costs, including eating out less often and generally decreasing consumption (or shifting their activities to consumption involving comparatively low amounts of labor) wherever possible.

[1] Sherk, James, "How $15-per-Hour Minimum Starting Wages Would Affect Each State," The Heritage Foundation, http://report.heritage.org/ib4601.

[2] "The coefficients on these estimates imply an elasticity of –0.677 for a study published in 2012 (the most recent year in their data) of long-run unconditional labor demand for low-skilled labor in the U.S., estimated using industry-level administrative panel data and a structural form model." "Estimates that do not account for publication bias tend to slow a long-run elasticity closer to –1.0. See, for example, George Borjas, Labor Economics, 6th ed. (Columbus, OH: McGraw-Hill, 2013), Chapter 4: 'The evidence also suggests that the estimates of the long-run labor demand elasticity cluster around –1, so the long-run labor demand curve is indeed more elastic than the short-run curve.' " Sherk, available at http://report.heritage.org/ib4601.

Graves Garrett LLC

d) Unemployment Benefit Costs

We derived an average unemployment payout by calculating the expected weekly unemployment benefit amount. Based on current data, the expected unemployment weekly benefit amount of a worker making $7.65 an hour, on a 40 hour workweek, is $159.12 per week, for 20 weeks.[3] The expected unemployment weekly benefit amount of a worker making $10.99 an hour is $228.59 per week. The expected unemployment weekly benefit amount of a worker making $11.99 an hour is $249.39 per week. The expected unemployment weekly benefit amount of a worker making $12.99 an hour is $270.19 per week. We assume that workers will seek unemployment insurance for the full twenty weeks authorized under Missouri law, because unemployment attributable to an increase in the minimum wage is structural. In this case, structural unemployment occurs because workers' job skills do not meet the established "price floor" of labor, rendering the worker's skills unmarketable. Assuming an even distribution of workers affected, the average unemployment benefit cost to the state for a worker is calculated as follows:

- For Initiative Petitions 2018-213 through 2018-216, [($159.12+$228.59)/2]*20 = $3,877.10
- For Initiative Petitions 2018-196, 2018-197, 2018-200, 2018-202, and 2018-204 through 209, [($159.12+$249.39)/2]*20 = $4,085.10
- For Initiative Petitions 2018-198, 2018-199, 2018-201, 2018-203, 2018-210 through 2018-212, [($159.12+$270.19)/2]*20 = $4,293.10

Consistent with Dr. Macpherson's 2012 report, it would be reasonable for the Auditor to assume that 35% of unemployed workers will receive unemployment benefits. Combining these numbers leads to the following estimates:

Year of final prescribed wage increase	Estimate of Missouri Workers Unemployed by Initiative	Estimated Unemployment Amount Per Worker	Estimated Total Unemployment Premiums Paid	Average Annual Unemployment Premiums Paid by State
2021 ($11)	38,512	3,877.10	$52,260,206.32	$17,420,068.77
2022 ($11)	33,150	3,877.10	$44,984,052.75	$11,246,013.19
2022 ($12)	64,236	4,085.10	$91,843,669.26	$22,960,917.32
2023 ($12)	56,895	4,085.10	$81,347,617.58	$20,336,904.39

[3] https://labor.mo.gov/DES/Claims/calculator. A 2015 law decreased the unemployment benefit period from 20 weeks to 13 weeks, but the Supreme Court of Missouri struck down the law in July 2016.

2023 ($13)	95,281	4,293.10	$143,167,801.39	$28,633,560.28
2024 ($12)	50,220	4,085.10	$71,803,802.70	$11,967,300.45
2024 ($13)	85,861	4,293.10	$129,013,450.69	$21,502,241.78
2025 ($13)	77,256	4,293.10	$116,083,706.76	$16,583,386.68
2026 ($13)	69,349	4,293.10	$104,202,767.17	$13,025,345.90

3. Impact on State Income Tax Revenue

The 2012 analysis prepared by Dr. Macpherson may also be used as a reference in calculating the effect of the initiative petitions on state income tax revenue. Here, again, it is reasonable to assume that our "affected workers" are evenly distributed, though precise CPS–ORG data would also provide a reliable estimate. Here, the increased income tax revenue is the additional income tax paid by workers whose wages increase. There is a loss of revenue, however, in the form of decreased income tax paid by workers whose wages decrease and businesses who absorb the increased cost of labor, rather than passing it along to customers.

For the purposes of these estimates, we assume that workers work 40 hours a week and 52 weeks per year:

Year of final prescribed wage increase	Estimate of Workers Affected	Estimate of Missouri Workers Unemployed by IP	Estimate of Missouri Workers with Increased Wages	Annual Increase in Wages Paid to Workers who get Wage Increase in Final Year	Annual Decrease in Wages Paid to Workers now Unemployed
2021 ($11)	174,897	38,512	136,385	$382,969,080.00	$108,141,696.00

2022 ($11)	162,262	33,150	129,112	$342,405,024.00	$87,913,800.00
2022 ($12)	225,866	64,236	161,630	$596,737,960.00	$237,159,312.00
2023 ($12)	212,532	56,895	155,637	$550,332,432.00	$201,180,720.00
2023 ($13)	275,061	95,281	179,780	$822,673,280.00	$436,005,856.00
2024 ($12)	199,683	50,220	149,463	$505,184,940.00	$169,743,600.00
2024 ($13)	261,136	85,861	175,275	$774,715,500.00	$379,505,620.00
2025 ($13)	247,695	77,256	170,439	$726,750,021.03	$329,419,584.00
2026 ($13)	234,683	69,349	165,334	$679,192,072.00	$284,885,692.00

These net wage increases will lead to corresponding increases in state income tax collections. Traditionally, it has been assumed that about 50% of affected workers will pay 6% income tax, while the other 50% of workers pay no state income tax. This assumption may be less accurate at the higher wage increases contemplated by the Initiative Petitions. Accordingly, figures are also displayed assuming that about 75% of affected workers will pay 6% income tax, while the other 25% of workers pay no state income tax.

Annual Net Increase in Wages Paid To Workers	Annual Income Tax Increase from Wage Increase (50% pay tax)	Annual Income Tax Increase from Wage Increase (75% pay tax)
$274,827,384.00	$8,244,821.52	$12,367,232.28
$254,491,224.00	$7,634,736.72	$11,452,105.08
$359,578,648.00	$10,787,359.44	$16,181,039.16
$349,151,712.00	$10,474,551.36	$15,711,827.04
$386,667,424.00	$11,600,022.72	$17,400,034.08
$335,441,340.00	$10,063,240.20	$15,094,860.30

$394,306,380.00	$11,829,191.40	$17,743,787.10

Graves Garrett LLC

Based on these figures, Missouri businesses must also decide whether to pass along any increase in wage costs (wages and mandatory payments).[4]

Year of final prescribed wage increase	Annual Cost to Business from Increased Wage	Annual Decreased Corporate Income Tax if cost is fully absorbed	Annual Decreased Corporate Income Tax if cost is 50% absorbed
2021 ($11)	$412,266,214.62	$25,766,638.41	$12,883,319.21
2022 ($11)	$368,599,008.34	$23,037,438.02	$11,518,719.01
2022 ($12)	$642,388,413.94	$40,149,275.87	$20,074,637.94
2023 ($12)	$592,432,863.05	$37,027,053.94	$18,513,526.97
2023 ($13)	$885,607,785.92	$55,350,486.62	$27,675,243.31
2024 ($12)	$543,831,587.91	$33,989,474.24	$16,994,737.12
2024 ($13)	$833,981,235.80	$52,123,827.23	$26,061,913.62
2025 ($13)	$782,346,397.64	$48,896,649.85	$24,448,324.93
2026 ($13)	$731,150,265.50	$45,696,891.59	$22,848,445.80

Assuming businesses absorb half of the cost of increased wages, and 75 percent of affected workers pay the new, higher taxes, the effect on state income tax collections is estimated to be:

Year of final prescribed wage increase	Annual Net Income Tax Revenue Loss
2021 ($11)	($516,086.93)
2022 ($11)	($66,613.93)
2022 ($12)	($3,893,598.78)
2023 ($12)	($2,801,699.93)
2023 ($13)	($10,275,209.23)
2024 ($12)	($1,899,876.82)
2024 ($13)	($8,277,469.02)
2025 ($13)	($6,568,455.26)
2026 ($13)	($5,104,658.70)

[4] A healthcare benefit cost estimate is not available based on the time limitations imposed by this fiscal note.

Graves Garrett LLC

4. Sales tax revenue gain or loss

Projecting any increase in sales tax revenue resulting from an increased minimum wage would require the auditor's office to conclude, based on data separate and apart from the sheer conjecture typically offered by political activist groups: (1) the net effect on consumer disposable income and (2) the percentage of a consumer's disposable income that is spent on goods subject to the sales tax, taking into consideration that the scope of Missouri's sales tax has been truncated by a voter-approved constitutional amendment from November 2016.

Typically, the Auditor's office multiplies the total increase in worker earnings (which should be adjusted for employment reductions) and multiplies the result by 25 percent, then multiplying that figure by the Missouri the population weighted combined average state and local sales tax in Missouri, 7.81%.[5] Based on this estimate, the population-weighted combined average local sales tax is 3.585%.

However, it would be deceptive to fail to account for sales tax losses from workers whose wages are eliminated or sales tax losses from reduced business profits (attributable to the higher wages paid), which will lower spending by business owners. The first figure is calculable by determining the total annual wages (adjusted for employment deductions) for all workers who lose jobs due to a minimum wage hike, multiplied by 25 percent. The second number is calculable by multiplying the total increase in worker earnings (multiplied by 1.0765 to account for Social Security and Medicare taxes) by approximately 15 percent.[6]

Year of final prescribed wage increase	Annual Net Increase in Wages Paid To Workers	New Wages Spent on Sales Tax Items	Annual Cost to Business from Increased Wage	Annual Business Income No Longer Included in Sales Tax Base (50% passed-through)
2021 ($11)	$274,827,384	$68,706,846	$412,266,214.62	($61,839,932)
2022 ($11)	$254,491,224	$63,622,806	$368,599,008.34	($55,289,851)
2022 ($12)	$359,578,648	$89,894,662	$642,388,413.94	($96,358,262)
2023 ($12)	$349,151,712	$87,287,928	$592,432,863.05	($88,864,929)

[5] http://taxfoundation.org/sites/taxfoundation.org/files/docs/LOST--2015.png.
[6] This estimate would also need to be adjusted to reflect certain employers' mandate under the Affordable Care Act to provide healthcare coverage and pay 60 percent of such coverage.

2023 ($13)	$386,667,424	$96,666,856	$885,607,785.92	($132,841,168)
2024 ($12)	$335,441,340	$83,860,335	$543,831,587.91	($81,574,738)
2024 ($13)	$395,209,880	$98,802,470	$833,981,235.75	($125,097,185)
2025 ($13)	$397,330,437	$99,332,609	$782,346,397.64	($117,351,960)
2026 ($13)	$394,306,380	$98,576,595	$731,150,265.51	($109,672,540)

Accordingly, the annual estimations of the effects on state and local revenue, and total state economic impact are as follows:

Year of final prescribed wage increase	Annual Net Income Tax Revenue Loss	Annual Net Effect on State Sales Tax	Total Annual Effect on State Tax Revenue	Total Net Loss to State Government from Taxes and Unemployment Insurance	Annual Net Effect on Local Sales Tax
2021 ($11)	($516,086.93)	$290,127.11	($225,959.82)	($17,646,028.59)	$246,178.86
2022 ($11)	($66,613.93)	$352,067.34	$285,453.41	($10,960,559.78)	$298,736.43
2022 ($12)	($3,893,598.78)	($273,087.10)	($4,166,685.88)	($27,127,603.19)	($231,720.06)
2023 ($12)	($2,801,699.93)	($66,628.31)	($2,868,328.24)	($23,205,232.64)	($56,535.50)
2023 ($13)	($10,275,209.23)	($1,528,364.68)	($11,803,573.91)	($40,437,134.18)	($1,296,849.08)
2024 ($12)	($1,899,876.82)	$96,566.47	($1,803,310.36)	($13,770,610.81)	$81,938.65
2024 ($13)	($8,277,469.02)	($1,110,951.72)	($9,388,420.74)	($30,890,662.52)	($942,665.55)
2025 ($13)	($6,136,139.31)	($761,317.55)	($6,897,456.87)	($23,480,843.55)	($645,993.71)
2026 ($13)	($5,104,658.70)	($468,803.67)	($5,573,462.37)	($18,598,808.26)	($397,789.62)

5. Damage to small business

Additionally, any proponent or opponent fiscal note submission is required, pursuant to Missouri law, to state the impact of the initiative on small businesses. According to analysis by the Employment Policies Institute, 40 percent of the minimum wage workforce is employed at businesses with fewer than 50 employees. [7] The impact on extra costs to small business may be more significant than even this 40% figure suggests. Small businesses are more easily shut down by input price increases than large businesses, which have greater access to capital to weather the

[7] https://www.epionline.org/oped/who-really-employs-minimum-wage-workers/

storm. Clearly, small businesses that do not shut down due to increases in the minimum wage will pay higher costs, estimated at about 40% of business' total increased costs, described above.

Conclusion

In conclusion, the State Auditor should attempt to quantify the increased cost to be borne by state and local government entities through increased contracting costs as a result of an increase to the minimum wage. This direct cost is outlined in Section 1.

Indirect costs are outlined in Sections 2 through 5, and show a net loss. Although such second-order effects more difficult to predict, a net loss is easily the most likely outcome. Significantly, this result is only obtainable if the Auditor reviews both the "credit" and "debit" sides of the transfer of wealth from businesses to workers. The Auditor should refrain from taking the proponents' likely invitation to consider and present only the "credit," side, and should attempt to provide a complete picture of all effects of a minimum wage increase, including the loss of revenue to state and local governments from individuals who lose employment. Only conveying (or quantifying) the potential for gain, without fairly conveying the likelihood of net loss, would be deceptive and unfair.

The State Auditor's previous 2018 fiscal notes are a good model. Each of the fiscal notes for the Initiative Petitions should follow the already-established format and state that:

> "[O]perating costs could increase by an unknown annual amount that could be significant. State and local government tax revenue could change by an unknown annual amount ranging from a $## million decrease to a $## million increase depending on business decisions."

Should you desire further detail or have any questions about this fiscal impact statement, please do not hesitate to contact me.

Sincerely,

Edward D. Greim

ABOUT THE MISSOURI RESTAURANT ASSOCIATION

With origins dating back to 1916, the Missouri Restaurant Association (MRA) is a statewide trade association representing over 1,500 member establishments. The association's membership is diverse, and includes full service, fast casual, and quick service restaurants, cafeterias, hotels, schools, institutions, contract feeders, and ancillary foodservice providers such as theme parks. The association has been successful in securing support from virtually every segment of the foodservice and hospitality industry.

MRA includes seven chapters as extensions of the parent organization, each with its own Officers, Board of Directors, and limited budget. The association is governed by a Board of Directors comprised of five Officers, 33 Directors, and each President of the seven affiliated chapters.

MRA is dedicated to serving the needs of the foodservice and hospitality industry, enhancing and improving its growth and development, assisting and educating its members in operating more effectively, improving the political and social environment in which the industry conducts business, for the benefit of its members, patrons, employees, and the well-being of the community.

David A. Macpherson is the E.M. Stevens Professor of Economics at Trinity University. He received undergraduate and doctoral degrees in economics from Pennsylvania State University.

Dr. Macpherson has published over 60 articles in leading economics and real estate journals including Review of Economics and Statistics, Industrial and Labor Relations Review, Journal of Labor Economics, Journal of Human Resources, and Journal of Real Estate Economics and Finance. His research has been funded by a variety of entities including the National Science Foundation, Florida Legislature, and the National Association of Realtors. He is co-author of the undergraduate labor economics text, Contemporary Labor Economics, as well as the principles of economics text, Economics: Private and Public Choice. He is included in Who's Who in Economics, Fourth Edition, which includes the 1,200 most frequently cited economists.

THE IMPACT OF A $10.10 MINIMUM WAGE ON JOBS AND TAXPAYER COSTS IN MISSOURI

June 2014

Economic Analysis by **Dr. David Macpherson**

Index

Executive Summary 4
Results 5
Technical Appendix 7

EXECUTIVE SUMMARY

Missouri's minimum wage of $7.50 is linked to rise in most years with the inflation rate. But some state legislators and labor unions would like to raise that figure even higher. For instance, a recent labor union-organized bus tour in the state promoted a $10.10 minimum wage in St. Louis.

Proponents have enthusiastically pointed to the benefits of the $10.10 policy. But there's been far less discussion of the costs involved with a $10.10-an-hour minimum wage—both the cost on employment, and the cost to taxpayers.

In this study, labor economist David Macpherson of Trinity University uses Census Bureau data to estimate the impact on Missouri's labor market and budget from raising the minimum wage to $10.10 an hour. He also provides separate results for the St. Louis metropolitan area.

Dr. Macpherson's employment estimates follow the methodology used by the nonpartisan Congressional Budget Office in its report earlier this year estimating the impact of a $10.10 minimum wage nationwide, which in turn relied on 60 different empirical studies to formulate its estimates.

Statewide, he finds that over 15,000 jobs would be lost at the $10.10 wage level—with 9,300 of those jobs being held by women. In the St. Louis metropolitan area, approximately 4,800 jobs would be lost from a $10.10 minimum wage.

The cost to taxpayers would be significant: There are approximately 40,000 state and local employees whose wages would be affected by the $10.10 increase in Missouri, for a combined cost to taxpayers of $87 million annually.

Raising wages is an admirable goal, but the evidence suggests that accomplishing this goal with a blunt wage mandate could do more harm than good.

RESULTS

The minimum wage is one of the most hotly-debated topics in the political world. Some legislators claim that a higher base wage will stimulate the economy; others claim that it will reduce jobs when affected employers can't offset the higher costs through higher prices.

Economists, who have studied the issue since the late 1940s, tend to take a skeptical view of minimum wage increases. Since the early 1990s, for instance, roughly 85 percent of the most credible research on the minimum wage points to job loss for less-skilled groups. The nonpartisan Congressional Budget Office (CBO), in an evaluation of President Obama's proposed $10.10 minimum wage increase, reviewed 60 different studies and concluded that the policy would eliminate 500,000 jobs if enacted.

The estimates that follow, of the employment impact of a higher minimum wage on Missouri's labor market, were performed by Dr. David Macpherson of Trinity University. Dr. Macpherson followed closely the methodology used by the CBO in its 2014 report. Dr. Macpherson also estimates the taxpayer costs of a higher minimum wage, as many state and local public employees will see their earnings increase when the minimum wage rises.

Dr. Macpherson's methodology is presented in detail in a technical appendix.

Estimated Employment Effects of a $10.10 Minimum Wage in Missouri

Statewide, Dr. Macpherson finds that increasing the minimum wage to $10.10 would eliminate over 15,000 jobs—approximately 60 percent of which are jobs held by women. The bulk of the job losses would be concentrated among individuals with a high school degree or less, and among people who work in the retail or leisure & hospitality industries.

(Note: Totals have slight discrepancies due to rounding.)

City-Specific Minimum Wage Employment Impacts

The city of St. Louis has been the subject of a number of protests calling for a higher minimum wage. Dr. Macpherson analyzed the employment impact of a $10.10 minimum wage in the St. Louis metropolitan area, providing breakouts by gender and education where the data permits. He estimates that the wage hike would eliminate approximately 5,000 jobs—just over half of which would be jobs held by women.

Missouri Taxpayer Costs of a $10.10 Minimum Wage

Dr. Macpherson estimates that approximately forty thousand state & local public employees would be affected by a minimum wage increase to $10.10 an hour. These additional wage costs translate to new costs for state and local taxpayers. Following the methodology described in detail in the technical appendix, Dr. Macpherson estimates both the straight wage cost of a $10.10 minimum wage, as well as the total compensation cost with Social Security, Medicare, workers compensation, and unemployment insurance included. Statewide, taxpayers would shoulder an additional $87 million in costs if the base wage was increased to $10.10 an hour and public employees were covered by the new wage.

Missouri Taxpayer Costs of a $10.10 Minimum Wage	
# of State & Local Workers	304,588
# Affected By $10.10 MW	40,103
Annual Wage Cost	$79,629,374
Annual Compensation Cost	$87,004,355

Note: Annual compensation costs include the cost of worker's compensation, FICA, and unemployment insurance benefits.

TECHNICAL APPENDIX

Estimating Employment Loss and the Cost to State and Local Government of an Increase in the Minimum Wage

Dr. David Macpherson
E.M. Stevens Professor of Economics
Trinity University

This paper describes how we estimate the employment loss and the cost to state and local governments of a proposed increase in the minimum wage effective on January 1, 2015.

Data and Sample

First, we use data from the Current Population Survey (CPS) Outgoing Rotation Groups (ORG) from January 2011 through December 2013. For each worker in the sample, we calculate their wage rate. We also adjust the wage rate to reflect a forecast of wages in 2015. This is done in two steps. First, based on legislation enacted as of April 2014, we estimate the minimum wage that would be in effect in January 2015 for each state and city that we consider. If a state or city has an indexed minimum wage, we increase the January 2014 state or city minimum wage by the Congressional Budget Office (CBO) inflation forecast for 2014 of 1.7%.

Since we use data from 2011 through 2013, we also follow the CBO approach for forecasting what the wage distribution would be in 2015. This is done in two steps. First, we adjust wages observed prior to 2013 to reflect 2013 minimum wage legislation. For example, if the minimum wage in a state was $7.25 in 2011 and grew to $8.00 by 2013, anyone who earned between $7.25 and $8.00 in 2011 would have their wage increased to $8.00. After wages are adjusted to 2013 levels, we assume that all wages grow by 2.9% in 2014. Using the resulting 2015 distribution of wages, we adjust for minimum wage legislation that would increase the minimum between 2013 and 2015. Anyone earning a wage between the 2013 and 2015 minimum wage is assigned a wage matching the 2015 minimum wage.

After generating the forecast 2015 distribution of wages reflecting wage growth and existing minimum wage legislation, we identify workers who would be affected by additional changes to the 2015 minimum wage as those with wages between the predicted minimum wage legislated for 2015 (or up to $.25 below it) and the proposed minimum.

To estimate the number of affected workers, we take two steps. First, for each state, we estimate the number of affected workers for 2013. Second, we adjust the weights in the 2011 and 2012 data so that the state-specific number of affected workers implied by the 2011 and 2012 data matches that for 2013. This adjustment is designed to correct for the changing economic climate as the economy recovers from the great recession and to generate estimates that are as close as possible to the most recent data (2013). After we adjust the 2011 and 2012 weights, we estimate the number of affected workers by summing their earnings weights and dividing the total by 36 (the number of months of data).

[1] Also, following CBO, anyone earning up to $.25 less than the 2011 minimum wage would have their wage increased by the amount that the minimum wage increased (i.e. a $7.00 wage would be increased to $7.75 in this example). This approach is used to adjust for the fact that many workers round their answers when asked about their wage.

TECHINCAL APPENDIX CONTINUED

Employment Loss

To estimate employment loss, for each affected worker we compute:

L = e *(Proposed Min Wage /Min Wage 2015 – 1)

where e is an assumed elasticity of employment with respect to changes in the minimum wage, Min Wage 2015 is the minimum wage currently legislated for 2015, and Proposed Min Wage is the minimum wage that is being proposed for 2015. Thus, for example, if a worker is projected to earn the federal minimum of $7.25 in 2015, the expected reduction in employment resulting from a $10.10 minimum wage in 2015 if e=.45 is .45*(10.10/7.25 – 1) = .18. That is, for every 100 workers currently earning the federal minimum, the expectation is that 18 would lose a job if the minimum wage elasticity is .45.

To estimate the aggregate employment loss in the economy, we use earnings weights to sum L across workers. We also follow the Congressional Budget Office (2014) and use an elasticity of 0.15 for non-teenagers and 0.45 for teenagers.

Cost to State and Local Government

We use the same data to estimate the cost to state and local government of a proposed minimum wage hike. We apply the same definition of affected workers described above and estimate the number of state and local government workers affected by a minimum wage hike. We do not, however, assume that there is any job loss for state and local workers as we do not have an appropriate elasticity estimate specific to state and local workers. To the extent that state or local governments reduce hours or employment in response tothe minimum wage hike, our estimate of the cost of the hike would be overstated.

To estimate the increase in annual payroll cost resulting from an increase in the minimum wage, we estimate the increase in annual cost for each worker as:

(Proposed Min Wage-Min Wage 2015)*weekly hours*52

We then multiply the increase in annual cost by the earnings weight for each worker and sum across workers. Since an increase in wages also requires increased employer contributions for Social Security, Medicare, workers' compensation and unemployment insurance, we apply an estimate of the payroll tax rate for these mandatory programs to calculate the additional cost for these programs.

For each state and city considered, we provide tables summarizing the number of affected workers, employment loss, and the distribution of employment loss by sex, education, race, age and industry. Given that we use three years of data, a rule of thumb for minimum sample size required to achieve a reasonably accurate estimate of the employment loss is to require at least 30,000 people be in the relevant category. For example, if there are fewer than 30,000 people projected to be in a particular industry category, the Bureau of Labor Statistics would not report the estimate due to a lack of reliability based on the variance of the estimate relative to its mean.

In addition to the estimate of employment loss, for each state or city considered, we estimate the number of state and local workers that would be affected by the minimum wage hike and the total annual cost to government in terms of wages and total compensation. As with the employment estimates, we advise caution in interpreting estimates that are based on fewer than 30,000 affected workers.

[3] Congressional Budget Office, "The Effects of a Minimum-Wage Increase on Employment and Family Income," February 2014.

[4] For workers paid by the hour the reported hourly wage was used. For workers who are not paid by the hour, we calculate the hourly wage by dividing usual weekly earnings by usual weekly hours. Overtime pay was calculated as time and one-half for hours above 40 hours for hourly workers.

[5] The assumed payroll tax for Medicare and Social Security is 7.65 percent. To estimate the payroll tax for workers' compensation and unemployment insurance, we use unpublished data from the 2010 Employer Cost of Employee Compensation database for state and local workers in the relevant region in 2010.

FISCAL ANALYSIS
OF
PROPOSED STATUTORY INITIATIVE PETITIONS 2012-084 AND 2012-085

Prepared for

Victor Allred versus Robin Carnahan and Thomas Schweich
Circuit Court of Cole County, Missouri

FISCAL ANALYSIS
OF
PROPOSED STATUTORY INITIATIVE PETITIONS 2012-084 AND 2012-085

I. Introduction

This report was undertaken at the request of counsel representing plaintiffs in the case of Victor Allred versus Robin Carnahan and Thomas Schweich. As part of the basis of the lawsuit, the plaintiffs allege that the fiscal note summaries for proposed statutory initiative petitions 2012-084 and 2012-085 are insufficient and unfair. I was asked by counsel to evaluate the fiscal impact of proposed statutory initiative petitions 2012-084 and 2012-085.

The results of my analysis indicate:

(1) labor costs to state and local government entities, based on state auditor fiscal notes, will rise by more than $1,352,182. A more inclusive estimate indicates that state and local government labor costs will increase by $16,003,712;

(2) unemployment benefit costs will rise by $4,397,510 during the first year of the minimum wage increase;

(3) individual income tax revenue will rise by at most $4,078,088;

(4) the loss in corporate income tax revenue could be as high as $9,243,105;

(5) state and local sales tax revenue will rise by at most $2,919,327;

(6) during the first year: state and local governments will incur increased costs of $20,401,222; the change in state and local government revenue will

range from -$2,245,690 to +$6,997,415; and the net state and local government fiscal impact will range from -$22,646,912 to -$13,403,807.

The report is organized as follows. My qualifications to prepare this report are contained in Section II. Section III describes the data and records I relied upon for this report. Section IV reviews the estimated fiscal impact of proposed statutory initiative petitions 2012-084 and 2012-085. A summary and my conclusions are provided in Section VI.

II. Qualifications

I am currently the E.M. Stevens Professor of Economics at Trinity University in San Antonio, Texas. Previously, I was employed by Florida State University as Director of the Pepper Institute on Aging and Public Policy and the Rod and Hope Brim Eminent Scholar in Economics. I have taught both undergraduate and graduate Econometrics (statistical analysis of economic data), and Labor Economics. I have published over 50 articles in peer-reviewed professional journals.

I am currently serving on the editorial board of the *Journal of Forensic Economics*, which is a peer-reviewed journal. I have also served as a reviewer or 'referee' for 24 peer-reviewed journals, including the *Journal of Human Resources, Journal of Labor Economics, Quarterly Journal of Economics,* and the *Review of Economics and Statistics*. Based upon these experiences, I am very familiar with the scholarly and professional research process and the concept of peer review.

I have prepared numerous analyses and reports that use statistical methods as applied to specific questions. I have been responsible for developing the techniques and approaches required for these analyses. I routinely use computers and statistical software packages to assist me in my analytical work. I have been qualified as an expert witness on statistical analysis of employment discrimination and economic damages in state courts in Florida and Georgia and Federal Courts, and I have given expert testimony. I have prepared analyses and offered testimony on behalf of both plaintiffs and defendants.

Details of my qualifications are reflected in my current resume and legal cases, attached as Appendix A to the report.

III. Data and Records

I reviewed the following materials in preparing this report.

- Plaintiff's Complaint
- Material cited in footnotes below.

IV. Fiscal Impact

A. Overview

The proposed statutory initiative petitions 2012-084 and 2012-085 contain many elements in common. Both initiatives would increase the Missouri minimum wage to $8.25 per hour, alter the exemption for retail and service firms, raise the cash wage of tipped workers from 50% to 60% of the minimum wage, and increase the statute of limitation from two to three year for underpayment claims.

The initiatives differ in their linkage to the federal minimum wage. Initiative petition 2012-084 requires that the state minimum wage be automatically increased to the

federal minimum wage if it is higher than the state minimum wage. Initiative petition 2012-085 does not have such a linkage. It only requires that workers be paid the higher of the state minimum wage or the federal minimum wage. The linkage to the federal minimum wage will cause the state minimum wage to be higher under initiative petition 2012-084 over time. This is because the state minimum wage, in contrast to the federal minimum wage, is adjusted for inflation as measured by the Consumer Price Index.

An increase in the minimum wage in Missouri will affect state and local government entities in two ways. First, it will directly increase the cost of labor to state and local government entities. This will occur due to the increase in wages of state and local government workers earning between the existing minimum wage of $7.25 and the new minimum wage of $8.25.[1] In addition, workers laid off due to the minimum wage increase can collect unemployment benefits. The state government will bear the cost of unemployment benefits of these workers for the first 20 weeks. Second, state and local government may gain increased revenue through higher income tax and sales taxes paid by workers affected by the minimum wage who remain employed. However, state and local government will suffer reduced tax revenue to the extent the higher wage cost lowers profits of businesses.

The following sections estimate the cost and revenue effects to state and local government entities of the proposed minimum wage increase.

[1] Information about the minimum wage in Missouri is available at http://www.labor.mo.gov/DLS/minimumwage/.

B. Direct Labor Cost Impact on State and Local Government Budgets

There are two possible ways to measure the direct labor cost on state and local government budgets. First, one can use the information included in the fiscal notes prepared by the State Auditor regarding the proposed initiatives. It is important to note that the fiscal notes provide an incomplete and thus too low estimate of the direct labor cost. The fiscal notes indicate that the Office of Administration's (OA) Division of Personnel reported that as of September 2011 there were 834 state workers who would be affected by an increase of the minimum wage to $8.25 and the "approximate annual cost" would be more than $540,000.

This OA estimate excludes seasonal workers such as State Fair employees, State Parks Employees, and tax season staff. The Division of Revenue noted its labor cost would rise by $40,000. The Division of Natural Resources stated they have over 500 workers who would be affected by the increase, but did not provide an estimate of the cost. The State Fair hired 745 workers that would be affected, but no cost estimate was provided.

Thus, the cost to state government, based on the fiscal notes, would be more than $580,000.

The fiscal notes also provide an incomplete and thus too low measure of the cost to local government and public educational institutions. Many cities and educational institutions did not respond to Office of Auditor's survey or provide an estimate of the cost of the higher minimum wage. The City of Columbia, City of Jefferson, City of

Joseph, Linn State Technical College, and Metropolitan Community College did provide such an estimate. The total cost to these five institutions is $772,182.

Based on the fiscal notes, the cost to state and local government entities of the increase in the minimum wage to $8.25 will be more than $1,352,182.

Second, data from the U.S. Census Bureau's Current Population Survey (CPS) can also be used to calculate the cost of the increased labor cost to state and local government entities in Missouri. Using the data from January 2010 to December 2011 Outgoing Rotation Group (ORG) CPS, I calculated that 17,089 state and local government workers would be affected by the minimum wage increase. I defined affected workers as those individuals earning between $7.00 and $8.24 per hour. Though the minimum wage was $7.25 per hour during this period, I also included those workers reporting earnings of $7.00 to $7.24 since some individuals may round their wage rate. I calculated the annual wage cost for each state and local government worker (i) in the ORG CPS as:

$$Annual\ Wage\ Cost_i = (\$8.25 - current\ wage_i) * weekly\ hours_i * 52.$$[2]

The average annual wage cost increase was $870. I summed the cost over each worker (i) to obtain the total wage cost to state and local government entities in Missouri of $14,866,430.

The increased wage cost is not the only labor cost to state and local government entities of the minimum wage increase. Employers are required to pay 7.65% of their wage costs in Social Security and Medicare taxes. Thus, the total labor cost of the minimum wage increase will be 1.0765 times $14,866,430 or $16,003,712.

---

[2] I assume that persons reporting an hourly wage rate between $7.00 and $7.24 are actually earning $7.25 per hour.

C. Unemployment Benefit Impact

The higher minimum wage will cause firms to reduce their level of employment.[3] As a result, the number of unemployed workers will increase. Thus, another important fiscal cost of the minimum wage increase is the cost of the unemployment insurance benefits for the workers laid off as a result of the minimum wage increase.

To calculate the cost to the unemployment benefits program, I first calculated the number of workers laid off. To do so, I calculated a probability of job loss for each affected Missouri worker (i) in the January 2010 to December 2011 ORG CPS:

$$Probability\ Job\ Loss_{\ i} = \frac{(\$8.25 - Current\ Wage_i)}{Current\ Wage_i} * elasticity_i.$$

I used the preferred employment elasticity (i.e., sensitivity of employment to wage changes) contained in Sabia and Burkhauser (2010), which was -0.6 for individuals aged 16 to 29 without a high school degree and -0.2 for all other individuals. The sole exception was for state and local government workers, where I assumed an elasticity of zero.[4] The sum across all affected workers yielded an estimated job loss of 5,745 jobs.

The next step was to calculate the weekly benefit for the average unemployed worker. Using the benefits calculator on the Missouri unemployment benefits web site and the wage income of average private-sector affected worker ($10,937), yields an average weekly benefit of $109.36[5]. The state of Missouri pays the first 20 weeks of benefits.[6] Thus, each eligible unemployed worker could receive a total of $2,187.20 in

---

[3] For a survey of research regarding the effect of the minimum wage on employment, see David Neumark and William L. Wascher, *Minimum Wages* (Cambridge, MA: MIT Press, 2008).
[4] Joseph J. Sabia and Richard V. Burkhauser, "Minimum Wages and Poverty: Will a $9.50 Federal Minimum Wage Really Help the Working Poor?" *Southern Economic Journal* (January 2010): 592-623.
[5] http://www.labor.mo.gov/DES/Claims/calculator.asp
[6] See http://www.labor.mo.gov/DES/Claims/

benefits paid for by the state of Missouri. These jobs are permanently eliminated and so it is appropriate to calculate the full amount of benefits for each worker.

Unemployment insurance, however, does not cover all unemployed workers. For example, it does not cover people who leave a job voluntarily, people looking for their first job, and re-entrants who previously left the labor force voluntarily. Furthermore, some individuals don't apply for benefits even though they are eligible. I assume that 35% of the unemployed workers will receive unemployment benefits based on analysis by Wenger (2001).[7]

The last step is to calculate the total cost to the Missouri unemployment benefits program. This done by multiplying the number of jobs lost (5,745) times the average benefit amount ($2,187.20) times the percent of unemployed individuals collecting benefits (35%). This calculation yields a figure of $4,397,510. This cost would be borne only during the first year of the minimum wage increase. The inflation adjustments in the minimum wage will also yield costs to the unemployment insurance program, but it is not possible to estimate the amount.

D. Impact on State Income Tax Revenue

The state of Missouri will gain increased revenue through higher income tax taxes paid by workers affected by the minimum wage who remain employed. However, it will

[7] Jeffery Wenger. "Divided We Fall: Deserving Workers Slip through America's Patchwork Unemployment Insurance System." *Economic Policy Institute*, 2001. Sabia and Burkhauser (2010) make the same assumption in their calculation of the amount of unemployment benefits generated by a minimum wage increase.

suffer reduced corporate income tax revenue to the extent the higher wage cost lowers profits of businesses.

To calculate the impact on individual income tax revenue, I again used data from January 2010 to December 2011 ORG CPS. I defined affected workers as those Missouri individuals earning between $7.00 and $8.24 per hour.[8] I used the following formula to estimate the change in income tax revenue:

$$\Delta Tax\ Revenue_i = (Tax_After_i - Tax_Before_i) - Prob_Job_Loss_i * Tax_Before_i,$$

where Tax_After_i is the income tax paid by worker i after the minimum wage increase. Tax_Before_i is the income tax paid by worker i after the minimum wage increase, and $Prob_Job_Loss_i$ is the probability of job loss for worker i. The first term shows the change in individual income tax revenue assuming no job loss and the second term shows the loss in tax revenue due to the employment loss caused by the minimum wage increase.

The income tax calculations were based on two assumptions.[9] First, the 50% percent of affected workers who were under the age 25 who were assumed to be dependents on another person's tax return. As a result, it was assumed that the affected workers' earnings were taxable at the maximum Missouri income tax rate of 6% both and after the minimum wage increase.[10] Second, all persons age 25 and older were assumed to be paying little or no income tax after exemptions and deductions. Thus, about 50% of the earnings increase will be taxed at a rate of 6%.

---

[8] I again assume that persons reporting an hourly wage rate between $7.00 and $7.24 are actually earning $7.25 per hour. The annual earnings level was calculated as the worker's wage rate times usual weekly hours worked times 52.

[9] The same assumptions are used in the State Auditor's fiscal notes for the initiatives.

[10] This assumption will overstate the revenue increase as 20% of affected workers under the age 25 are living by themselves and some of these individuals will not be a dependent on another person's tax return.

The tax calculations reveal an increase in income tax revenue increase to the state. Assuming no workers were laid off by the minimum wage increase, income tax revenue would rise by $6,043,534. However, the state will lose $1,965,446 in income tax revenue due to the lost earnings of private-sector workers no longer employed due to the minimum wage hike.[11] Thus, the net increase in individual income tax revenue is $4,078,088.

Businesses have three options to respond to the higher labor costs of a higher minimum wage. They can reduce their profits, raise prices, or lay off workers. Based on the 2010-2011 ORG CPS data, the minimum wage increase will raise private-sector labor costs by $192,620,900 if employment levels are not reduced. However, labor costs will be lowered by $55,240,790 due to the reduction in employment. Thus, labor costs will, on net, rise by $137,380,110. These increased labor costs may be either passed on to consumers through higher prices or reduced profits or more likely some combination of higher prices and reduced profits. Assuming that businesses absorbed all of the higher costs through reduced profits, the corporate income tax revenue would fall by the Missouri corporate income tax of 6.25% times the rise in labor costs of $137,380,110 * 1.0765 (to account for employer-paid Social Security and Medicare taxes) or $9,243,106.[12] Alternatively, if half of the higher labor costs were passed on to consumers, then corporate income tax revenue would fall by $4,621,553.

[11] The probability of job loss was calculated in the same manner as in the prior section.
[12] The corporate income tax for Missouri is available at: http://dor.mo.gov/business/corporate/

E. Impact on State and Local Sales Tax Revenue

To calculate the impact on state and local sales tax revenue the following approach was undertaken.[13] First, the total increase in worker earnings, adjusted for employment reductions, was calculated using the 2010-2011 ORG CPS. This figure was $152,246,540. Second, the increase in Missouri taxable sales was calculated as 25% of the earnings increase or $38,061,635. Third, the increase in sales tax revenue was calculated by multiplying the taxable sales change times the average state and local rate of 7.67% or $2,919,327.[14]

The higher minimum wage may decrease sales tax revenue to the extent that it reduces business profits, which will lower spending by business owners.

VI. Summary and Conclusions

I was asked by counsel to evaluate the fiscal impact of proposed statutory initiative petitions 2012-084 and 2012-085.

The results of my analysis indicate:

(1) labor costs to state and local government entities, based on state auditor fiscal notes, will rise by more than $1,352,182. A more inclusive estimate indicates that state and local government labor costs will increase by $16,003,712;

[13] The same general approach is used in the State Auditor's fiscal notes for the initiatives.
[14] The average rate comes from http://taxfoundation.org/news/show/27023.html

(2) unemployment benefit costs will rise by $4,397,510 during the first year of the minimum wage increase;

(3) individual income tax revenue will rise by at most $4,078,088;

(4) the loss in corporate income tax revenue could be as high as $9,243,105;

(5) state and local sales tax revenue will rise by at most $2,919,327;

(6) during the first year: state and local governments will incur increased costs of $20,401,222; the change in state and local government revenue will range from -$2,245,690 to +$6,997,415; and the net state and local government fiscal impact will range from -$22,646,912 to -$13,403,807.

Miami University Faculty Research Grant, 6/1989-8/1989, $4,000, "Declining Unionism and the Gender Wage Gap," with William Even.

Participation in National Meetings

Panel Discussant, American Real Estate and Urban Economics Association/ASSA meetings, January 2008.

Presented, "Employee Turnover in the Long-Term Care Industry," at Academy Health Annual Research Meetings, June 2007.

Presented, "Participant Direction in Defined Contribution Pension Plans," at International Atlantic Economic Society meetings, October 2006.

Presented, "The Risk and Return of Pension Investments in Employer Stock," at International Atlantic Economic Society meetings, October 2005.

Presented, "Replacing Earnings After Termination: Evidence from the Displaced Worker Survey," at the Allied Social Science Association/National Association of Forensic Economics, January 2002.

Presented, "Labor Market Transitions of Older Workers," at the Allied Social Science Association/Society of Government Economists meetings, January 1999.

Presented, "Why has the Loss in Pension Coverage Accelerated Among Less Educated Workers?" at the American Economic Association Meetings, 1995.

Presented, "Wages and Gender Composition: Why Do Women's Jobs Pay Less?" at the American Economic Association Meetings, 1994, with Barry Hirsch.

Presented, "Pensions, Labor Turnover, and Employer Size" at the American Economic Association Meetings, 1993, with William Even.

Presented, "Why Did Male Pension Coverage Decline in the 1980s?" at the American Economic Association meetings, 1992, with William Even.

Participation in Regional Meetings

Presented "Unions and Pension Performance: The Role of Pension Design," at Southern Economics Association meetings, November 2009.

Panel member, "Recent Federal Reserve Policy: An Evaluation" at Southern Economics Association meetings, November 2009.

Discussant, "Topics in Health Economics," at Southern Economics Association meetings, November 2009.

Discussant, "Teacher Pay, Principals, and Schooling," at Southern Economics Association meetings, November 2009.

Presented "Is Bigger Still Better?: The Decline of the Wage Premium at Large Firms," at Western Economic Association meetings, July 2009.

Presented "Is Bigger Still Better?: The Decline of the Wage Premium at Large Firms," at Eastern Economic Association meetings, February 2009.

Panel Discussant at the Southern Economic Association meetings, November 2008.

Presented "Is Bigger Still Better?: The Decline of the Wage Premium at Large Firms," at Southern Economic Association meetings, November 2008.

Presented "The Growth of Participant Direction in Defined Contribution Pensions," at Western Economic Association meetings, July 2008.

Chair "Pensions and Retirement" Session at Southern Economic Association meetings, November 2007.

Presented "The Growth of Participant Direction in Defined Contribution Pensions," at Southern Economic Association meetings, November 2007.

Presented, "Participant Direction in Defined Contribution Pension Plans," at Southern Economic Association meetings, November 2006.

Panel Discussant, Southern Economic Association meetings, November 2005.

Presented, "Do Pensions Impede Phased Retirement?" at the Southern Economic Association meetings, November 2004.

Presented, "When Will the Gender Gap in Retirement Income Narrow?" at the Southern Economic Association meetings, November 2003.

Presented, "How Will the Growth of DC and 401(k) Plans Affect Pension Income?" at the Southern Economic Association meetings, November 2002.

Presented, "Racial Composition, Wages, and Quality Sorting," at the Southern Economic Association meetings, November 1999.

Presented, "Racial and Ethnic Differences in Pension Coverage and Benefit Levels," at the Southern Economic Association meetings, November 1998.

Presented, "Factors Influencing Participation and Contribution Levels in 401(k) Plans," at the Western Economics Association meetings, July 1998.

Presented, "Aging at Work: Employment Determination, Firm Strategies, and Public Policy in the United States," at the Western Economic Association meetings, July 1994.

Presented, "Why Did Male Pension Coverage Decline in the 1980s?" at the Western Economic Association meetings, July 1992.

Presented "Plant Size and the Decline of Unionism," at the Southern Economic Association meetings, 1989, with William Even.

Panel Discussant, Southern Economic Association meetings, November 1989.

Presented "The Labor Force Participation and Earnings Profiles of Married Female Immigrants," at the Southern Economic Association meetings, November 1988.

Presented "Pensions, Screening, and the Gender Wage Gap," at the Southern Economic Association meetings, November 1988.

Session Chair and Panel Discussant at the Southern Economic Association meetings, November 1988.

Participation in Invited Seminars, Conferences, and other Presentations

Presented, "Teaching Macroeconomics During Troubled Times," at Creative Ideas for Your Basic Economics Course Conference at Florida State University, February 2012.

Presented, "Participant Direction in Defined Contribution Pension Plans," at Pennsylvania State University, April 2010.

Presented, "The Parallels Between the Japanese Economic Crisis of the 1990s and the US Today" at Creative Ideas for Your Basic Economics Course Conference at Florida State University, February 2010.

Chair "Minimum Wage & EITC" Session at Society of Labor Economists meetings, May 2009.

Presented "Participant Direction in Defined Contribution Plans," at Lehigh University, April 2009.

Presented "Is Bigger Still Better?: The Decline of the Wage Premium at Large Firms," at Association of Private Enterprise Education meetings, April 2009.

Presented "The Growth of Participant Direction in Defined Contribution Pensions," at Trinity University, October 2008.

Presented "The Growth of Participant Direction in Defined Contribution Pensions," at Georgia State University, April 2008.

Presented "The Growth of Participant Direction in Defined Contribution Pensions," at Association of Private Enterprise Education meetings, April 2008.
Presented, "Improving Pension Coverage at Small Firms," at Hudson Institute, May 2006.

Presented, "Participant Direction in Defined Contribution Plans," at Society of Labor Economics meetings, May 2006.

Presented, "Participant Direction in Defined Contribution Plans," at Association of Private Enterprise Education meetings, April 2006.

Presented, "Participant Direction in Defined Contribution Plans," at University of Wisconsin-Milwaukee, April 2006.

Invited Panel Participant for Pepper Foundation and Center Symposium on pension reform, Washington, DC, February 2006.

Presented, "The Risk and Return of Pension Investments in Employer Stock," at West Virginia University, April 2005.

Presented, "The Risk and Return of Pension Investments in Employer Stock," at the University of Kentucky, November 2004.

Presented, "The Causes and Consequences of Company Stock Holdings in Pension Funds," at the Federal Reserve Bank of Atlanta, April 2004.

Presented, "The Causes and Consequences of Company Stock Holdings in Pension Funds," at the University of Oklahoma, February 2004.

Presented, "Tracking Union and Nonunion Wages in the U.S.: Can the Evidence be Reconciled?" at the Middlebury Annual Conference on Economic Issues, April 2002.

Presented, "How Will the Growth of DC and 401(k) Plans Affect Pension Income?" at the Miami University Center for Pension and Retirement Research Conference, June 2001.

Presented, "Benefits and Worker Productivity," Benefits for the Workplace of Tomorrow Conference, Wharton School, University of Pennsylvania, May 2001.

Participant, Innovations in Managing the Financial Risks of Retirement Conference, Wharton School, University of Pennsylvania, May 2000.

Presented "Using Hi-Tech in Large Lectures," at Association of Private Enterprise Education meetings, April 2000.

Presented "Employee Participation in 401(k) Plans," at University of Wisconsin-Milwaukee, October 1999.

Presented "Gender, Race, and Ethnicity in the Labor Market," as part of the Smith Chair course in Labor Economics at Brigham Young University, September 1999.

Presented, "The Decline in Pension Coverage Among Less Educated Workers," at the Florida State University Economics Department Seminar Series, 1996.

Presented, "Children's Effects on Women's Labor Market Attachment and Earnings" at the Conference on the Changes in Working Time in Canada and the United States, Canadian Employment Research Forum, 1996.

Presented, "Earnings, Rents, and Competition in the Airline Labor Market" at the Ohio State University Economics Department Seminar Series, 1996.

Presented, "Earnings, Rents, and Competition in the Airline Labor Market" at the Florida State University Economics Department Seminar Series, 1995.

Presented, "Employer Size and Labor Turnover: The Role of Pensions," at Syracuse University, 1995.

Presented, "Earnings, Rents, and Competition in the Airline Labor Market" while visiting scholar at the Federal Reserve Bank of Cleveland, 1995.

Presented, "Trends in Individual and Household Pension Coverage," at the Miami University Center for Pension and Retirement Research Conference, 1994.

Presented, "Racial Composition, Quality Sorting, and the Black-White Wage Gap" at the University of Wisconsin, Institute for Research on Poverty, Small Grants Workshop, 1993, with Barry Hirsch.

Presented, "Why Did Male Pension Coverage Decline in the 1980s?" at the Florida State University Economics Department Seminar Series, 1992.

Participant at National Bureau of Economic Research (NBER) Labor Studies meetings of the Summer Institute, 1992.

Presented, "Why Did Male Pension Coverage Decline in the 1980s?" at the Miami University Conference on Current Pension Policy Issues, 1992.

Organizer and participant at conference on "Contemporary Issues in Pension Economics," hosted by the Center for Pension and Retirement Research, Miami University, 1990.

Presented "The Effect of International Competition on Union and Nonunion Wages," at the University of Cincinnati Seminar Series, 1987.

The State Auditor's office did not receive a response from the **Department of Elementary and Secondary Education, Adair County, Boone County, Callaway County, Cass County, Clay County, Cole County, Jackson County, Jasper County, St. Charles County, St. Louis County, Taney County,** the **City of Cape Girardeau,** the **City of Columbia,** the **City of Jefferson,** the **City of Joplin,** the **City of Kirksville,** the **City of Mexico,** the **City of St. Joseph,** the **City of St. Louis,** the **City of Springfield,** the **City of Union,** the **City of Wentzville,** the **City of West Plains, Cape Girardeau 63 School District, Hannibal 60 School District, State Technical College of Missouri, Metropolitan Community College,** and **St. Louis Community College, Harris-Stowe State University, Lincoln University, Northwest Missouri State University, Southeast Missouri State University, Truman State University, Kansas City Board of Police Commissioners, The Metropolitan Police Department - City of St. Louis,** the **St. Louis County Board of Elections,** the **Board of Election Commissioners City of St. Louis,** and the **Clay County Board of Election Commissioners.**

Fiscal Note Summary

State and local governments estimate no direct costs or savings from the proposal, but operating costs could increase by an unknown annual amount that could be significant. State and local government tax revenue could change by an unknown annual amount ranging from a $2.9 million decrease to a $214 million increase depending on business decisions.

STATE AUDITORS OFFICE

The Honorable Nicole Galloway
State Auditor
State Capitol Building
Jefferson City, MO 65101

RE: Petition approval request from Richard Von Glahn regarding a proposed statutory amendment to Chapter 290, Version 10 (2018-205)

Dear Auditor Galloway:

Enclosed please find an initiative petition sample sheet for a proposal to amend the Revised Statutes of Missouri filed by Richard Von Glahn on April 3, 2017.

We are referring the enclosed petition sample sheet to you for the purposes of preparing a fiscal note and fiscal note summary as required by Section 116.332, RSMo. Section 116.175.2, RSMo requires the state auditor to forward the fiscal note and fiscal note summary to the attorney general within twenty days of receipt of the petition sample sheet.

Thank you for your immediate consideration of this request.

Sincerely,

John R. Ashcroft

Be it enacted by the people of the state of Missouri:

Section 290.502 of the Revised Statutes of Missouri is amended and a new section to be known as section 290.529 is enacted to read as follows:

290.502. 1. Except as may be otherwise provided pursuant to sections 290.500 to 290.530, effective January 1, 2007, every employer shall pay to each employee wages at the rate of $6.50 per hour, or wages at the same rate or rates set under the provisions of federal law as the prevailing federal minimum wage applicable to those covered jobs in interstate commerce, whichever rate per hour is higher.

2. The minimum wage shall be increased or decreased on January 1, 2008, and on January 1 of successive years, by the increase or decrease in the cost of living. On September 30, 2007, and on each September 30 of each successive year, the director shall measure the increase or decrease in the cost of living by the percentage increase or decrease as of the preceding July over the level as of July of the immediately preceding year of the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) or successor index as published by the U.S. Department of Labor or its successor agency, with the amount of the minimum wage increase or decrease rounded to the nearest five cents.

3. Except as may be otherwise provided pursuant to sections 290.500 to 290.530, and notwithstanding subsection (1) of this section, effective January 1, 2019, every employer shall pay to each employee wages at the rate of not less than $8.60 per hour, or wages at the same rate or rates set under the provisions of federal law as the prevailing federal minimum wage applicable to those covered jobs in interstate commerce, whichever rate per hour is higher. Thereafter, the minimum wage established by this subsection shall be increased each year by $.85 per hour, effective January 1 of each of the next four years, until it reaches $12.00 per hour, effective January 1, 2023. Thereafter, the minimum wage established by this subsection shall be increased or decreased on January 1, 2024, and on January 1 of successive years, per the method set forth in subsection (2) of this section. If at any time the federal minimum wage rate is above or is thereafter increased above the minimum wage then in effect under this subsection, the minimum wage required by this subsection shall continue to be increased pursuant to this subsection (3), but the higher federal rate shall immediately become the minimum wage required by this subsection and shall be increased or decreased per the method set forth in subsection (2) for so long as it remains higher than the state minimum wage required and increased pursuant to this subsection.

4. For purposes of this section, the term "public employer" means an employer that is the state or a political subdivision of the state, including a department, agency, officer, bureau, division, board, commission, or instrumentality of the state, or a city, county, town, village, school district, or other political subdivision of the state. Subsection (3) of this section shall not apply to a public employer with respect to its employees. Any public employer that is subject to subsections (1) and (2) of this section shall continue to be subject to those subsections.

290.529. Except in the circumstances set forth in section 290.523, all the provisions of sections 290.500 to 290.530 are severable. If any provision, including any section, subsection, subdivision, paragraph, sentence, or clause, of sections 290.500 to 290.530, or the application thereof to any person or circumstance, is found by a court of competent jurisdiction to be invalid, unconstitutional, or unconstitutionally enacted, such decision shall not affect other provisions or applications of sections 290.500 to 290.530 that can be given effect without the invalid, unconstitutional, or unconstitutionally enacted provision or application.

MISSOURI STATE AUDITOR'S OFFICE
FISCAL NOTE (18-205)

Subject

Initiative petition from Richard Von Glahn regarding a proposed amendment to Chapter 290 of the Revised Statutes of Missouri. (Received April 4, 2017)

Date

April 24, 2017

Description

This proposal would amend Chapter 290 of the Revised Statutes of Missouri.

The amendment is to be voted on in November 2018.

Public comments and other input

The State Auditor's office requested input from the **Attorney General's office,** the **Department of Agriculture,** the **Department of Economic Development,** the **Department of Elementary and Secondary Education,** the **Department of Higher Education,** the **Department of Health and Senior Services,** the **Department of Insurance, Financial Institutions and Professional Registration,** the **Department of Mental Health,** the **Department of Natural Resources,** the **Department of Corrections,** the **Department of Labor and Industrial Relations,** the **Department of Revenue,** the **Department of Public Safety,** the **Department of Social Services,** the **Governor's office,** the **Missouri House of Representatives,** the **Department of Conservation,** the **Department of Transportation,** the **Office of Administration,** the **Office of State Courts Administrator,** the **Missouri Senate,** the **Secretary of State's office,** the **Office of the State Public Defender,** the **State Treasurer's office, Adair County, Boone County, Callaway County, Cass County, Clay County, Cole County, Greene County, Jackson County, Jasper County, St. Charles County, St. Louis County, Taney County,** the **City of Cape Girardeau,** the **City of Columbia,** the **City of Jefferson,** the **City of Joplin,** the **City of Kansas City,** the **City of Kirksville,** the **City of Mexico,** the **City of Raymore,** the **City of St. Joseph,** the **City of St. Louis,** the **City of Springfield,** the **City of Union,** the **City of Wentzville,** the **City of West Plains, Cape Girardeau 63 School District, Hannibal 60 School District, State Technical College of Missouri, Metropolitan Community College, University of Missouri, St. Louis Community College, University of Central Missouri, Harris-Stowe State University, Lincoln University, Missouri State University, Missouri Southern State University, Missouri Western State University, Northwest Missouri State University, Southeast Missouri State University, Truman State University, Kansas City Board of Police Commissioners, The Metropolitan Police Department - City of St. Louis,** the **St. Louis County Board of Elections,** the **Board of Election**

Commissioners City of St. Louis, the **Kansas City Board of Election Commissioners,** the **Platte County Board of Elections,** the **Jackson County Election Board,** and the **Clay County Board of Election Commissioners**.

Lara Granich and **Missouri Jobs with Justice Voter Action** provided information as proponents of the proposal to the State Auditor's office.

Robert Bonney, Chief Executive Officer of the Missouri Restaurant Association provided information as an opponent of the proposal to the State Auditor's office.

Assumptions

Officials from the **Attorney General's office** indicated they expect that, to the extent that the enactment of this proposal would result in increased litigation, they can absorb the costs associated with that increased litigation using existing resources. However, if the enactment of this proposal were to result in substantial additional litigation, they may request additional appropriations. They do not expect that the enactment of this proposal would result in any other increased costs to their office.

Officials from the **Department of Agriculture** indicated there is no fiscal impact to their department for this initiative petition.

Officials from the **Department of Economic Development** indicated no impact to their department.

Officials from the **Department of Higher Education** indicated this initiative petition would not have a fiscal impact on their department since public employers are exempt from the new provisions proposed.

Officials from the **Department of Health and Senior Services** indicated this proposal would have no direct fiscal impact on their department since government employees are exempt from its provisions. However, employees of certain entities that receive funding through the department's budget would be impacted, such as Medicaid Home and Community Based Services vendors/providers and Area Agencies on Aging.

Officials from the **Department of Insurance, Financial Institutions and Professional Registration** indicated this petition, if passed, will have no cost or savings to their department.

Officials from the **Department of Mental Health** indicated this proposal creates no direct obligations or requirements to their department that would result in a fiscal impact.

Officials from the **Department of Natural Resources** indicated their department defers to the Office of Administration to determine the fiscal impact of this proposal.

Officials from the **Department of Corrections** indicated they defer to the Office of Administration.

Officials from the **Department of Labor and Industrial Relations** indicated no fiscal impact on their department.

Officials from the **Department of Revenue** indicated this petition will have no fiscal impact on their department. Their department defers to the Office of Administration for a state impact.

Officials from the **Department of Public Safety - Office of the Director** indicated they will defer to the response provided for this initiative petition by the Office of Administration - Human Resources.

Officials from the **Department of Social Services** indicated no fiscal impact on their department. They defer to the Office of Administration.

Officials from the **Governor's office** indicated there should be no added cost or savings to their office.

Officials from the **Missouri House of Representatives** indicated no fiscal impact to their office.

Officials from the **Department of Conservation** indicated that no adverse fiscal impact to their department would be expected as a result of this proposal.

Officials from the **Department of Transportation** indicated unknown fiscal impact.

Officials from the **Office of Administration** indicated the proposal amends Section 290.502 and adds Section 290.529, RSMo.

Section 290.502, RSMo, increases the minimum wage to $8.60 per hour, beginning January 1, 2019 and by another $0.85 per hour each year until it reaches $12.00 per hour beginning January 1, 2023. Thereafter, the minimum wage will be adjusted annually based on the increase/decrease in the cost of living.

The proposal exempts public employers from the requirements; therefore, there would be no cost to the State of Missouri.

Because no tax rates are affected, there is no direct impact on general and total state revenues. However, these proposals may have several indirect affects, which could impact revenue collections by an unknown amount, including but not limited to:

- Increased wages for certain employees. According to the US BLS, in 2015, Missouri had 57,000 hourly employees earning wages at or below the federal minimum wage;[1]
- Increased consumption by those employees;
- Lower overall employment (if employers choose to hold costs steady);

[1] http://www.bls.gov/opub/reports/minimum-wage/2015/home.htm

- Lower business investment (if employers' payrolls increase);
- Increased prices as firms pass–through labor costs.

This proposal should not impact their office.

Officials from the **Office of State Courts Administrator** indicated there is no fiscal impact on the courts.

Officials from the **Missouri Senate** indicated no fiscal impact on their office.

Officials from the **Secretary of State's office** indicated their office is required to pay for publishing in local newspapers the full text of each statewide ballot measure as directed by Article XII, Section 2(b) of the Missouri Constitution and Section 116.230-116.290, RSMo. Their office is provided with core funding to handle a certain amount of normal activity resulting from each year's legislative session. Funding for this item is adjusted each year depending upon the election cycle with $1.3 million historically appropriated in odd numbered fiscal years and $100,000 appropriated in even numbered fiscal years to meet these requirements. Through FY (fiscal year) 2013, the appropriation had historically been an estimated appropriation because the final cost is dependent upon the number of ballot measures approved by the General Assembly and the initiative petitions certified for the ballot. In FY 2015, the General Assembly changed the appropriation so that it was no longer an estimated appropriation. In FY 2017 their office was appropriated $2.6 million to publish the full text of the measures. In FY 2017, at the August and November elections, there were 6 statewide Constitutional Amendments or ballot propositions that cost $2.4 million to publish (an average of $400,000 per issue). Their office will continue to assume, for the purposes of this fiscal note, that it should have the full appropriation authority it needs to meet the publishing requirements. Because these requirements are mandatory, they reserve the right to request funding to meet the cost of their publishing requirements if the Governor and the General Assembly again change the amount or continue to not designate it as an estimated appropriation.

Officials from the **Office of the State Public Defender** indicated this initiative petition will not have any significant impact on their office.

Officials from the **State Treasurer's office** indicated they do not predict an immediate fiscal impact upon their office if Missouri's minimum wage rate were increased to $12.00 per hour. However, the potential future impact of applying cost of living increases and/or increases in the federal minimum wage to a Missouri minimum wage of $12.00 per hour, as called for elsewhere in Section 290.502, RSMo., is unknown.

Officials from **Greene County** indicated there are no estimated costs or savings to report from their county for this initiative petition.

Officials from the **City of Kansas City** indicated this petition may have a small negative fiscal impact on their city as a result of the increased hourly minimum wage being higher than the hourly rate paid some city employees.

Officials from the **City of Raymore** indicated no fiscal impact.

Officials from **University of Missouri** indicated they are not able to estimate any significant financial impact on their university.

Officials from **University of Central Missouri** indicated they estimate no fiscal impact since they are excluded under the public employer definition in section 4.

Officials from the **Missouri State University** indicated no fiscal impact.

Officials from **Missouri Southern State University** indicated they do not anticipate any fiscal impact from this initiative petition.

Officials from **Missouri Western State University** indicated the wording is unclear as to whether Colleges/Universities are included in this petition. In assuming they are included, they calculate the following significant fiscal impact to their university. The proposal will have a severe negative impact on the university. The proposed minimum wages increases beginning in 2019 at $8.60 per hour; with .85 increases for the next four years, 2023 @ $12.00 an hour, they project the overall increase in payroll expenditures to be in access of $200,000.00 in 2019 and more than $1,000,000.00 by 2023; resulting in the severe negative fiscal impact.

Officials from the **Kansas City Board of Election Commissioners** indicated no fiscal effect on their operations.

Officials from the **Platte County Board of Elections** indicated no fiscal impact.

Officials from the **Jackson County Election Board** indicated this petition does not have a fiscal impact on their office.

Lara Granich and **Missouri Jobs with Justice Voter Action** provided the following information as proponents of this initiative petition.

This letter is from Lara Granich and Missouri Jobs with Justice Voter Action, proponents of the above-referenced Minimum Wage Initiative Petitions. Pursuant to RSMo. Section 116.175, we write to submit the following fiscal impact information to assist your office in its analysis of the fiscal impact of the above-mentioned seven proposed Minimum Wage Initiative Petitions.

Our analysis estimates the impact of the proposed Minimum Wage Initiative Petitions on state and local sales and personal income tax revenue in Missouri. We follow the process that has been used in the past to estimate the impact of minimum initiative petitions on state and local sales and personal income tax revenue, with some refinements. We also address certain claims that have been made by opponents of similar initiative petitions in the past.

As these petitions exclude public workers from the proposed minimum wage increases, we do not include in our analysis an estimate of the impact on state and local payroll costs of the proposed Minimum Wage Initiative Petitions.

I. Estimate of Number of Workers Affected Statewide and the Impact on Their Wages

Table 1. Summary of the Number of Affected Workers and Aggregate Wage Increases for Missouri in the Final Year of Minimum Wage Implementation.

Proposal	Year of Peak Minimum Wage (MW)	Proposed Peak MW	Tipped MW in Peak MW Year	Workers Affected by MW increase	Aggregate Annual Wage Increase in Nominal Dollars
13,14,15[a]	2023	$ 12.00	$ 6.00	835,350	$4,358,798,129
16,17,18[a]	2024	$ 12.00	$ 6.00	819,652	$4,209,438,048
19,20,21[a]	2025	$ 13.00	$ 6.50	900,788	$5,309,336,662
22,23,24[a]	2022	$ 11.00	$ 5.50	738,515	$3,347,138,756
25	2021	$ 11.00	$ 5.50	761,164	$3,469,534,559
26	2022	$ 12.00	$ 6.00	852,284	$4,510,285,824
27	2023	$ 13.00	$ 6.50	949,801	$5,667,065,534
28	2024	$ 12.00	$ 9.60	832,328	$4,288,614,460
29	2025	$ 13.00	$ 7.80	905,942	$5,332,471,496
30	2022	$ 12.00	$ 8.40	864,090	$4,558,317,729
31	2022	$ 12.00	$ 6.84	855,887	$4,523,341,931

32	2023	$ 13.00	$ 9.75	948,421	$5,745,051,956
33	2023	$ 13.00	$ 7.54	942,566	$5,685,951,766

Notes: Author's Analysis of American Community Survey (ACS) Data from 2014.
(a) Since these proposals only vary on non-economic factors, their economic and fiscal impacts are treated as equal for the purposes of this report.

Across the proposals analyzed, the total aggregate wage increase for workers in Missouri ranges from a low of $3.347 billion (Proposals 22-24) to a high of $5.745 billion under Proposal 32. While some proposals have the same final impact numbers, they have different impacts in the initial years (not listed) based on the relative pace of increases in earlier years. A full, year-by-year impact analysis is presented in Appendix Tables A1 through A13 below.

The wage impact of an increase in the minimum wage for the state of Missouri is calculated using the following procedure. The American Community Survey (ACS) Public Use Micro Sample for the most recent year available (2014) for the state of Missouri was downloaded from the US Census Bureau. The American Community Survey was chosen over the Current Population survey because the ACS has a significantly larger sample. We followed the method of Perry, Thomason, and Bernhardt (2016) for calculating an hourly wage rate from the ACS based on observed total annual wage income, typical hours worked each week and weeks worked per year. Since ACS income figures are clustered around whole-numbers, we smoothed the wage distribution by randomly adding or subtracting $0.25 from each wage figure.

Wage adjustments were made only for those individuals earning less than the proposed minimum wage, or proposed tipped minimum wage. We did not make additional adjustments for the "ripple effect" of minimum wage increases on workers earning slightly above the new threshold. Recent evidence suggests that workers earning up to 15 percent above of the minimum wage also receive small increases in response to a minimum wage increase. (See Wicks-Lim (2006) and Dube, Giuliano and Leonard (2015).) Thus, the estimated impacts listed above are likely to be smaller than the actual impact of increasing the minimum wage to the proposed level.

The proposed minimum wage increases exclude public employees. However, it was not practicable to exclude public employees from these calculations because the ACS does not have a published variable that allows for identification of public employees. Nonetheless, this inclusion of public employees should have only a minimal impact on our results, since their numbers are small and most already earn more than the proposed minimum wage increases.[1]

All wages from the 2014 survey were adjusted upward to account for inflation between the time of the survey and the time of measurement of the impact. Actual rates of inflation were used to adjust wages up to 2016. For all subsequent years between 2017 and 2028, baseline wages were adjusted using the projected annual average rate of change in the Consumer Price Index for Urban Workers (CPI-U) for the Midwest region. The 2015 and 2016 Missouri Minimum wage of $7.65 was adjusted by the same factor prior to measuring the impact of a change to the proposed minimum wage in 2019.

After these adjustments, the resulting hourly wage of all employees was compared to the proposed minimum wage. A total of twenty-one proposals were analyzed. For each proposal, we constructed a baseline wage scenario that used only basic wage changes from expected inflation rates to predict each ACS respondent's hourly wage rate in each year

[1] For Missouri's state employees, this can be validated by viewing the earnings of all state employees at: http://mapyourtaxes.mo.gov/MAP/Employees/. In larger counties and cities most all public employees already earn more than the highest proposed minimum wage. Smaller counties and towns may have some public employees who earn less than the highest proposed minimum.

between 2019 and 2028. We then constructed a counterfactual, or "proposed" wage distribution for each worker under all twenty-one minimum wage proposed scenarios. Since the minimum wage proposals offer nine different paths for raising the minimum wage for all non-tipped private sector workers, and different wage paths for tipped workers, we create separate minimum wage changes for tipped and non-tipped workers. Specifically, we used information on a worker's occupation and observed wage levels to separately identify tipped workers and assign them the proposed tipped minimum wage in each year, rather than the higher non-tipped minimum wage.[2]

If the proposed minimum wage was less than the inflation-adjusted hourly earnings of an employee, then no impact was calculated. If the proposed minimum wage was more than the hourly earnings for an employee, then the difference between the inflation-adjusted hourly earnings (i.e. baseline) and the proposed minimum wage was calculated. That difference was multiplied by the number of hours the employee worked in the year to calculate the annual impact for that employee. The result was then multiplied by a weighing factor for that employee in the population. The total impact for the state of Missouri was then summed across all affected workers to generate a total estimated increase in wage income in the state.

We do not include an estimate of job losses due to minimum wage changes. Existing research is clear that past minimum wage increases have had no measurable effect on aggregate employment levels. Larger minimum wage increases, such as those in Los Angeles, Seattle, and other jurisdictions, have not yet been studied to detect a clear disemployment effect. While it is possible that there may be some employment losses due to automation or other factors, this potential negative effect is likely offset by the positive potential job growth stemming from multiplier effects of the spending of minimum wage workers who receive substantial raises. There is substantial research to indicate that increases in the minimum wage have multiplier effects that increase the direct effects. For this reason and because of the likely increases in wages for individuals who earn above the proposed minimum wage rates, the impacts summarized in the table are considered conservative estimates relative to the total impact that would occur as a result of increasing the minimum wage to the proposed levels.

II. Economic Literature on the Impact of Minimum Wage Increases on Employment

Next, it is necessary to review the economic literature on the impact of minimum wage increases on employment. Opponents often claim that minimum wage increases may reduce employment in a state. If that is true, then those employment reductions would result in reductions in state income and sales tax revenue. However, review of the most credible recent empirical research on the minimum wage shows that increases in the minimum wage have had no discernible impact on employment. We thus conclude that it is not appropriate to project that the proposed initiative petitions would result in any detectable employment reduction, and resulting losses in income and sales tax revenue, or increases in unemployment-related costs to the state.

Economists have conducted hundreds of studies of the employment impact of the minimum wage. A recent meta-study – a formal statistical study of studies – by Doucouliagos and Stanley (2009) reviewed all the research conducted over the last three decades on the employment impact of minimum wage increases on teenagers in the United States. The researchers concluded that the minimum wage has little or no discernible effect on the employment prospects of low-wage workers. Their study followed a rigorous, peer-reviewed procedure and has the advantage of using a set of predetermined, objective criteria for weighing the validity of statistical findings across studies with different results.

[2] We defined tipped workers as those employed in occupations that typically receive a large share of income as tips. These occupations were 'Bartenders' (4040), 'Waiters and Waitresses', 'Food Servers, Non-restaurant' and 'Miscellaneous food preparation and serving related workers including dining room and cafeteria attendants and bartender helpers'.

(Source: Doucouliagos, Hristos and T. D. Stanley. 2009. "Publication Selection Bias in Minimum-Wage Research? A Meta-Regression Analysis." British Journal of Industrial Relations,vol. 47, no. 2, pp. 406-428.)

Recent theoretical and empirical research emphasizes several explanations for the consistently negligible employment impacts of moderate increases in the minimum wage. First, relative to total wage costs, minimum-wage increases are small. Second, employers and workers appear to respond to minimum-wage increases in many ways that reduce the direct cost to employers and substantially reduce or eliminate the need to cut employment.

Probably the most important economic response to a higher minimum wage is a reduction in turnover. At higher wages, employers fill vacancies faster and retain employees longer, boosting total employment and average productivity per worker while reducing direct and indirect training costs. Dube, Lester, and Reich (2012), for example, examined the effect of the minimum wage on labor turnover among teens and restaurant workers. They find "...striking evidence that separations, new hires, and turnover rates for teens and restaurant workers fall substantially following a minimum wage increase..." (p. 2). Their findings, using nationally representative data, are consistent with local case studies of the minimum wage and related "living wage" laws, including Dube, Naidu, and Reich's (2007) analysis of the San Francisco city-wide minimum wage; Fairris's (2005) study of local government contractors in Los Angeles; Howes (2005) on homecare workers in California; and Reich, Hall, and Jacobs (2005) on workers at the San Francisco airport.
(Sources: Dube, Arindrajit, T. William Lester, and Michael Reich. 2012. "Minimum Wage Shocks, Employment Flows and Labor Market Frictions." "Living Wage Policies at the San Francisco Airport: Impacts on Workers and Businesses." *Industrial Relations*, vol. 44, no. 1, pp. 106-138.)

Employers also appear to respond to increases in the minimum wage by taking measures to boost productivity. Hirsch, Kaufman, and Zelenska's (2011) study of the impact of the federal minimum wage increase on 81 fast-food restaurants in Georgia and Alabama, for example, asked fast-food managers about the scope for efficiency improvements in response to the minimum-wage rise. About 90 percent of managers indicated that they planned to respond to the minimum wage increase with increased performance standards such as "requiring a better attendance and on-time record, faster and more proficient performance of job duties, taking on additional tasks, and faster termination of poor performers." (p. 27) Roughly the same share of managers said that they sought to "boost morale" by presenting the minimum wage increase as a "challenge to the store" and using this as a way "to energize employees to improve productivity." (pp. 28-29) Based on their interviews with store managers, the researchers concluded that a minimum wage increase may function as a "catalyst or shock that forces managers to step out of the daily routine and think about where cost savings can occur." (p. 29) (Source: Hirsch, Barry T., Bruce Kaufman, and Tetyana Zelenska, "Minimum Wage Channels of Adjustment." IZA Discussion Paper No. 6132. Germany: Institute for the Study of Labor. http://www2.gsu.edu/~ecobth/IZA_HKZ_MinWageCoA_dp6132.pdf)

A higher minimum wage may also motivate workers to work harder, independently of any actions by employers to increase productivity. According to "efficiency wage" theory, wages above the competitive-market rate may elicit greater work effort for several reasons. As Carl Shapiro and Joseph Stiglitz (1984) have argued, higher pay increases the cost to workers of losing their job, potentially inducing greater effort from workers in order to reduce their chances of

being fired. George Akerlof (1982), arguing from a more sociological point of view, has suggested that workers may see higher wages as a gift from employers, leading workers to reciprocate by working harder. (Sources: Shapiro, Carl and Joseph E. Stiglitz. 1984. "Equilibrium unemployment as a worker discipline device." *American Economic Review*, vol. 74, no. 3, pp. 433-444; Akerlof, George A. 1982. "Labor contracts as partial gift exchange." *Quarterly Journal of Economics*, vol. 97, no. 4, pp. 543-569.)

We therefore conclude that the proposed increase in the Missouri minimum wage would have no discernible impact on the employment levels of low-wage workers. Accordingly, we do not factor in reductions in employment, or any resulting decrease in sales tax or income tax. We also do not project any increased unemployment insurance costs – both because we do not project any resulting job losses, and, additionally, because unemployment insurance costs are paid for by employer premiums, and so are ultimately not a cost to the state.

For similar reasons, we do not believe that the proposed increase will have any significant adverse economic impact on small businesses or, by extension, on corporate income tax revenue. In fact, many small businesses already pay little if any corporate income tax.

III. State and Local Sales and Personal Income Tax Revenue Impact of Raising the Minimum Wage

Based on the wage impact figures calculated above, and the understanding that the minimum wage increases would be unlikely to result in offsetting job losses, we next calculate the impact of the projected wage increases on state and local sales and personal income tax revenue in Missouri. We project only the direct impact of the various minimum wage increase scenarios on such tax revenue. We do not attempt to project the additional impact through a GDP multiplier effect, or the potentially higher sales taxes generated if employers offset wage increases with higher prices (which would be taxable).

Personal Income Tax Revenue. In order to determine the projected increase in personal income tax revenues that would result directly from the increased wages, we had to develop assumptions about the effective income tax rates of the affected workers. We made the following assumptions with respect to the effective tax rate:

1. That 25% of affected workers can be claimed as a dependent on another party's Missouri income tax return and, as a result, would pay an effective tax rate of 6.0% on the increase in income;
2. That 50% of the affected workers would file as single taxpayers, would claim one deduction of $2,100, and would be entitled to a standard deduction of $5,800. This would result in an effective tax rate of 2.47%;
3. The remaining 25% would, we assumed, pay no additional Missouri income tax.

In light of these assumptions, the increased Missouri income tax revenue for each petition version can be calculated as follows: (total wage increase * 25% * 6.0%) + (total wage increase * 50% * 2.47%) + (total wage increase *25% * 0%).

Sales Tax Revenue. The state of Missouri imposes a 4.225% state sales tax on those items that are not exempt from the sales tax base. In addition, the average local sales tax rate is 2.95%. As a result, the average Missouri net sales tax rate is 7.175%. To estimate the share of income that is spent on goods and services that are subject to sales taxes, we used data from the 2015 Consumer Expenditure Survey (CES) for the US to estimate the share of income spent on categories that are subject to sales taxes. The CES summary tables list average spending per consumer across 20 different

categories (e.g. housing, transportation, food away from home) and we categorized each spending item as taxable or non-taxable and then calculated the share of spending that we taxable.[3] The resulting rate was 30.3 percent.

Based upon the above assumptions, and the total wage increase calculations for each version of the petition, we estimate that the increase in state income tax revenue resulting from the increased wages would be as follows:

Table 2. Summary of the Impact of Minimum Wage Increases on State and Local Sales and Income Taxes in Year of Full Minimum Wage Final Implementation.

Proposal	State Sales Tax (4.225%)	Local Sales Tax Revenue (2.95%)	Total Sales Tax Revenue Increase	Personal Income Tax Revenue	Total Sales and Personal Income Tax Revenue Increase
13,14,15[a]	$55,814,587	$38,971,132	$94,785,719	$119,213,129	$213,998,848

Note: Author's Analysis of American Community Survey (ACS) data from 2014 and fiscal impact assumptions described above. All dollars are in nominal figures. (a) Since these proposals only vary on non-economic factors, their economic and fiscal impacts are treated as equal for the purposes of this report.

As described in Table 2 above, the fiscal impact of the proposed minimum wage increases varies based on the ultimate level of the minimum wage and the degree of tipped minimum wage phase out. The estimates of the total fiscal benefit range from $164 million to $282 million annually. Appendix tables A1 through A13 provide a year-by-year summary of the fiscal benefits.

[3] Specifically, the categories we assumed to be subject to state and local sales taxes are: food, household furnishings and equipment, vehicle purchases, gasoline and motor oil, entertainment, and all other expenditures. We assumed that 50 percent of the spending on the category "apparel and services" was taxable.

We hope that this information is useful to your office as your prepare your analyses of the petitions.

Respectfully submitted,

Lara Granich

Robert Bonney, Chief Executive Officer of the Missouri Restaurant Association provided the following information as an opponent of this initiative petition.

These corrections were subsequently provided to the submitted information

In the table on the bottom of page 7 and top of page 8, both averages for 2023 should be based on a 5 year phase-in. Accordingly, the figure on that table should state for 2023 ($12) Average Annual Unemployment Premiums Paid by State of $16,269,523.52.

The corresponding change on the table on page 12 would be to state, for 2023 ($12) Total Net Loss to State Government from Taxes and Unemployment Insurance of ($19,137,851.76).

Re: Initiative Petitions 2018-196 through 2018-216

Dear Mr. Halwes,

I write on behalf of Robert Bonney. Mr. Bonney is the Chief Executive Officer of the Missouri Restaurant Association. Please consider this letter and the accompanying studies as his fiscal impact statement as an opponent of Initiative Petitions 2018-196 through 2018-216 (the "Initiative Petitions"). If passed, any of these twenty-one initiatives would have a substantial negative impact on state and local governments, as well as Missouri small businesses. Those effects are both direct (as noted in Section 1) and secondary (as noted in Sections 2 through 5). The direct effects stem from higher labor and contracting costs that the state and its political subdivisions will incur, despite the Initiatives' effort to exclude government workers from the mandate.

The indirect effects will present a debate this Office has seen before. The proponents of the Initiative Petitions will once again rely on data sourced from political activist groups who claim increases in the minimum wage only serve to create new taxable income. The reality is that such groups approach this issue with political bias. Their analysis is one-sided because it completely ignores the fact that a wage increase does not "create" income from thin air; instead, it is an economic transfer from Missouri businesses to workers. Missouri businesses must pay the new wages "created" by the increases. Political activists' models fail to account, then, for two specific manifestations of the "debit" side of this transfer: reductions in employment, and the reduction in corporate income tax paid based upon business done in Missouri.

The failure to account for any employment effect at any proposed wage increase—even a drastic increase of the minimum wage to $13—is particularly puzzling, because Missouri's most populous areas border Illinois and Kansas. These states, respectively, have minimum wages of $8.25 and $7.25. Neither state adjusts the minimum wage for inflation. Likewise, the second effect—loss of corporate income tax revenues—is a mathematical certainty. Missouri businesses will be the source of the wage increase, which will lower their own taxable income. Assuming a one-to-one substitution of "created" wages for lost corporate income, the difference in the rates

at which these two types of income are taxed will result in a net decrease in state revenue. A dollar from increased wages is taxable by state government in Missouri at 6% or substantially less, whereas Missouri's corporate income tax rate is 6.25%.

On top of these two types of negative outcomes—lower employment and lower state tax revenues—there may be second-order effects to small businesses because they lack the access to capital to weather price fluctuations; they may not survive at all because they may not have the flexibility to simply cut employment, shifting their reliance to capital instead of labor resources, or suffering a decrease in production and revenue.

In short, much of the fiscal impact regarding the current crop of wage-related ballot measures is secondary: they cause transfers of wealth within (or out of) the state economy, and those transfers of wealth then create second-order effects for state and local governments via their collection of tax revenues and provision of welfare services for the unemployed or less-employed. Because these fiscal notes call for the Auditor operate in the area of secondary effects, it is critical that she treat both sides of the wealth transfer equally, and refrain from assessing only one half of the wage increase equation.

1. Direct Labor Cost Impact on State and Local Government Budgets

As noted to the State Auditor's Office previously by Dr. David Macpherson, a nationally prominent labor and economics expert, there are two ways to measure labor cost on state and local government budgets. First, one can use the information included in fiscal note responses from state and local government entities. It is important to note that these fiscal notes provide an incomplete and, therefore, too-low estimate of labor cost. Few state and local government entities respond to requests for a fiscal note response, and those that do respond often ignore important effects.

Second, data from the U.S. Census Bureau's Current Population Survey (CPS) can be used to calculate increased labor cost to state and local government entities in Missouri. To combat this time-honored analysis, and in a blatant attempt to manipulate the fiscal note process, the Initiative Petitions provide that they will raise the minimum wage for private workers, but not for workers employed by state or local governmental entities. No conceivable justification exists for solely raising the minimum wage on private businesses. Whatever the disparity between the value of total compensation at a private business and at a government employer, that disparity does not approach the wage adjustments at issue here, ranging from an inflation adjusted wage increase of 51.16% (($13-$8.60)/$8.60) in Initiative Petitions 2018-198 through 2018-201 to a wage increase of 30.17% (($11-$8.45)/$8.45) in Initiative Petitions 2018-213 through 2018-215.

Moreover, it is unreasonable to assume that on a sustained basis public employers, as defined in the Initiative Petitions, would be able to maintain dramatically lower wage levels than private businesses. Public employers would lose staff employable at higher rates in the private market, imposing substantial costs on government productivity. Using the method traditionally employed by labor economists and followed by the Auditor's office, one can calculate the annual

wage costs to state and local governmental entities, based on the annual wage cost for each state and local government worker in the ORG CPS, as detailed on page 6 of Dr. Macpherson's 2012 report, attached hereto as **Exhibit A**. Even if the auditor finds that a specific estimate of costs is not determinable, the auditor should note that state and local government "operating costs could increase by an unknown annual amount that could be significant," through the form of higher wage costs and higher contracting costs.

The proponents of the Initiative Petitions may argue that the Auditor should abandon any state and local cost estimates altogether. The proponents will argue that provisions they have inserted in the statute would mean that state and local government entities will not have to pay higher wages to their employees. Setting aside unjustifiable discrimination against private employers (and "public employees"), the provision is of uncertain legal effect and constitutionality. A "public employer," defined in the initiatives as "the state or a political subdivision of the state" still incurs substantial costs for wages of individuals that are "private employees," rather than "public employees." Cleaning services, food service, and other essential services often rely on state contracts with outside vendors. Sometimes, a contract rate may vary depending on the cost of labor. Even if the contract rate is fixed, it must be re-bid periodically, and that bidding process would take into account the new minimum wage. Plainly, the initiative would impose higher costs for state and local governments in contracting with any private entity and its employees. As a matter of law, it would be insufficient and unfair for the Auditor's fiscal note or summary to simply assume that these costs to state and local governmental entities do not exist.

2. Cost of Unemployment Benefits

a) The effect of inflation on Missouri's minimum wage

CPS–ORG data show that between 2007 and 2015, median nominal wages for adult (25–59 years old) workers in the U.S. grew by 1.68 percent a year. However, Missouri's minimum wage is currently adjusted using "the percentage increase or decrease as of the preceding July over the level as of July of the immediately preceding year of the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W)." Section 290.502, RSMo. Coincidentally (or perhaps not), the CPI-W, over the period from 2006 to 2016, also increased at an average rate of 1.68 percent a year.

Year	CPI-W	Observed inflation %
2006	199.2	
2007	203.7	0.022590361
2008	216.304	0.061875307
2009	210.526	-0.0267124

2010	213.898	0.016017024
2011	222.686	0.041085003
2012	225.568	0.01294199
2013	230.084	0.02002057
2014	234.525	0.019301646
2015	233.806	-0.00306577
2016	234.771	0.004127353

Using Missouri's current inflation-adjusted minimum wage rate and an assumed, constant 1.68 percent increase in the CPI-W, the minimum wage in Missouri will be as follows:

Year	Estimated Minimum Wage
2016	$7.65 (observed)
2017	$7.70 (observed)
2018	$7.85
2019	$8.00
2020	$8.15
2021	$8.30
2022	$8.45
2023	$8.60
2024	$8.75
2025	$8.90
2026	$9.05

b) Calculating job loss attributable to increased minimum wage

At least one outside economist, James Sherk, has already provided an estimate for job loss in Missouri based on a $15 minimum wage. Mr. Sherk calculated the effect of a $15 minimum wage implemented in 2021. Mr. Sherk's figures accounted for inflation by estimating the present value of $15.00 in 2021, rather than estimating an absolute figure for wage inflation in Missouri. Mr. Sherk calculated the present value of $15.00 in 2021 to be $13.57, per hour, based on wage inflation of 1.68 percent. Mr. Sherk evaluated the change from $7.65 per hour to $13.57 per hour (a 77.39% increase), exclusive of agricultural workers. Cumulatively, Mr. Sherk calculated this 77.39 percent increase in wages to reduce employment in the affected workforce by (0.7739*0.677) 52.39%.

Graves Garrett LLC

Mr. Sherk calculated that approximately 40.9% of Missouri's Wage and Salary Workers would be affected by such a $15 minimum wage. Mr. Sherk's calculations reveal that a $15 minimum wage in 2021 would be expected to reduce the number of full-time equivalent jobs in Missouri by approximately 218,000. Based on CPS–ORG data, these figures reveal an affected workforce of approximately 416,086 workers impacted by a $15 minimum wage increase in 2021.

However, in 2014, Dr. Macpherson found, using more conservative, national-level Congressional Budget Office data, that an increase to a $10.10 minimum wage, effective January 1, 2015, would eliminate about 15,700 jobs in Missouri. Dr. Macpherson analyzed the effect of a Missouri $10.10 minimum wage using a model suitable to a national analysis. This analysis predicted a loss of 15,700 Missouri jobs based on a wage increase from $7.50 in 2014 to $10.10 in 2015 (a 34.67% increase).

On the whole, the analysis by Mr. Sherk is more instructive here, since it is more recent, Missouri-specific, and anticipates larger wage changes contemplated by the Initiative Petitions. The most accurate way to determine the estimate of Workers Affected would be to analyze the CPS–ORG data. However, without such data readily available in the time constraints imposed by the fiscal note process, it is reasonable for estimation purposes to assume Mr. Sherk's figures are evenly distributed. Assuming that worker data follows an equal distribution, the Initiative Petitions would be expected to result in the following job losses:

Year of final prescribed wage increase	Wage without IP	Wage mandated by IP	Percentage increase	Percentage of affected workers who lose jobs (Percentage Increase x 0.677 Elasticity)	Estimate of Workers Affected	Estimate of Missouri Workers Unemployed by Initiative
2021	$8.30	$11.00	32.53%	22.02%	174,897	38,512
2022	$8.45	$11.00	30.18%	20.43%	162,262	33,150
2022	$8.45	$12.00	42.01%	28.44%	225,866	64,236
2023	$8.60	$12.00	39.53%	26.77%	212,532	56,895
2023	$8.60	$13.00	51.16%	34.64%	275,061	95,281
2024	$8.75	$12.00	37.14%	25.15%	199,683	50,220
2024	$8.75	$13.00	48.57%	32.88%	261,136	85,861
2025	$8.90	$13.00	46.07%	31.19%	247,695	77,256
2026	$9.05	$13.00	43.65%	29.55%	234,683	69,349

c) The best estimate for a price elasticity of demand for low-skilled labor is -0.677.

As noted by Mr. Sherk, starting wages of $15.00 per hour mean that full-time employee must create at least $38,700 a year in value for his or her employer (including wages, employer payroll taxes, and mandatory healthcare benefits). High minimum wages and mandatory benefit costs make it much harder for less-experienced and less-skilled workers to find jobs, particularly full-time work.

Recent labor economics scholarship has revealed that, accounting for publication bias, a state-specific elasticity of demand for less-skilled workers is, on average, approximately -0.677, though some estimates are even higher, around -1.0.[1] "[E]conomists have extensively studied how businesses respond to higher wages overall, not just minimum-wage increases. On average these studies find a 10 percent increase in labor costs causes firms to reduce employment of less-skilled workers by 6.8 percent in the long run."[2]

While these elasticity estimates are substantial in absolute terms, there is reason to believe that such estimates might still understate the impact of a Missouri state-specific effort to increase the minimum wage. This is so for several reasons. First, traditionally, labor economists view labor as a reasonably difficult input to substitute; however, Missouri businesses have readily available options. There are relatively few barriers to doing business in Missouri's border states, and businesses can easily relocate across a state line to take advantage of more favorable wage (and tax laws). Additionally, substantially raising the cost for Missouri labor, relative to labor sources in other states and other countries, is likely to force many manufacturing jobs in Missouri to disappear entirely. Automation is also a significant risk. The substitution of labor is becoming increasingly easy due to technology advancements and the "sharing" economy, where fewer individuals are "employees" covered by the minimum wage. Finally, a labor "price shock" may result in significant decreases in the demand for goods and services. People make behavioral changes to avoid higher costs, including eating out less often and generally decreasing consumption (or shifting their activities to consumption involving comparatively low amounts of labor) wherever possible.

[1] Sherk, James, "How $15-per-Hour Minimum Starting Wages Would Affect Each State," The Heritage Foundation, http://report.heritage.org/ib4601.

[2] "The coefficients on these estimates imply an elasticity of –0.677 for a study published in 2012 (the most recent year in their data) of long-run unconditional labor demand for low-skilled labor in the U.S., estimated using industry-level administrative panel data and a structural form model." "Estimates that do not account for publication bias tend to slow a long-run elasticity closer to –1.0. See, for example, George Borjas, Labor Economics, 6th ed. (Columbus, OH: McGraw-Hill, 2013), Chapter 4: 'The evidence also suggests that the estimates of the long-run labor demand elasticity cluster around –1, so the long-run labor demand curve is indeed more elastic than the short-run curve.' " Sherk, available at http://report.heritage.org/ib4601.

Graves Garrett LLC

d) Unemployment Benefit Costs

We derived an average unemployment payout by calculating the expected weekly unemployment benefit amount. Based on current data, the expected unemployment weekly benefit amount of a worker making $7.65 an hour, on a 40 hour workweek, is $159.12 per week, for 20 weeks.[3] The expected unemployment weekly benefit amount of a worker making $10.99 an hour is $228.59 per week. The expected unemployment weekly benefit amount of a worker making $11.99 an hour is $249.39 per week. The expected unemployment weekly benefit amount of a worker making $12.99 an hour is $270.19 per week. We assume that workers will seek unemployment insurance for the full twenty weeks authorized under Missouri law, because unemployment attributable to an increase in the minimum wage is structural. In this case, structural unemployment occurs because workers' job skills do not meet the established "price floor" of labor, rendering the worker's skills unmarketable. Assuming an even distribution of workers affected, the average unemployment benefit cost to the state for a worker is calculated as follows:

- For Initiative Petitions 2018-213 through 2018-216, [($159.12+$228.59)/2]*20 = $3,877.10
- For Initiative Petitions 2018-196, 2018-197, 2018-200, 2018-202, and 2018-204 through 209, [($159.12+$249.39)/2]*20 = $4,085.10
- For Initiative Petitions 2018-198, 2018-199, 2018-201, 2018-203, 2018-210 through 2018-212, [($159.12+$270.19)/2]*20 = $4,293.10

Consistent with Dr. Macpherson's 2012 report, it would be reasonable for the Auditor to assume that 35% of unemployed workers will receive unemployment benefits. Combining these numbers leads to the following estimates:

Year of final prescribed wage increase	Estimate of Missouri Workers Unemployed by Initiative	Estimated Unemployment Amount Per Worker	Estimated Total Unemployment Premiums Paid	Average Annual Unemployment Premiums Paid by State
2021 ($11)	38,512	3,877.10	$52,260,206.32	$17,420,068.77
2022 ($11)	33,150	3,877.10	$44,984,052.75	$11,246,013.19
2022 ($12)	64,236	4,085.10	$91,843,669.26	$22,960,917.32
2023 ($12)	56,895	4,085.10	$81,347,617.58	$20,336,904.39

[3] https://labor.mo.gov/DES/Claims/calculator. A 2015 law decreased the unemployment benefit period from 20 weeks to 13 weeks, but the Supreme Court of Missouri struck down the law in July 2016.

2023 ($13)	95,281	4,293.10	$143,167,801.39	$28,633,560.28
2024 ($12)	50,220	4,085.10	$71,803,802.70	$11,967,300.45
2024 ($13)	85,861	4,293.10	$129,013,450.69	$21,502,241.78
2025 ($13)	77,256	4,293.10	$116,083,706.76	$16,583,386.68
2026 ($13)	69,349	4,293.10	$104,202,767.17	$13,025,345.90

3. Impact on State Income Tax Revenue

The 2012 analysis prepared by Dr. Macpherson may also be used as a reference in calculating the effect of the initiative petitions on state income tax revenue. Here, again, it is reasonable to assume that our "affected workers" are evenly distributed, though precise CPS–ORG data would also provide a reliable estimate. Here, the increased income tax revenue is the additional income tax paid by workers whose wages increase. There is a loss of revenue, however, in the form of decreased income tax paid by workers whose wages decrease and businesses who absorb the increased cost of labor, rather than passing it along to customers.

For the purposes of these estimates, we assume that workers work 40 hours a week and 52 weeks per year:

Year of final prescribed wage increase	Estimate of Workers Affected	Estimate of Missouri Workers Unemployed by IP	Estimate of Missouri Workers with Increased Wages	Annual Increase in Wages Paid to Workers who get Wage Increase in Final Year	Annual Decrease in Wages Paid to Workers now Unemployed
2021 ($11)	174,897	38,512	136,385	$382,969,080.00	$108,141,696.00

2022 ($11)	162,262	33,150	129,112	$342,405,024.00	$87,913,800.00
2022 ($12)	225,866	64,236	161,630	$596,737,960.00	$237,159,312.00
2023 ($12)	212,532	56,895	155,637	$550,332,432.00	$201,180,720.00
2023 ($13)	275,061	95,281	179,780	$822,673,280.00	$436,005,856.00
2024 ($12)	199,683	50,220	149,463	$505,184,940.00	$169,743,600.00
2024 ($13)	261,136	85,861	175,275	$774,715,500.00	$379,505,620.00
2025 ($13)	247,695	77,256	170,439	$726,750,021.03	$329,419,584.00
2026 ($13)	234,683	69,349	165,334	$679,192,072.00	$284,885,692.00

These net wage increases will lead to corresponding increases in state income tax collections. Traditionally, it has been assumed that about 50% of affected workers will pay 6% income tax, while the other 50% of workers pay no state income tax. This assumption may be less accurate at the higher wage increases contemplated by the Initiative Petitions. Accordingly, figures are also displayed assuming that about 75% of affected workers will pay 6% income tax, while the other 25% of workers pay no state income tax.

Annual Net Increase in Wages Paid To Workers	Annual Income Tax Increase from Wage Increase (50% pay tax)	Annual Income Tax Increase from Wage Increase (75% pay tax)
$274,827,384.00	$8,244,821.52	$12,367,232.28
$254,491,224.00	$7,634,736.72	$11,452,105.08
$359,578,648.00	$10,787,359.44	$16,181,039.16
$349,151,712.00	$10,474,551.36	$15,711,827.04
$386,667,424.00	$11,600,022.72	$17,400,034.08
$335,441,340.00	$10,063,240.20	$15,094,860.30
$395,209,880.00	$11,856,296.40	$17,784,444.60
$397,330,437.03	$11,919,913.11	$17,879,869.67
$394,306,380.00	$11,829,191.40	$17,743,787.10

Graves Garrett LLC

Based on these figures, Missouri businesses must also decide whether to pass along any increase in wage costs (wages and mandatory payments).[4]

Year of final prescribed wage increase	Annual Cost to Business from Increased Wage	Annual Decreased Corporate Income Tax if cost is fully absorbed	Annual Decreased Corporate Income Tax if cost is 50% absorbed
2021 ($11)	$412,266,214.62	$25,766,638.41	$12,883,319.21
2022 ($11)	$368,599,008.34	$23,037,438.02	$11,518,719.01
2022 ($12)	$642,388,413.94	$40,149,275.87	$20,074,637.94
2023 ($12)	$592,432,863.05	$37,027,053.94	$18,513,526.97
2023 ($13)	$885,607,785.92	$55,350,486.62	$27,675,243.31
2024 ($12)	$543,831,587.91	$33,989,474.24	$16,994,737.12
2024 ($13)	$833,981,235.80	$52,123,827.23	$26,061,913.62
2025 ($13)	$782,346,397.64	$48,896,649.85	$24,448,324.93
2026 ($13)	$731,150,265.50	$45,696,891.59	$22,848,445.80

Assuming businesses absorb half of the cost of increased wages, and 75 percent of affected workers pay the new, higher taxes, the effect on state income tax collections is estimated to be:

Year of final prescribed wage increase	Annual Net Income Tax Revenue Loss
2021 ($11)	($516,086.93)
2022 ($11)	($66,613.93)
2022 ($12)	($3,893,598.78)
2023 ($12)	($2,801,699.93)
2023 ($13)	($10,275,209.23)
2024 ($12)	($1,899,876.82)
2024 ($13)	($8,277,469.02)
2025 ($13)	($6,568,455.26)
2026 ($13)	($5,104,658.70)

[4] A healthcare benefit cost estimate is not available based on the time limitations imposed by this fiscal note.

Graves Garrett LLC

4. Sales tax revenue gain or loss

Projecting any increase in sales tax revenue resulting from an increased minimum wage would require the auditor's office to conclude, based on data separate and apart from the sheer conjecture typically offered by political activist groups: (1) the net effect on consumer disposable income and (2) the percentage of a consumer's disposable income that is spent on goods subject to the sales tax, taking into consideration that the scope of Missouri's sales tax has been truncated by a voter-approved constitutional amendment from November 2016.

Typically, the Auditor's office multiplies the total increase in worker earnings (which should be adjusted for employment reductions) and multiplies the result by 25 percent, then multiplying that figure by the Missouri the population weighted combined average state and local sales tax in Missouri, 7.81%.[5] Based on this estimate, the population-weighted combined average local sales tax is 3.585%.

However, it would be deceptive to fail to account for sales tax losses from workers whose wages are eliminated or sales tax losses from reduced business profits (attributable to the higher wages paid), which will lower spending by business owners. The first figure is calculable by determining the total annual wages (adjusted for employment deductions) for all workers who lose jobs due to a minimum wage hike, multiplied by 25 percent. The second number is calculable by multiplying the total increase in worker earnings (multiplied by 1.0765 to account for Social Security and Medicare taxes) by approximately 15 percent.[6]

Year of final prescribed wage increase	Annual Net Increase in Wages Paid To Workers	New Wages Spent on Sales Tax Items	Annual Cost to Business from Increased Wage	Annual Business Income No Longer Included in Sales Tax Base (50% passed-through)
2021 ($11)	$274,827,384	$68,706,846	$412,266,214.62	($61,839,932)
2022 ($11)	$254,491,224	$63,622,806	$368,599,008.34	($55,289,851)
2022 ($12)	$359,578,648	$89,894,662	$642,388,413.94	($96,358,262)
2023 ($12)	$349,151,712	$87,287,928	$592,432,863.05	($88,864,929)

[5] http://taxfoundation.org/sites/taxfoundation.org/files/docs/LOST--2015.png.
[6] This estimate would also need to be adjusted to reflect certain employers' mandate under the Affordable Care Act to provide healthcare coverage and pay 60 percent of such coverage.

2023 ($13)	$386,667,424	$96,666,856	$885,607,785.92	($132,841,168)
2024 ($12)	$335,441,340	$83,860,335	$543,831,587.91	($81,574,738)
2024 ($13)	$395,209,880	$98,802,470	$833,981,235.75	($125,097,185)
2025 ($13)	$397,330,437	$99,332,609	$782,346,397.64	($117,351,960)
2026 ($13)	$394,306,380	$98,576,595	$731,150,265.51	($109,672,540)

Accordingly, the annual estimations of the effects on state and local revenue, and total state economic impact are as follows:

Year of final prescribed wage increase	Annual Net Income Tax Revenue Loss	Annual Net Effect on State Sales Tax	Total Annual Effect on State Tax Revenue	Total Net Loss to State Government from Taxes and Unemployment Insurance	Annual Net Effect on Local Sales Tax
2021 ($11)	($516,086.93)	$290,127.11	($225,959.82)	($17,646,028.59)	$246,178.86
2022 ($11)	($66,613.93)	$352,067.34	$285,453.41	($10,960,559.78)	$298,736.43
2022 ($12)	($3,893,598.78)	($273,087.10)	($4,166,685.88)	($27,127,603.19)	($231,720.06)
2023 ($12)	($2,801,699.93)	($66,628.31)	($2,868,328.24)	($23,205,232.64)	($56,535.50)
2023 ($13)	($10,275,209.23)	($1,528,364.68)	($11,803,573.91)	($40,437,134.18)	($1,296,849.08)
2024 ($12)	($1,899,876.82)	$96,566.47	($1,803,310.36)	($13,770,610.81)	$81,938.65
2024 ($13)	($8,277,469.02)	($1,110,951.72)	($9,388,420.74)	($30,890,662.52)	($942,665.55)
2025 ($13)	($6,136,139.31)	($761,317.55)	($6,897,456.87)	($23,480,843.55)	($645,993.71)
2026 ($13)	($5,104,658.70)	($468,803.67)	($5,573,462.37)	($18,598,808.26)	($397,789.62)

5. Damage to small business

Additionally, any proponent or opponent fiscal note submission is required, pursuant to Missouri law, to state the impact of the initiative on small businesses. According to analysis by the Employment Policies Institute, 40 percent of the minimum wage workforce is employed at businesses with fewer than 50 employees. [7] The impact on extra costs to small business may be more significant than even this 40% figure suggests. Small businesses are more easily shut down by input price increases than large businesses, which have greater access to capital to weather the

[7] https://www.epionline.org/oped/who-really-employs-minimum-wage-workers/

storm. Clearly, small businesses that do not shut down due to increases in the minimum wage will pay higher costs, estimated at about 40% of business' total increased costs, described above.

Conclusion

In conclusion, the State Auditor should attempt to quantify the increased cost to be borne by state and local government entities through increased contracting costs as a result of an increase to the minimum wage. This direct cost is outlined in Section 1.

Indirect costs are outlined in Sections 2 through 5, and show a net loss. Although such second-order effects more difficult to predict, a net loss is easily the most likely outcome. Significantly, this result is only obtainable if the Auditor reviews both the "credit" and "debit" sides of the transfer of wealth from businesses to workers. The Auditor should refrain from taking the proponents' likely invitation to consider and present only the "credit," side, and should attempt to provide a complete picture of all effects of a minimum wage increase, including the loss of revenue to state and local governments from individuals who lose employment. Only conveying (or quantifying) the potential for gain, without fairly conveying the likelihood of net loss, would be deceptive and unfair.

The State Auditor's previous 2018 fiscal notes are a good model. Each of the fiscal notes for the Initiative Petitions should follow the already-established format and state that:

> "[O]perating costs could increase by an unknown annual amount that could be significant. State and local government tax revenue could change by an unknown annual amount ranging from a $## million decrease to a $## million increase depending on business decisions."

Should you desire further detail or have any questions about this fiscal impact statement, please do not hesitate to contact me.

Sincerely,

Edward D. Greim

ABOUT THE MISSOURI RESTAURANT ASSOCIATION

With origins dating back to 1916, the Missouri Restaurant Association (MRA) is a statewide trade association representing over 1,500 member establishments. The association's membership is diverse, and includes full service, fast casual, and quick service restaurants, cafeterias, hotels, schools, institutions, contract feeders, and ancillary foodservice providers such as theme parks. The association has been successful in securing support from virtually every segment of the foodservice and hospitality industry.

MRA includes seven chapters as extensions of the parent organization, each with its own Officers, Board of Directors, and limited budget. The association is governed by a Board of Directors comprised of five Officers, 33 Directors, and each President of the seven affiliated chapters.

MRA is dedicated to serving the needs of the foodservice and hospitality industry, enhancing and improving its growth and development, assisting and educating its members in operating more effectively, improving the political and social environment in which the industry conducts business, for the benefit of its members, patrons, employees, and the well-being of the community.

David A. Macpherson is the E.M. Stevens Professor of Economics at Trinity University. He received undergraduate and doctoral degrees in economics from Pennsylvania State University.

Dr. Macpherson has published over 60 articles in leading economics and real estate journals including Review of Economics and Statistics, Industrial and Labor Relations Review, Journal of Labor Economics, Journal of Human Resources, and Journal of Real Estate Economics and Finance. His research has been funded by a variety of entities including the National Science Foundation, Florida Legislature, and the National Association of Realtors. He is co-author of the undergraduate labor economics text, Contemporary Labor Economics, as well as the principles of economics text, Economics: Private and Public Choice. He is included in Who's Who in Economics, Fourth Edition, which includes the 1,200 most frequently cited economists.

THE IMPACT OF A $10.10 MINIMUM WAGE ON JOBS AND TAXPAYER COSTS IN MISSOURI

June 2014

Economic Analysis by **Dr. David Macpherson**

Index

Executive Summary 4
Results 5
Technical Appendix 7

EXECUTIVE SUMMARY

Missouri's minimum wage of $7.50 is linked to rise in most years with the inflation rate. But some state legislators and labor unions would like to raise that figure even higher. For instance, a recent labor union-organized bus tour in the state promoted a $10.10 minimum wage in St. Louis.

Proponents have enthusiastically pointed to the benefits of the $10.10 policy. But there's been far less discussion of the costs involved with a $10.10-an-hour minimum wage—both the cost on employment, and the cost to taxpayers.

In this study, labor economist David Macpherson of Trinity University uses Census Bureau data to estimate the impact on Missouri's labor market and budget from raising the minimum wage to $10.10 an hour. He also provides separate results for the St. Louis metropolitan area.

Dr. Macpherson's employment estimates follow the methodology used by the nonpartisan Congressional Budget Office in its report earlier this year estimating the impact of a $10.10 minimum wage nationwide, which in turn relied on 60 different empirical studies to formulate its estimates.

Statewide, he finds that over 15,000 jobs would be lost at the $10.10 wage level—with 9,300 of those jobs being held by women. In the St. Louis metropolitan area, approximately 4,800 jobs would be lost from a $10.10 minimum wage.

The cost to taxpayers would be significant: There are approximately 40,000 state and local employees whose wages would be affected by the $10.10 increase in Missouri, for a combined cost to taxpayers of $87 million annually.

Raising wages is an admirable goal, but the evidence suggests that accomplishing this goal with a blunt wage mandate could do more harm than good.

RESULTS

The minimum wage is one of the most hotly-debated topics in the political world. Some legislators claim that a higher base wage will stimulate the economy; others claim that it will reduce jobs when affected employers can't offset the higher costs through higher prices.

Economists, who have studied the issue since the late 1940s, tend to take a skeptical view of minimum wage increases. Since the early 1990s, for instance, roughly 85 percent of the most credible research on the minimum wage points to job loss for less-skilled groups. The nonpartisan Congressional Budget Office (CBO), in an evaluation of President Obama's proposed $10.10 minimum wage increase, reviewed 60 different studies and concluded that the policy would eliminate 500,000 jobs if enacted.

The estimates that follow, of the employment impact of a higher minimum wage on Missouri's labor market, were performed by Dr. David Macpherson of Trinity University. Dr. Macpherson followed closely the methodology used by the CBO in its 2014 report. Dr. Macpherson also estimates the taxpayer costs of a higher minimum wage, as many state and local public employees will see their earnings increase when the minimum wage rises.

Dr. Macpherson's methodology is presented in detail in a technical appendix.

Estimated Employment Effects of a $10.10 Minimum Wage in Missouri

Statewide, Dr. Macpherson finds that increasing the minimum wage to $10.10 would eliminate over 15,000 jobs—approximately 60 percent of which are jobs held by women. The bulk of the job losses would be concentrated among individuals with a high school degree or less, and among people who work in the retail or leisure & hospitality industries.

(Note: Totals have slight discrepancies due to rounding.)

City-Specific Minimum Wage Employment Impacts

The city of St. Louis has been the subject of a number of protests calling for a higher minimum wage. Dr. Macpherson analyzed the employment impact of a $10.10 minimum wage in the St. Louis metropolitan area, providing breakouts by gender and education where the data permits. He estimates that the wage hike would eliminate approximately 5,000 jobs—just over half of which would be jobs held by women.

RESULTS CONTINUED

Missouri Taxpayer Costs of a $10.10 Minimum Wage

Dr. Macpherson estimates that approximately forty thousand state & local public employees would be affected by a minimum wage increase to $10.10 an hour. These additional wage costs translate to new costs for state and local taxpayers. Following the methodology described in detail in the technical appendix, Dr. Macpherson estimates both the straight wage cost of a $10.10 minimum wage, as well as the total compensation cost with Social Security, Medicare, workers compensation, and unemployment insurance included. Statewide, taxpayers would shoulder an additional $87 million in costs if the base wage was increased to $10.10 an hour and public employees were covered by the new wage.

Missouri Taxpayer Costs of a $10.10 Minimum Wage

TECHNICAL APPENDIX

Estimating Employment Loss and the Cost to State and Local Government of an Increase in the Minimum Wage

Dr. David Macpherson
E.M. Stevens Professor of Economics
Trinity University

This paper describes how we estimate the employment loss and the cost to state and local governments of a proposed increase in the minimum wage effective on January 1, 2015.

Data and Sample

First, we use data from the Current Population Survey (CPS) Outgoing Rotation Groups (ORG) from January 2011 through December 2013. For each worker in the sample, we calculate their wage rate. We also adjust the wage rate to reflect a forecast of wages in 2015. This is done in two steps. First, based on legislation enacted as of April 2014, we estimate the minimum wage that would be in effect in January 2015 for each state and city that we consider. If a state or city has an indexed minimum wage, we increase the January 2014 state or city minimum wage by the Congressional Budget Office (CBO) inflation forecast for 2014 of 1.7%.

Since we use data from 2011 through 2013, we also follow the CBO approach for forecasting what the wage distribution would be in 2015. This is done in two steps. First, we adjust wages observed prior to 2013 to reflect 2013 minimum wage legislation. For example, if the minimum wage in a state was $7.25 in 2011 and grew to $8.00 by 2013, anyone who earned between $7.25 and $8.00 in 2011 would have their wage increased to $8.00. After wages are adjusted to 2013 levels, we assume that all wages grow by 2.9% in 2014. Using the resulting 2015 distribution of wages, we adjust for minimum wage legislation that would increase the minimum between 2013 and 2015. Anyone earning a wage between the 2013 and 2015 minimum wage is assigned a wage matching the 2015 minimum wage.

After generating the forecast 2015 distribution of wages reflecting wage growth and existing minimum wage legislation, we identify workers who would be affected by additional changes to the 2015 minimum wage as those with wages between the predicted minimum wage legislated for 2015 (or up to $.25 below it) and the proposed minimum.

To estimate the number of affected workers, we take two steps. First, for each state, we estimate the number of affected workers for 2013. Second, we adjust the weights in the 2011 and 2012 data so that the state-specific number of affected workers implied by the 2011 and 2012 data matches that for 2013. This adjustment is designed to correct for the changing economic climate as the economy recovers from the great recession and to generate estimates that are as close as possible to the most recent data (2013). After we adjust the 2011 and 2012 weights, we estimate the number of affected workers by summing their earnings weights and dividing the total by 36 (the number of months of data).

[1] Also, following CBO, anyone earning up to $.25 less than the 2011 minimum wage would have their wage increased by the amount that the minimum wage increased (i.e. a $7.00 wage would be increased to $7.75 in this example). This approach is used to adjust for the fact that many workers round their answers when asked about their wage.

TECHINCAL APPENDIX CONTINUED

Employment Loss

To estimate employment loss, for each affected worker we compute:

L = e *(Proposed Min Wage /Min Wage 2015 – 1)

where e is an assumed elasticity of employment with respect to changes in the minimum wage, Min Wage 2015 is the minimum wage currently legislated for 2015, and Proposed Min Wage is the minimum wage that is being proposed for 2015. Thus, for example, if a worker is projected to earn the federal minimum of $7.25 in 2015, the expected reduction in employment resulting from a $10.10 minimum wage in 2015 if e=.45 is .45*(10.10/7.25 – 1) = .18. That is, for every 100 workers currently earning the federal minimum, the expectation is that 18 would lose a job if the minimum wage elasticity is .45.

To estimate the aggregate employment loss in the economy, we use earnings weights to sum L across workers. We also follow the Congressional Budget Office (2014) and use an elasticity of 0.15 for non-teenagers and 0.45 for teenagers.

Cost to State and Local Government

We use the same data to estimate the cost to state and local government of a proposed minimum wage hike. We apply the same definition of affected workers described above and estimate the number of state and local government workers affected by a minimum wage hike. We do not, however, assume that there is any job loss for state and local workers as we do not have an appropriate elasticity estimate specific to state and local workers. To the extent that state or local governments reduce hours or employment in response tothe minimum wage hike, our estimate of the cost of the hike would be overstated.

To estimate the increase in annual payroll cost resulting from an increase in the minimum wage, we estimate the increase in annual cost for each worker as:

(Proposed Min Wage-Min Wage 2015)*weekly hours*52

We then multiply the increase in annual cost by the earnings weight for each worker and sum across workers. Since an increase in wages also requires increased employer contributions for Social Security, Medicare, workers' compensation and unemployment insurance, we apply an estimate of the payroll tax rate for these mandatory programs to calculate the additional cost for these programs.

For each state and city considered, we provide tables summarizing the number of affected workers, employment loss, and the distribution of employment loss by sex, education, race, age and industry. Given that we use three years of data, a rule of thumb for minimum sample size required to achieve a reasonably accurate estimate of the employment loss is to require at least 30,000 people be in the relevant category. For example, if there are fewer than 30,000 people projected to be in a particular industry category, the Bureau of Labor Statistics would not report the estimate due to a lack of reliability based on the variance of the estimate relative to its mean.

In addition to the estimate of employment loss, for each state or city considered, we estimate the number of state and local workers that would be affected by the minimum wage hike and the total annual cost to government in terms of wages and total compensation. As with the employment estimates, we advise caution in interpreting estimates that are based on fewer than 30,000 affected workers.

[3] Congressional Budget Office, "The Effects of a Minimum-Wage Increase on Employment and Family Income," February 2014.

[4] For workers paid by the hour the reported hourly wage was used. For workers who are not paid by the hour, we calculate the hourly wage by dividing usual weekly earnings by usual weekly hours. Overtime pay was calculated as time and one-half for hours above 40 hours for hourly workers.

[5] The assumed payroll tax for Medicare and Social Security is 7.65 percent. To estimate the payroll tax for workers' compensation and unemployment insurance, we use unpublished data from the 2010 Employer Cost of Employee Compensation database for state and local workers in the relevant region in 2010.

FISCAL ANALYSIS
OF
PROPOSED STATUTORY INITIATIVE PETITIONS 2012-084 AND 2012-085

Prepared for

Victor Allred versus Robin Carnahan and Thomas Schweich
Circuit Court of Cole County, Missouri

FISCAL ANALYSIS
OF
PROPOSED STATUTORY INITIATIVE PETITIONS 2012-084 AND 2012-085

I. Introduction

This report was undertaken at the request of counsel representing plaintiffs in the case of Victor Allred versus Robin Carnahan and Thomas Schweich. As part of the basis of the lawsuit, the plaintiffs allege that the fiscal note summaries for proposed statutory initiative petitions 2012-084 and 2012-085 are insufficient and unfair. I was asked by counsel to evaluate the fiscal impact of proposed statutory initiative petitions 2012-084 and 2012-085.

The results of my analysis indicate:

(1) labor costs to state and local government entities, based on state auditor fiscal notes, will rise by more than $1,352,182. A more inclusive estimate indicates that state and local government labor costs will increase by $16,003,712;

(2) unemployment benefit costs will rise by $4,397,510 during the first year of the minimum wage increase;

(3) individual income tax revenue will rise by at most $4,078,088;

(4) the loss in corporate income tax revenue could be as high as $9,243,105;

(5) state and local sales tax revenue will rise by at most $2,919,327;

(6) during the first year: state and local governments will incur increased costs of $20,401,222; the change in state and local government revenue will

range from -$2,245,690 to +$6,997,415; and the net state and local government fiscal impact will range from -$22,646,912 to -$13,403,807.

The report is organized as follows. My qualifications to prepare this report are contained in Section II. Section III describes the data and records I relied upon for this report. Section IV reviews the estimated fiscal impact of proposed statutory initiative petitions 2012-084 and 2012-085. A summary and my conclusions are provided in Section VI.

II. Qualifications

I am currently the E.M. Stevens Professor of Economics at Trinity University in San Antonio, Texas. Previously, I was employed by Florida State University as Director of the Pepper Institute on Aging and Public Policy and the Rod and Hope Brim Eminent Scholar in Economics. I have taught both undergraduate and graduate Econometrics (statistical analysis of economic data), and Labor Economics. I have published over 50 articles in peer-reviewed professional journals.

I am currently serving on the editorial board of the *Journal of Forensic Economics*, which is a peer-reviewed journal. I have also served as a reviewer or 'referee' for 24 peer-reviewed journals, including the *Journal of Human Resources, Journal of Labor Economics, Quarterly Journal of Economics,* and the *Review of Economics and Statistics*. Based upon these experiences, I am very familiar with the scholarly and professional research process and the concept of peer review.

I have prepared numerous analyses and reports that use statistical methods as applied to specific questions. I have been responsible for developing the techniques and approaches required for these analyses. I routinely use computers and statistical software packages to assist me in my analytical work. I have been qualified as an expert witness on statistical analysis of employment discrimination and economic damages in state courts in Florida and Georgia and Federal Courts, and I have given expert testimony. I have prepared analyses and offered testimony on behalf of both plaintiffs and defendants.

Details of my qualifications are reflected in my current resume and legal cases, attached as Appendix A to the report.

III. Data and Records

I reviewed the following materials in preparing this report.

- Plaintiff's Complaint
- Material cited in footnotes below.

IV. Fiscal Impact

A. Overview

The proposed statutory initiative petitions 2012-084 and 2012-085 contain many elements in common. Both initiatives would increase the Missouri minimum wage to $8.25 per hour, alter the exemption for retail and service firms, raise the cash wage of tipped workers from 50% to 60% of the minimum wage, and increase the statute of limitation from two to three year for underpayment claims.

The initiatives differ in their linkage to the federal minimum wage. Initiative petition 2012-084 requires that the state minimum wage be automatically increased to the

federal minimum wage if it is higher than the state minimum wage. Initiative petition 2012-085 does not have such a linkage. It only requires that workers be paid the higher of the state minimum wage or the federal minimum wage. The linkage to the federal minimum wage will cause the state minimum wage to be higher under initiative petition 2012-084 over time. This is because the state minimum wage, in contrast to the federal minimum wage, is adjusted for inflation as measured by the Consumer Price Index.

An increase in the minimum wage in Missouri will affect state and local government entities in two ways. First, it will directly increase the cost of labor to state and local government entities. This will occur due to the increase in wages of state and local government workers earning between the existing minimum wage of $7.25 and the new minimum wage of $8.25.[1] In addition, workers laid off due to the minimum wage increase can collect unemployment benefits. The state government will bear the cost of unemployment benefits of these workers for the first 20 weeks. Second, state and local government may gain increased revenue through higher income tax and sales taxes paid by workers affected by the minimum wage who remain employed. However, state and local government will suffer reduced tax revenue to the extent the higher wage cost lowers profits of businesses.

The following sections estimate the cost and revenue effects to state and local government entities of the proposed minimum wage increase.

[1] Information about the minimum wage in Missouri is available at http://www.labor.mo.gov/DLS/minimumwage/.

B. Direct Labor Cost Impact on State and Local Government Budgets

There are two possible ways to measure the direct labor cost on state and local government budgets. First, one can use the information included in the fiscal notes prepared by the State Auditor regarding the proposed initiatives. It is important to note that the fiscal notes provide an incomplete and thus too low estimate of the direct labor cost. The fiscal notes indicate that the Office of Administration's (OA) Division of Personnel reported that as of September 2011 there were 834 state workers who would be affected by an increase of the minimum wage to $8.25 and the "approximate annual cost" would be more than $540,000.

This OA estimate excludes seasonal workers such as State Fair employees, State Parks Employees, and tax season staff. The Division of Revenue noted its labor cost would rise by $40,000. The Division of Natural Resources stated they have over 500 workers who would be affected by the increase, but did not provide an estimate of the cost. The State Fair hired 745 workers that would be affected, but no cost estimate was provided.

Thus, the cost to state government, based on the fiscal notes, would be more than $580,000.

The fiscal notes also provide an incomplete and thus too low measure of the cost to local government and public educational institutions. Many cities and educational institutions did not respond to Office of Auditor's survey or provide an estimate of the cost of the higher minimum wage. The City of Columbia, City of Jefferson, City of

Joseph, Linn State Technical College, and Metropolitan Community College did provide such an estimate. The total cost to these five institutions is $772,182.

Based on the fiscal notes, the cost to state and local government entities of the increase in the minimum wage to $8.25 will be more than $1,352,182.

Second, data from the U.S. Census Bureau's Current Population Survey (CPS) can also be used to calculate the cost of the increased labor cost to state and local government entities in Missouri. Using the data from January 2010 to December 2011 Outgoing Rotation Group (ORG) CPS, I calculated that 17,089 state and local government workers would be affected by the minimum wage increase. I defined affected workers as those individuals earning between $7.00 and $8.24 per hour. Though the minimum wage was $7.25 per hour during this period, I also included those workers reporting earnings of $7.00 to $7.24 since some individuals may round their wage rate. I calculated the annual wage cost for each state and local government worker (i) in the ORG CPS as:

$$Annual\ Wage\ Cost_i = (\$8.25 - current\ wage_i) * weekly\ hours_i * 52.$$[2]

The average annual wage cost increase was $870. I summed the cost over each worker (i) to obtain the total wage cost to state and local government entities in Missouri of $14,866,430.

The increased wage cost is not the only labor cost to state and local government entities of the minimum wage increase. Employers are required to pay 7.65% of their wage costs in Social Security and Medicare taxes. Thus, the total labor cost of the minimum wage increase will be 1.0765 times $14,866,430 or $16,003,712.

---

[2] I assume that persons reporting an hourly wage rate between $7.00 and $7.24 are actually earning $7.25 per hour.

C. Unemployment Benefit Impact

The higher minimum wage will cause firms to reduce their level of employment.[3] As a result, the number of unemployed workers will increase. Thus, another important fiscal cost of the minimum wage increase is the cost of the unemployment insurance benefits for the workers laid off as a result of the minimum wage increase.

To calculate the cost to the unemployment benefits program, I first calculated the number of workers laid off. To do so, I calculated a probability of job loss for each affected Missouri worker (i) in the January 2010 to December 2011 ORG CPS:

$$Probability\ Job\ Loss_{\ i} = \frac{(\$8.25 - Current\ Wage_i)}{Current\ Wage_i} * elasticity_i.$$

I used the preferred employment elasticity (i.e., sensitivity of employment to wage changes) contained in Sabia and Burkhauser (2010), which was -0.6 for individuals aged 16 to 29 without a high school degree and -0.2 for all other individuals. The sole exception was for state and local government workers, where I assumed an elasticity of zero.[4] The sum across all affected workers yielded an estimated job loss of 5,745 jobs.

The next step was to calculate the weekly benefit for the average unemployed worker. Using the benefits calculator on the Missouri unemployment benefits web site and the wage income of average private-sector affected worker ($10,937), yields an average weekly benefit of $109.36[5]. The state of Missouri pays the first 20 weeks of benefits.[6] Thus, each eligible unemployed worker could receive a total of $2,187.20 in

---

[6] See http://www.labor.mo.gov/DES/Claims/

benefits paid for by the state of Missouri. These jobs are permanently eliminated and so it is appropriate to calculate the full amount of benefits for each worker.

Unemployment insurance, however, does not cover all unemployed workers. For example, it does not cover people who leave a job voluntarily, people looking for their first job, and re-entrants who previously left the labor force voluntarily. Furthermore, some individuals don't apply for benefits even though they are eligible. I assume that 35% of the unemployed workers will receive unemployment benefits based on analysis by Wenger (2001).[7]

The last step is to calculate the total cost to the Missouri unemployment benefits program. This done by multiplying the number of jobs lost (5,745) times the average benefit amount ($2,187.20) times the percent of unemployed individuals collecting benefits (35%). This calculation yields a figure of $4,397,510. This cost would be borne only during the first year of the minimum wage increase. The inflation adjustments in the minimum wage will also yield costs to the unemployment insurance program, but it is not possible to estimate the amount.

D. Impact on State Income Tax Revenue

The state of Missouri will gain increased revenue through higher income tax taxes paid by workers affected by the minimum wage who remain employed. However, it will

[7] Jeffery Wenger. "Divided We Fall: Deserving Workers Slip through America's Patchwork Unemployment Insurance System." *Economic Policy Institute*, 2001. Sabia and Burkhauser (2010) make the same assumption in their calculation of the amount of unemployment benefits generated by a minimum wage increase.

suffer reduced corporate income tax revenue to the extent the higher wage cost lowers profits of businesses.

To calculate the impact on individual income tax revenue, I again used data from January 2010 to December 2011 ORG CPS. I defined affected workers as those Missouri individuals earning between $7.00 and $8.24 per hour.[8] I used the following formula to estimate the change in income tax revenue:

$$\Delta Tax\ Revenue_i = (Tax_After_i - Tax_Before_i) - Prob_Job_Loss_i * Tax_Before_i,$$

where Tax_After_i is the income tax paid by worker i after the minimum wage increase. Tax_Before_i is the income tax paid by worker i after the minimum wage increase, and $Prob_Job_Loss_i$ is the probability of job loss for worker i. The first term shows the change in individual income tax revenue assuming no job loss and the second term shows the loss in tax revenue due to the employment loss caused by the minimum wage increase.

The income tax calculations were based on two assumptions.[9] First, the 50% percent of affected workers who were under the age 25 who were assumed to be dependents on another person's tax return. As a result, it was assumed that the affected workers' earnings were taxable at the maximum Missouri income tax rate of 6% both and after the minimum wage increase.[10] Second, all persons age 25 and older were assumed to be paying little or no income tax after exemptions and deductions. Thus, about 50% of the earnings increase will be taxed at a rate of 6%.

---

[8] I again assume that persons reporting an hourly wage rate between $7.00 and $7.24 are actually earning $7.25 per hour. The annual earnings level was calculated as the worker's wage rate times usual weekly hours worked times 52.

[9] The same assumptions are used in the State Auditor's fiscal notes for the initiatives.

[10] This assumption will overstate the revenue increase as 20% of affected workers under the age 25 are living by themselves and some of these individuals will not be a dependent on another person's tax return.

The tax calculations reveal an increase in income tax revenue increase to the state. Assuming no workers were laid off by the minimum wage increase, income tax revenue would rise by $6,043,534. However, the state will lose $1,965,446 in income tax revenue due to the lost earnings of private-sector workers no longer employed due to the minimum wage hike.[11] Thus, the net increase in individual income tax revenue is $4,078,088.

Businesses have three options to respond to the higher labor costs of a higher minimum wage. They can reduce their profits, raise prices, or lay off workers. Based on the 2010-2011 ORG CPS data, the minimum wage increase will raise private-sector labor costs by $192,620,900 if employment levels are not reduced. However, labor costs will be lowered by $55,240,790 due to the reduction in employment. Thus, labor costs will, on net, rise by $137,380,110. These increased labor costs may be either passed on to consumers through higher prices or reduced profits or more likely some combination of higher prices and reduced profits. Assuming that businesses absorbed all of the higher costs through reduced profits, the corporate income tax revenue would fall by the Missouri corporate income tax of 6.25% times the rise in labor costs of $137,380,110 * 1.0765 (to account for employer-paid Social Security and Medicare taxes) or $9,243,106.[12] Alternatively, if half of the higher labor costs were passed on to consumers, then corporate income tax revenue would fall by $4,621,553.

[11] The probability of job loss was calculated in the same manner as in the prior section.
[12] The corporate income tax for Missouri is available at: http://dor.mo.gov/business/corporate/

E. Impact on State and Local Sales Tax Revenue

To calculate the impact on state and local sales tax revenue the following approach was undertaken.[13] First, the total increase in worker earnings, adjusted for employment reductions, was calculated using the 2010-2011 ORG CPS. This figure was $152,246,540. Second, the increase in Missouri taxable sales was calculated as 25% of the earnings increase or $38,061,635. Third, the increase in sales tax revenue was calculated by multiplying the taxable sales change times the average state and local rate of 7.67% or $2,919,327.[14]

The higher minimum wage may decrease sales tax revenue to the extent that it reduces business profits, which will lower spending by business owners.

VI. Summary and Conclusions

I was asked by counsel to evaluate the fiscal impact of proposed statutory initiative petitions 2012-084 and 2012-085.

The results of my analysis indicate:

(1) labor costs to state and local government entities, based on state auditor fiscal notes, will rise by more than $1,352,182. A more inclusive estimate indicates that state and local government labor costs will increase by $16,003,712;

[13] The same general approach is used in the State Auditor's fiscal notes for the initiatives.
[14] The average rate comes from http://taxfoundation.org/news/show/27023.html

(2) unemployment benefit costs will rise by $4,397,510 during the first year of the minimum wage increase;

(3) individual income tax revenue will rise by at most $4,078,088;

(4) the loss in corporate income tax revenue could be as high as $9,243,105;

(5) state and local sales tax revenue will rise by at most $2,919,327;

(6) during the first year: state and local governments will incur increased costs of $20,401,222; the change in state and local government revenue will range from -$2,245,690 to +$6,997,415; and the net state and local government fiscal impact will range from -$22,646,912 to -$13,403,807.

FISCAL ANALYSIS
OF
PROPOSED STATUTORY INITIATIVE PETITIONS 2012-084 AND 2012-085

Presented, "Aging at Work: Employment Determination, Firm Strategies, and Public Policy in the United States," at the Western Economic Association meetings, July 1994.

Presented, "Why Did Male Pension Coverage Decline in the 1980s?" at the Western Economic Association meetings, July 1992.

Presented "Plant Size and the Decline of Unionism," at the Southern Economic Association meetings, 1989, with William Even.

Panel Discussant, Southern Economic Association meetings, November 1989.

Presented "The Labor Force Participation and Earnings Profiles of Married Female Immigrants," at the Southern Economic Association meetings, November 1988.

Presented "Pensions, Screening, and the Gender Wage Gap," at the Southern Economic Association meetings, November 1988.

Session Chair and Panel Discussant at the Southern Economic Association meetings, November 1988.

Participation in Invited Seminars, Conferences, and other Presentations

Presented, "Teaching Macroeconomics During Troubled Times," at Creative Ideas for Your Basic Economics Course Conference at Florida State University, February 2012.

Presented, "Participant Direction in Defined Contribution Pension Plans," at Pennsylvania State University, April 2010.

Presented, "The Parallels Between the Japanese Economic Crisis of the 1990s and the US Today" at Creative Ideas for Your Basic Economics Course Conference at Florida State University, February 2010.

Chair "Minimum Wage & EITC" Session at Society of Labor Economists meetings, May 2009.

Presented "Participant Direction in Defined Contribution Plans," at Lehigh University, April 2009.

Presented "Is Bigger Still Better?: The Decline of the Wage Premium at Large Firms," at Association of Private Enterprise Education meetings, April 2009.

Presented "The Growth of Participant Direction in Defined Contribution Pensions," at Trinity University, October 2008.

Presented "The Growth of Participant Direction in Defined Contribution Pensions," at Georgia State University, April 2008.

Presented "The Growth of Participant Direction in Defined Contribution Pensions," at Association of Private Enterprise Education meetings, April 2008.
Presented, "Improving Pension Coverage at Small Firms," at Hudson Institute, May 2006.

Presented, "Participant Direction in Defined Contribution Plans," at Society of Labor Economics meetings, May 2006.

Presented, "Participant Direction in Defined Contribution Plans," at Association of Private Enterprise Education meetings, April 2006.

Presented, "Participant Direction in Defined Contribution Plans," at University of Wisconsin-Milwaukee, April 2006.

Invited Panel Participant for Pepper Foundation and Center Symposium on pension reform, Washington, DC, February 2006.

Presented, "The Risk and Return of Pension Investments in Employer Stock," at West Virginia University, April 2005.

Presented, "The Risk and Return of Pension Investments in Employer Stock," at the University of Kentucky, November 2004.

Presented, "The Causes and Consequences of Company Stock Holdings in Pension Funds," at the Federal Reserve Bank of Atlanta, April 2004.

Presented, "The Causes and Consequences of Company Stock Holdings in Pension Funds," at the University of Oklahoma, February 2004.

Presented, "Tracking Union and Nonunion Wages in the U.S.: Can the Evidence be Reconciled?" at the Middlebury Annual Conference on Economic Issues, April 2002.

Presented, "How Will the Growth of DC and 401(k) Plans Affect Pension Income?" at the Miami University Center for Pension and Retirement Research Conference, June 2001.

Presented, "Benefits and Worker Productivity," Benefits for the Workplace of Tomorrow Conference, Wharton School, University of Pennsylvania, May 2001.

Participant, Innovations in Managing the Financial Risks of Retirement Conference, Wharton School, University of Pennsylvania, May 2000.

Presented "Using Hi-Tech in Large Lectures," at Association of Private Enterprise Education meetings, April 2000.

Presented "Employee Participation in 401(k) Plans," at University of Wisconsin-Milwaukee, October 1999.

Presented "Gender, Race, and Ethnicity in the Labor Market," as part of the Smith Chair course in Labor Economics at Brigham Young University, September 1999.

Presented, "The Decline in Pension Coverage Among Less Educated Workers," at the Florida State University Economics Department Seminar Series, 1996.

Presented, "Children's Effects on Women's Labor Market Attachment and Earnings" at the Conference on the Changes in Working Time in Canada and the United States, Canadian Employment Research Forum, 1996.

Presented, "Earnings, Rents, and Competition in the Airline Labor Market" at the Ohio State University Economics Department Seminar Series, 1996.

Presented, "Earnings, Rents, and Competition in the Airline Labor Market" at the Florida State University Economics Department Seminar Series, 1995.

Presented, "Employer Size and Labor Turnover: The Role of Pensions," at Syracuse University, 1995.

Presented, "Earnings, Rents, and Competition in the Airline Labor Market" while visiting scholar at the Federal Reserve Bank of Cleveland, 1995.

Presented, "Trends in Individual and Household Pension Coverage," at the Miami University Center for Pension and Retirement Research Conference, 1994.

Presented, "Racial Composition, Quality Sorting, and the Black-White Wage Gap" at the University of Wisconsin, Institute for Research on Poverty, Small Grants Workshop, 1993, with Barry Hirsch.

Presented, "Why Did Male Pension Coverage Decline in the 1980s?" at the Florida State University Economics Department Seminar Series, 1992.

Participant at National Bureau of Economic Research (NBER) Labor Studies meetings of the Summer Institute, 1992.

Presented, "Why Did Male Pension Coverage Decline in the 1980s?" at the Miami University Conference on Current Pension Policy Issues, 1992.

Organizer and participant at conference on "Contemporary Issues in Pension Economics," hosted by the Center for Pension and Retirement Research, Miami University, 1990.

Presented "The Effect of International Competition on Union and Nonunion Wages," at the University of Cincinnati Seminar Series, 1987.

Fiscal Note Summary

State and local governments estimate no direct costs or savings from the proposal, but operating costs could increase by an unknown annual amount that could be significant. State and local government tax revenue could change by an unknown annual amount ranging from a $2.9 million decrease to a $214 million increase depending on business decisions.

The Honorable Nicole Galloway
State Auditor
State Capitol Building
Jefferson City, MO 65101

RE: Petition approval request from Richard Von Glahn regarding a proposed statutory amendment to Chapter 290, Version 9 (2018-204)

Dear Auditor Galloway:

Enclosed please find an initiative petition sample sheet for a proposal to amend the Revised Statutes of Missouri filed by Richard Von Glahn on April 3, 2017.

We are referring the enclosed petition sample sheet to you for the purposes of preparing a fiscal note and fiscal note summary as required by Section 116.332, RSMo. Section 116.175.2, RSMo requires the state auditor to forward the fiscal note and fiscal note summary to the attorney general within twenty days of receipt of the petition sample sheet.

Thank you for your immediate consideration of this request.

Sincerely,

John R. Ashcroft

Be it enacted by the people of the state of Missouri:

Sections 290.502 and 290.527 of the Revised Statutes of Missouri are amended and a new section to be known as section 290.529 is enacted to read as follows:

290.502. 1. Except as may be otherwise provided pursuant to sections 290.500 to 290.530, effective January 1, 2007, every employer shall pay to each employee wages at the rate of $6.50 per hour, or wages at the same rate or rates set under the provisions of federal law as the prevailing federal minimum wage applicable to those covered jobs in interstate commerce, whichever rate per hour is higher.

2. The minimum wage shall be increased or decreased on January 1, 2008, and on January 1 of successive years, by the increase or decrease in the cost of living. On September 30, 2007, and on each September 30 of each successive year, the director shall measure the increase or decrease in the cost of living by the percentage increase or decrease as of the preceding July over the level as of July of the immediately preceding year of the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) or successor index as published by the U.S. Department of Labor or its successor agency, with the amount of the minimum wage increase or decrease rounded to the nearest five cents.

3. Except as may be otherwise provided pursuant to sections 290.500 to 290.530, and notwithstanding subsection (1) of this section, effective January 1, 2019, every employer shall pay to each employee wages at the rate of not less than $8.60 per hour, or wages at the same rate or rates set under the provisions of federal law as the prevailing federal minimum wage applicable to those covered jobs in interstate commerce, whichever rate per hour is higher. Thereafter, the minimum wage established by this subsection shall be increased each year by $.85 per hour, effective January 1 of each of the next four years, until it reaches $12.00 per hour, effective January 1, 2023. Thereafter, the minimum wage established by this subsection shall be increased or decreased on January 1, 2024, and on January 1 of successive years, per the method set forth in subsection (2) of this section. If at any time the federal minimum wage rate is above or is thereafter increased above the minimum wage then in effect under this subsection, the minimum wage required by this subsection shall continue to be increased pursuant to this subsection (3), but the higher federal rate shall immediately become the minimum wage required by this subsection and shall be increased or decreased per the method set forth in subsection (2) for so long as it remains higher than the state minimum wage required and increased pursuant to this subsection.

4. For purposes of this section, the term "public employer" means an employer that is the state or a political subdivision of the state, including a department, agency, officer, bureau, division, board, commission, or instrumentality of the state, or a city, county, town, village, school district, or other political subdivision of the state. Subsection (3) of this section shall not apply to a public employer with respect to its employees. Any public employer that is subject to subsections (1) and (2) of this section shall continue to be subject to those subsections.

290.527. Any employer who pays any employee less wages than the wages to which the employee is entitled under or by virtue of sections 290.500 to 290.530 shall be liable to the employee affected for the full amount of the wage rate and an additional [equal] amount equal to twice the unpaid wages as liquidated damages, less any amount actually paid to the employee by the employer and for costs and such reasonable attorney fees as may be allowed by the court or jury. The employee may bring any legal action necessary to collect the claim. Any agreement between the employee and the employer to work for less than the wage rate shall be no defense to the action. All actions for the collection of any deficiency in wages shall be commenced within [two] three years of the accrual of the cause of action.

290.529. Except in the circumstances set forth in section 290.523, all the provisions of sections 290.500 to 290.530 are severable. If any provision, including any section, subsection, subdivision, paragraph, sentence, or clause, of sections 290.500 to 290.530, or the application thereof to any person or circumstance, is found by a court of competent jurisdiction to be invalid, unconstitutional, or unconstitutionally enacted, such decision shall not affect other provisions or applications of sections 290.500 to 290.530 that can be given effect without the invalid, unconstitutional, or unconstitutionally enacted provision or application.

MISSOURI STATE AUDITOR'S OFFICE
FISCAL NOTE (18-204)

Subject

Initiative petition from Richard Von Glahn regarding a proposed amendment to Chapter 290 of the Revised Statutes of Missouri. (Received April 4, 2017)

Date

April 24, 2017

Description

This proposal would amend Chapter 290 of the Revised Statutes of Missouri.

The amendment is to be voted on in November 2018.

Public comments and other input

The State Auditor's office requested input from the **Attorney General's office,** the **Department of Agriculture,** the **Department of Economic Development,** the **Department of Elementary and Secondary Education,** the **Department of Higher Education,** the **Department of Health and Senior Services,** the **Department of Insurance, Financial Institutions and Professional Registration,** the **Department of Mental Health,** the **Department of Natural Resources,** the **Department of Corrections,** the **Department of Labor and Industrial Relations,** the **Department of Revenue,** the **Department of Public Safety,** the **Department of Social Services,** the **Governor's office,** the **Missouri House of Representatives,** the **Department of Conservation,** the **Department of Transportation,** the **Office of Administration,** the **Office of State Courts Administrator,** the **Missouri Senate,** the **Secretary of State's office,** the **Office of the State Public Defender,** the **State Treasurer's office, Adair County, Boone County, Callaway County, Cass County, Clay County, Cole County, Greene County, Jackson County, Jasper County, St. Charles County, St. Louis County, Taney County,** the **City of Cape Girardeau,** the **City of Columbia,** the **City of Jefferson,** the **City of Joplin,** the **City of Kansas City,** the **City of Kirksville,** the **City of Mexico,** the **City of Raymore,** the **City of St. Joseph,** the **City of St. Louis,** the **City of Springfield,** the **City of Union,** the **City of Wentzville,** the **City of West Plains, Cape Girardeau 63 School District, Hannibal 60 School District, State Technical College of Missouri, Metropolitan Community College, University of Missouri, St. Louis Community College, University of Central Missouri, Harris-Stowe State University, Lincoln University, Missouri State University, Missouri Southern State University, Missouri Western State University, Northwest Missouri State University, Southeast Missouri State University, Truman State University, Kansas City Board of Police Commissioners, The Metropolitan Police Department - City of St. Louis,** the **St. Louis County Board of Elections,** the **Board of Election**

Commissioners City of St. Louis, the **Kansas City Board of Election Commissioners,** the **Platte County Board of Elections,** the **Jackson County Election Board,** and the **Clay County Board of Election Commissioners**.

Lara Granich and **Missouri Jobs with Justice Voter Action** provided information as proponents of the proposal to the State Auditor's office.

Robert Bonney, Chief Executive Officer of the Missouri Restaurant Association provided information as an opponent of the proposal to the State Auditor's office.

Assumptions

Officials from the **Attorney General's office** indicated they expect that, to the extent that the enactment of this proposal would result in increased litigation, they can absorb the costs associated with that increased litigation using existing resources. However, if the enactment of this proposal were to result in substantial additional litigation, they may request additional appropriations. They do not expect that the enactment of this proposal would result in any other increased costs to their office.

Officials from the **Department of Agriculture** indicated there is no fiscal impact to their department for this initiative petition.

Officials from the **Department of Economic Development** indicated no impact to their department.

Officials from the **Department of Higher Education** indicated this initiative petition would not have a fiscal impact on their department since public employers are exempt from the new provisions proposed.

Officials from the **Department of Health and Senior Services** indicated this proposal would have no direct fiscal impact on their department since government employees are exempt from its provisions. However, employees of certain entities that receive funding through the department's budget would be impacted, such as Medicaid Home and Community Based Services vendors/providers and Area Agencies on Aging.

Officials from the **Department of Insurance, Financial Institutions and Professional Registration** indicated this petition, if passed, will have no cost or savings to their department.

Officials from the **Department of Mental Health** indicated this proposal creates no direct obligations or requirements to their department that would result in a fiscal impact.

Officials from the **Department of Natural Resources** indicated their department defers to the Office of Administration to determine the fiscal impact of this proposal.

Officials from the **Department of Corrections** indicated they defer to the Office of Administration.

Officials from the **Department of Labor and Industrial Relations** indicated no fiscal impact on their department.

Officials from the **Department of Revenue** indicated this petition will have no fiscal impact on their department. Their department defers to the Office of Administration for a state impact.

Officials from the **Department of Public Safety - Office of the Director** indicated they will defer to the response provided for this initiative petition by the Office of Administration - Human Resources.

Officials from the **Department of Social Services** indicated no fiscal impact on their department. They defer to the Office of Administration.

Officials from the **Governor's office** indicated there should be no added cost or savings to their office.

Officials from the **Missouri House of Representatives** indicated no fiscal impact to their office.

Officials from the **Department of Conservation** indicated that no adverse fiscal impact to their department would be expected as a result of this proposal.

Officials from the **Department of Transportation** indicated unknown fiscal impact.

Officials from the **Office of Administration** indicated the proposal amends Sections 290.502 and 290.527 and adds Section 290.529, RSMo.

Section 290.502, RSMo, increases the minimum wage to $8.60 per hour, beginning January 1, 2019 and by another $0.85 per hour each year until it reaches $12.00 per hour beginning January 1, 2023. Thereafter, the minimum wage will be adjusted annually based on the increase/decrease in the cost of living.

The proposal exempts public employers from the requirements; therefore, there would be no cost to the State of Missouri.

Because no tax rates are affected, there is no direct impact on general and total state revenues. However, these proposals may have several indirect affects, which could impact revenue collections by an unknown amount, including but not limited to:

- Increased wages for certain employees. According to the US BLS, in 2015, Missouri had 57,000 hourly employees earning wages at or below the federal minimum wage;[1]
- Increased consumption by those employees;
- Lower overall employment (if employers choose to hold costs steady);

[1] http://www.bls.gov/opub/reports/minimum-wage/2015/home.htm

- Lower business investment (if employers' payrolls increase);
- Increased prices as firms pass–through labor costs.

This proposal should not impact their office.

Officials from the **Office of State Courts Administrator** indicated there is no fiscal impact on the courts.

Officials from the **Missouri Senate** indicated no fiscal impact on their office.

Officials from the **Secretary of State's office** indicated their office is required to pay for publishing in local newspapers the full text of each statewide ballot measure as directed by Article XII, Section 2(b) of the Missouri Constitution and Section 116.230-116.290, RSMo. Their office is provided with core funding to handle a certain amount of normal activity resulting from each year's legislative session. Funding for this item is adjusted each year depending upon the election cycle with $1.3 million historically appropriated in odd numbered fiscal years and $100,000 appropriated in even numbered fiscal years to meet these requirements. Through FY (fiscal year) 2013, the appropriation had historically been an estimated appropriation because the final cost is dependent upon the number of ballot measures approved by the General Assembly and the initiative petitions certified for the ballot. In FY 2015, the General Assembly changed the appropriation so that it was no longer an estimated appropriation. In FY 2017 their office was appropriated $2.6 million to publish the full text of the measures. In FY 2017, at the August and November elections, there were 6 statewide Constitutional Amendments or ballot propositions that cost $2.4 million to publish (an average of $400,000 per issue). Their office will continue to assume, for the purposes of this fiscal note, that it should have the full appropriation authority it needs to meet the publishing requirements. Because these requirements are mandatory, they reserve the right to request funding to meet the cost of their publishing requirements if the Governor and the General Assembly again change the amount or continue to not designate it as an estimated appropriation.

Officials from the **Office of the State Public Defender** indicated this initiative petition will not have any significant impact on their office.

Officials from the **State Treasurer's office** indicated they do not predict an immediate fiscal impact upon their office if Missouri's minimum wage rate were increased to $12.00 per hour. However, the potential future impact of applying cost of living increases and/or increases in the federal minimum wage to a Missouri minimum wage of $12.00 per hour, as called for elsewhere in Section 290.502, RSMo., is unknown.

Officials from **Greene County** indicated there are no estimated costs or savings to report from their county for this initiative petition.

Officials from the **City of Kansas City** indicated this petition may have a small negative fiscal impact on their city as a result of the increased hourly minimum wage being higher than the hourly rate paid some city employees.

Officials from the **City of Raymore** indicated no fiscal impact.

Officials from **University of Missouri** indicated they are not able to estimate any significant financial impact on their university.

Officials from **University of Central Missouri** indicated they estimate no fiscal impact since they are excluded under the public employer definition in section 4.

Officials from the **Missouri State University** indicated no fiscal impact.

Officials from **Missouri Southern State University** indicated they do not anticipate any fiscal impact from this initiative petition.

Officials from **Missouri Western State University** indicated the wording is unclear as to whether Colleges/Universities are included in this petition. In assuming they are included, they calculate the following significant fiscal impact to their university. The proposal will have a severe negative impact on the university. The proposed minimum wages increases beginning in 2019 at $8.60 per hour; with .85 increases for the next four years, 2023 @ $12.00 an hour, they project the overall increase in payroll expenditures to be in access of $200,000.00 in 2019 and more than $1,000,000.00 by 2023; resulting in the severe negative fiscal impact.

Officials from the **Kansas City Board of Election Commissioners** indicated no fiscal effect on their operations.

Officials from the **Platte County Board of Elections** indicated no fiscal impact.

Officials from the **Jackson County Election Board** indicated this petition does not have a fiscal impact on their office.

Lara Granich and **Missouri Jobs with Justice Voter Action** provided the following information as proponents of this initiative petition.

Version 33	2018 - 199	$13 by 2023 (Start at $9; $1/year)	Yes	Yes	60%	Yes

This letter is from Lara Granich and Missouri Jobs with Justice Voter Action, proponents of the above-referenced Minimum Wage Initiative Petitions. Pursuant to RSMo. Section 116.175, we write to submit the following fiscal impact information to assist your office in its analysis of the fiscal impact of the above-mentioned seven proposed Minimum Wage Initiative Petitions.

Our analysis estimates the impact of the proposed Minimum Wage Initiative Petitions on state and local sales and personal income tax revenue in Missouri. We follow the process that has been used in the past to estimate the impact of minimum initiative petitions on state and local sales and personal income tax revenue, with some refinements. We also address certain claims that have been made by opponents of similar initiative petitions in the past.

As these petitions exclude public workers from the proposed minimum wage increases, we do not include in our analysis an estimate of the impact on state and local payroll costs of the proposed Minimum Wage Initiative Petitions.

I. Estimate of Number of Workers Affected Statewide and the Impact on Their Wages

Table 1. Summary of the Number of Affected Workers and Aggregate Wage Increases for Missouri in the Final Year of Minimum Wage Implementation.

Proposal	Year of Peak Minimum Wage (MW)	Proposed Peak MW	Tipped MW in Peak MW Year	Workers Affected by MW increase	Aggregate Annual Wage Increase in Nominal Dollars
13,14,15[a]	2023	$ 12.00	$ 6.00	835,350	$4,358,798,129
16,17,18[a]	2024	$ 12.00	$ 6.00	819,652	$4,209,438,048
19,20,21[a]	2025	$ 13.00	$ 6.50	900,788	$5,309,336,662
22,23,24[a]	2022	$ 11.00	$ 5.50	738,515	$3,347,138,756
25	2021	$ 11.00	$ 5.50	761,164	$3,469,534,559
26	2022	$ 12.00	$ 6.00	852,284	$4,510,285,824
27	2023	$ 13.00	$ 6.50	949,801	$5,667,065,534
28	2024	$ 12.00	$ 9.60	832,328	$4,288,614,460
29	2025	$ 13.00	$ 7.80	905,942	$5,332,471,496
30	2022	$ 12.00	$ 8.40	864,090	$4,558,317,729
31	2022	$ 12.00	$ 6.84	855,887	$4,523,341,931

32	2023	$ 13.00	$ 9.75	948,421	$5,745,051,956
33	2023	$ 13.00	$ 7.54	942,566	$5,685,951,766

Notes: Author's Analysis of American Community Survey (ACS) Data from 2014.
(a) Since these proposals only vary on non-economic factors, their economic and fiscal impacts are treated as equal for the purposes of this report.

Across the proposals analyzed, the total aggregate wage increase for workers in Missouri ranges from a low of $3.347 billion (Proposals 22-24) to a high of $5.745 billion under Proposal 32. While some proposals have the same final impact numbers, they have different impacts in the initial years (not listed) based on the relative pace of increases in earlier years. A full, year-by-year impact analysis is presented in Appendix Tables A1 through A13 below.

The wage impact of an increase in the minimum wage for the state of Missouri is calculated using the following procedure. The American Community Survey (ACS) Public Use Micro Sample for the most recent year available (2014) for the state of Missouri was downloaded from the US Census Bureau. The American Community Survey was chosen over the Current Population survey because the ACS has a significantly larger sample. We followed the method of Perry, Thomason, and Bernhardt (2016) for calculating an hourly wage rate from the ACS based on observed total annual wage income, typical hours worked each week and weeks worked per year. Since ACS income figures are clustered around whole-numbers, we smoothed the wage distribution by randomly adding or subtracting $0.25 from each wage figure.

Wage adjustments were made only for those individuals earning less than the proposed minimum wage, or proposed tipped minimum wage. We did not make additional adjustments for the "ripple effect" of minimum wage increases on workers earning slightly above the new threshold. Recent evidence suggests that workers earning up to 15 percent above of the minimum wage also receive small increases in response to a minimum wage increase. (See Wicks-Lim (2006) and Dube, Giuliano and Leonard (2015).) Thus, the estimated impacts listed above are likely to be smaller than the actual impact of increasing the minimum wage to the proposed level.

The proposed minimum wage increases exclude public employees. However, it was not practicable to exclude public employees from these calculations because the ACS does not have a published variable that allows for identification of public employees. Nonetheless, this inclusion of public employees should have only a minimal impact on our results, since their numbers are small and most already earn more than the proposed minimum wage increases.[1]

All wages from the 2014 survey were adjusted upward to account for inflation between the time of the survey and the time of measurement of the impact. Actual rates of inflation were used to adjust wages up to 2016. For all subsequent years between 2017 and 2028, baseline wages were adjusted using the projected annual average rate of change in the Consumer Price Index for Urban Workers (CPI-U) for the Midwest region. The 2015 and 2016 Missouri Minimum wage of $7.65 was adjusted by the same factor prior to measuring the impact of a change to the proposed minimum wage in 2019.

After these adjustments, the resulting hourly wage of all employees was compared to the proposed minimum wage. A total of twenty-one proposals were analyzed. For each proposal, we constructed a baseline wage scenario that used only basic wage changes from expected inflation rates to predict each ACS respondent's hourly wage rate in each year

[1] For Missouri's state employees, this can be validated by viewing the earnings of all state employees at: http://mapyourtaxes.mo.gov/MAP/Employees/. In larger counties and cities most all public employees already earn more than the highest proposed minimum wage. Smaller counties and towns may have some public employees who earn less than the highest proposed minimum.

between 2019 and 2028. We then constructed a counterfactual, or "proposed" wage distribution for each worker under all twenty-one minimum wage proposed scenarios. Since the minimum wage proposals offer nine different paths for raising the minimum wage for all non-tipped private sector workers, and different wage paths for tipped workers, we create separate minimum wage changes for tipped and non-tipped workers. Specifically, we used information on a worker's occupation and observed wage levels to separately identify tipped workers and assign them the proposed tipped minimum wage in each year, rather than the higher non-tipped minimum wage.[2]

If the proposed minimum wage was less than the inflation-adjusted hourly earnings of an employee, then no impact was calculated. If the proposed minimum wage was more than the hourly earnings for an employee, then the difference between the inflation-adjusted hourly earnings (i.e. baseline) and the proposed minimum wage was calculated. That difference was multiplied by the number of hours the employee worked in the year to calculate the annual impact for that employee. The result was then multiplied by a weighing factor for that employee in the population. The total impact for the state of Missouri was then summed across all affected workers to generate a total estimated increase in wage income in the state.

We do not include an estimate of job losses due to minimum wage changes. Existing research is clear that past minimum wage increases have had no measurable effect on aggregate employment levels. Larger minimum wage increases, such as those in Los Angeles, Seattle, and other jurisdictions, have not yet been studied to detect a clear disemployment effect. While it is possible that there may be some employment losses due to automation or other factors, this potential negative effect is likely offset by the positive potential job growth stemming from multiplier effects of the spending of minimum wage workers who receive substantial raises. There is substantial research to indicate that increases in the minimum wage have multiplier effects that increase the direct effects. For this reason and because of the likely increases in wages for individuals who earn above the proposed minimum wage rates, the impacts summarized in the table are considered conservative estimates relative to the total impact that would occur as a result of increasing the minimum wage to the proposed levels.

II. Economic Literature on the Impact of Minimum Wage Increases on Employment

Next, it is necessary to review the economic literature on the impact of minimum wage increases on employment. Opponents often claim that minimum wage increases may reduce employment in a state. If that is true, then those employment reductions would result in reductions in state income and sales tax revenue. However, review of the most credible recent empirical research on the minimum wage shows that increases in the minimum wage have had no discernible impact on employment. We thus conclude that it is not appropriate to project that the proposed initiative petitions would result in any detectable employment reduction, and resulting losses in income and sales tax revenue, or increases in unemployment-related costs to the state.

Economists have conducted hundreds of studies of the employment impact of the minimum wage. A recent meta-study – a formal statistical study of studies – by Doucouliagos and Stanley (2009) reviewed all the research conducted over the last three decades on the employment impact of minimum wage increases on teenagers in the United States. The researchers concluded that the minimum wage has little or no discernible effect on the employment prospects of low-wage workers. Their study followed a rigorous, peer-reviewed procedure and has the advantage of using a set of predetermined, objective criteria for weighing the validity of statistical findings across studies with different results.

[2] We defined tipped workers as those employed in occupations that typically receive a large share of income as tips. These occupations were 'Bartenders' (4040), 'Waiters and Waitresses', 'Food Servers, Non-restaurant' and 'Miscellaneous food preparation and serving related workers including dining room and cafeteria attendants and bartender helpers'.

(Source: Doucouliagos, Hristos and T. D. Stanley. 2009. "Publication Selection Bias in Minimum-Wage Research? A Meta-Regression Analysis." British Journal of Industrial Relations,vol. 47, no. 2, pp. 406-428.)

Recent theoretical and empirical research emphasizes several explanations for the consistently negligible employment impacts of moderate increases in the minimum wage. First, relative to total wage costs, minimum-wage increases are small. Second, employers and workers appear to respond to minimum-wage increases in many ways that reduce the direct cost to employers and substantially reduce or eliminate the need to cut employment.

Probably the most important economic response to a higher minimum wage is a reduction in turnover. At higher wages, employers fill vacancies faster and retain employees longer, boosting total employment and average productivity per worker while reducing direct and indirect training costs. Dube, Lester, and Reich (2012), for example, examined the effect of the minimum wage on labor turnover among teens and restaurant workers. They find "...striking evidence that separations, new hires, and turnover rates for teens and restaurant workers fall substantially following a minimum wage increase..." (p. 2). Their findings, using nationally representative data, are consistent with local case studies of the minimum wage and related "living wage" laws, including Dube, Naidu, and Reich's (2007) analysis of the San Francisco city-wide minimum wage; Fairris's (2005) study of local government contractors in Los Angeles; Howes (2005) on homecare workers in California; and Reich, Hall, and Jacobs (2005) on workers at the San Francisco airport.
(Sources: Dube, Arindrajit, T. William Lester, and Michael Reich. 2012. "Minimum Wage Shocks, Employment Flows and Labor Market Frictions." Berkeley, CA: Institute for Research on Labor and Employment. http://escholarship.org/uc/item/76p927ks; Dube, Arindrajit, Suresh Naidu, and Michael Reich. 2007. "The Economic Effects of a Citywide Minimum Wage." *Industrial and Labor Relations Review*, vol. 60, no. 4, pp. 522-543; Fairris, David. 2005. "The Impact of Living Wages on Employers: A Control Group Analysis of the Los Angeles Ordinance." *Industrial Relations*, vol. 44, no. 1, pp. 84-105; Howes, Candace. 2005. "Living Wages and the Retention of Home Care Workers in San Francisco." *Industrial Relations*, vol. 44, 5 no. 1, pp. 139-163; Reich, Michael, Peter Hall, and Ken Jacobs. 2005. "Living Wage Policies at the San Francisco Airport: Impacts on Workers and Businesses." *Industrial Relations*, vol. 44, no. 1, pp. 106-138.)

Employers also appear to respond to increases in the minimum wage by taking measures to boost productivity. Hirsch, Kaufman, and Zelenska's (2011) study of the impact of the federal minimum wage increase on 81 fast-food restaurants in Georgia and Alabama, for example, asked fast-food managers about the scope for efficiency improvements in response to the minimum-wage rise. About 90 percent of managers indicated that they planned to respond to the minimum wage increase with increased performance standards such as "requiring a better attendance and on-time record, faster and more proficient performance of job duties, taking on additional tasks, and faster termination of poor performers." (p. 27) Roughly the same share of managers said that they sought to "boost morale" by presenting the minimum wage increase as a "challenge to the store" and using this as a way "to energize employees to improve productivity." (pp. 28-29) Based on their interviews with store managers, the researchers concluded that a minimum wage increase may function as a "catalyst or shock that forces managers to step out of the daily routine and think about where cost savings can occur." (p. 29) (Source: Hirsch, Barry T., Bruce Kaufman, and Tetyana Zelenska, "Minimum Wage Channels of Adjustment." IZA Discussion Paper No. 6132. Germany: Institute for the Study of Labor. http://www2.gsu.edu/~ecobth/IZA_HKZ_MinWageCoA_dp6132.pdf)

A higher minimum wage may also motivate workers to work harder, independently of any actions by employers to increase productivity. According to "efficiency wage" theory, wages above the competitive-market rate may elicit greater work effort for several reasons. As Carl Shapiro and Joseph Stiglitz (1984) have argued, higher pay increases the cost to workers of losing their job, potentially inducing greater effort from workers in order to reduce their chances of

being fired. George Akerlof (1982), arguing from a more sociological point of view, has suggested that workers may see higher wages as a gift from employers, leading workers to reciprocate by working harder. (Sources: Shapiro, Carl and Joseph E. Stiglitz. 1984. "Equilibrium unemployment as a worker discipline device." *American Economic Review*, vol. 74, no. 3, pp. 433-444; Akerlof, George A. 1982. "Labor contracts as partial gift exchange." *Quarterly Journal of Economics*, vol. 97, no. 4, pp. 543-569.)

We therefore conclude that the proposed increase in the Missouri minimum wage would have no discernible impact on the employment levels of low-wage workers. Accordingly, we do not factor in reductions in employment, or any resulting decrease in sales tax or income tax. We also do not project any increased unemployment insurance costs – both because we do not project any resulting job losses, and, additionally, because unemployment insurance costs are paid for by employer premiums, and so are ultimately not a cost to the state.

For similar reasons, we do not believe that the proposed increase will have any significant adverse economic impact on small businesses or, by extension, on corporate income tax revenue. In fact, many small businesses already pay little if any corporate income tax.

III. State and Local Sales and Personal Income Tax Revenue Impact of Raising the Minimum Wage

Based on the wage impact figures calculated above, and the understanding that the minimum wage increases would be unlikely to result in offsetting job losses, we next calculate the impact of the projected wage increases on state and local sales and personal income tax revenue in Missouri. We project only the direct impact of the various minimum wage increase scenarios on such tax revenue. We do not attempt to project the additional impact through a GDP multiplier effect, or the potentially higher sales taxes generated if employers offset wage increases with higher prices (which would be taxable).

Personal Income Tax Revenue. In order to determine the projected increase in personal income tax revenues that would result directly from the increased wages, we had to develop assumptions about the effective income tax rates of the affected workers. We made the following assumptions with respect to the effective tax rate:

1. That 25% of affected workers can be claimed as a dependent on another party's Missouri income tax return and, as a result, would pay an effective tax rate of 6.0% on the increase in income;
2. That 50% of the affected workers would file as single taxpayers, would claim one deduction of $2,100, and would be entitled to a standard deduction of $5,800. This would result in an effective tax rate of 2.47%;
3. The remaining 25% would, we assumed, pay no additional Missouri income tax.

In light of these assumptions, the increased Missouri income tax revenue for each petition version can be calculated as follows: (total wage increase * 25% * 6.0%) + (total wage increase * 50% * 2.47%) + (total wage increase *25% * 0%).

Sales Tax Revenue. The state of Missouri imposes a 4.225% state sales tax on those items that are not exempt from the sales tax base. In addition, the average local sales tax rate is 2.95%. As a result, the average Missouri net sales tax rate is 7.175%. To estimate the share of income that is spent on goods and services that are subject to sales taxes, we used data from the 2015 Consumer Expenditure Survey (CES) for the US to estimate the share of income spent on categories that are subject to sales taxes. The CES summary tables list average spending per consumer across 20 different

categories (e.g. housing, transportation, food away from home) and we categorized each spending item as taxable or non-taxable and then calculated the share of spending that we taxable.[3] The resulting rate was 30.3 percent.

Based upon the above assumptions, and the total wage increase calculations for each version of the petition, we estimate that the increase in state income tax revenue resulting from the increased wages would be as follows:

Table 2. Summary of the Impact of Minimum Wage Increases on State and Local Sales and Income Taxes in Year of Full Minimum Wage Final Implementation.

Proposal	State Sales Tax (4.225%)	Local Sales Tax Revenue (2.95%)	Total Sales Tax Revenue Increase	Personal Income Tax Revenue	Total Sales and Personal Income Tax Revenue Increase
13,14,15[a]	$55,814,587	$38,971,132	$94,785,719	$119,213,129	$213,998,848

Note: Author's Analysis of American Community Survey (ACS) data from 2014 and fiscal impact assumptions described above. All dollars are in nominal figures. (a) Since these proposals only vary on non-economic factors, their economic and fiscal impacts are treated as equal for the purposes of this report.

As described in Table 2 above, the fiscal impact of the proposed minimum wage increases varies based on the ultimate level of the minimum wage and the degree of tipped minimum wage phase out. The estimates of the total fiscal benefit range from $164 million to $282 million annually. Appendix tables A1 through A13 provide a year-by-year summary of the fiscal benefits.

[3] Specifically, the categories we assumed to be subject to state and local sales taxes are: food, household furnishings and equipment, vehicle purchases, gasoline and motor oil, entertainment, and all other expenditures. We assumed that 50 percent of the spending on the category "apparel and services" was taxable.

We hope that this information is useful to your office as your prepare your analyses of the petitions.

Respectfully submitted,

Lara Granich

Robert Bonney, Chief Executive Officer of the Missouri Restaurant Association provided the following information as an opponent of this initiative petition.

These corrections were subsequently provided to the submitted information

In the table on the bottom of page 7 and top of page 8, both averages for 2023 should be based on a 5 year phase-in. Accordingly, the figure on that table should state for 2023 ($12) Average Annual Unemployment Premiums Paid by State of $16,269,523.52.

The corresponding change on the table on page 12 would be to state, for 2023 ($12) Total Net Loss to State Government from Taxes and Unemployment Insurance of ($19,137,851.76).

Re: Initiative Petitions 2018-196 through 2018-216

Dear Mr. Halwes,

I write on behalf of Robert Bonney. Mr. Bonney is the Chief Executive Officer of the Missouri Restaurant Association. Please consider this letter and the accompanying studies as his fiscal impact statement as an opponent of Initiative Petitions 2018-196 through 2018-216 (the "Initiative Petitions"). If passed, any of these twenty-one initiatives would have a substantial negative impact on state and local governments, as well as Missouri small businesses. Those effects are both direct (as noted in Section 1) and secondary (as noted in Sections 2 through 5). The direct effects stem from higher labor and contracting costs that the state and its political subdivisions will incur, despite the Initiatives' effort to exclude government workers from the mandate.

The indirect effects will present a debate this Office has seen before. The proponents of the Initiative Petitions will once again rely on data sourced from political activist groups who claim increases in the minimum wage only serve to create new taxable income. The reality is that such groups approach this issue with political bias. Their analysis is one-sided because it completely ignores the fact that a wage increase does not "create" income from thin air; instead, it is an economic transfer from Missouri businesses to workers. Missouri businesses must pay the new wages "created" by the increases. Political activists' models fail to account, then, for two specific manifestations of the "debit" side of this transfer: reductions in employment, and the reduction in corporate income tax paid based upon business done in Missouri.

The failure to account for any employment effect at any proposed wage increase—even a drastic increase of the minimum wage to $13—is particularly puzzling, because Missouri's most populous areas border Illinois and Kansas. These states, respectively, have minimum wages of $8.25 and $7.25. Neither state adjusts the minimum wage for inflation. Likewise, the second effect—loss of corporate income tax revenues—is a mathematical certainty. Missouri businesses will be the source of the wage increase, which will lower their own taxable income. Assuming a one-to-one substitution of "created" wages for lost corporate income, the difference in the rates

at which these two types of income are taxed will result in a net decrease in state revenue. A dollar from increased wages is taxable by state government in Missouri at 6% or substantially less, whereas Missouri's corporate income tax rate is 6.25%.

On top of these two types of negative outcomes—lower employment and lower state tax revenues—there may be second-order effects to small businesses because they lack the access to capital to weather price fluctuations; they may not survive at all because they may not have the flexibility to simply cut employment, shifting their reliance to capital instead of labor resources, or suffering a decrease in production and revenue.

In short, much of the fiscal impact regarding the current crop of wage-related ballot measures is secondary: they cause transfers of wealth within (or out of) the state economy, and those transfers of wealth then create second-order effects for state and local governments via their collection of tax revenues and provision of welfare services for the unemployed or less-employed. Because these fiscal notes call for the Auditor operate in the area of secondary effects, it is critical that she treat both sides of the wealth transfer equally, and refrain from assessing only one half of the wage increase equation.

1. Direct Labor Cost Impact on State and Local Government Budgets

As noted to the State Auditor's Office previously by Dr. David Macpherson, a nationally prominent labor and economics expert, there are two ways to measure labor cost on state and local government budgets. First, one can use the information included in fiscal note responses from state and local government entities. It is important to note that these fiscal notes provide an incomplete and, therefore, too-low estimate of labor cost. Few state and local government entities respond to requests for a fiscal note response, and those that do respond often ignore important effects.

Second, data from the U.S. Census Bureau's Current Population Survey (CPS) can be used to calculate increased labor cost to state and local government entities in Missouri. To combat this time-honored analysis, and in a blatant attempt to manipulate the fiscal note process, the Initiative Petitions provide that they will raise the minimum wage for private workers, but not for workers employed by state or local governmental entities. No conceivable justification exists for solely raising the minimum wage on private businesses. Whatever the disparity between the value of total compensation at a private business and at a government employer, that disparity does not approach the wage adjustments at issue here, ranging from an inflation adjusted wage increase of 51.16% (($13-$8.60)/$8.60) in Initiative Petitions 2018-198 through 2018-201 to a wage increase of 30.17% (($11-$8.45)/$8.45) in Initiative Petitions 2018-213 through 2018-215.

Moreover, it is unreasonable to assume that on a sustained basis public employers, as defined in the Initiative Petitions, would be able to maintain dramatically lower wage levels than private businesses. Public employers would lose staff employable at higher rates in the private market, imposing substantial costs on government productivity. Using the method traditionally employed by labor economists and followed by the Auditor's office, one can calculate the annual

wage costs to state and local governmental entities, based on the annual wage cost for each state and local government worker in the ORG CPS, as detailed on page 6 of Dr. Macpherson's 2012 report, attached hereto as **Exhibit A**. Even if the auditor finds that a specific estimate of costs is not determinable, the auditor should note that state and local government "operating costs could increase by an unknown annual amount that could be significant," through the form of higher wage costs and higher contracting costs.

The proponents of the Initiative Petitions may argue that the Auditor should abandon any state and local cost estimates altogether. The proponents will argue that provisions they have inserted in the statute would mean that state and local government entities will not have to pay higher wages to their employees. Setting aside unjustifiable discrimination against private employers (and "public employees"), the provision is of uncertain legal effect and constitutionality. A "public employer," defined in the initiatives as "the state or a political subdivision of the state" still incurs substantial costs for wages of individuals that are "private employees," rather than "public employees." Cleaning services, food service, and other essential services often rely on state contracts with outside vendors. Sometimes, a contract rate may vary depending on the cost of labor. Even if the contract rate is fixed, it must be re-bid periodically, and that bidding process would take into account the new minimum wage. Plainly, the initiative would impose higher costs for state and local governments in contracting with any private entity and its employees. As a matter of law, it would be insufficient and unfair for the Auditor's fiscal note or summary to simply assume that these costs to state and local governmental entities do not exist.

2. Cost of Unemployment Benefits

a) The effect of inflation on Missouri's minimum wage

CPS–ORG data show that between 2007 and 2015, median nominal wages for adult (25–59 years old) workers in the U.S. grew by 1.68 percent a year. However, Missouri's minimum wage is currently adjusted using "the percentage increase or decrease as of the preceding July over the level as of July of the immediately preceding year of the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W)." Section 290.502, RSMo. Coincidentally (or perhaps not), the CPI-W, over the period from 2006 to 2016, also increased at an average rate of 1.68 percent a year.

Year	CPI-W	Observed inflation %
2006	199.2	
2007	203.7	0.022590361
2008	216.304	0.061875307
2009	210.526	-0.0267124

2010	213.898	0.016017024
2011	222.686	0.041085003
2012	225.568	0.01294199
2013	230.084	0.02002057
2014	234.525	0.019301646
2015	233.806	-0.00306577
2016	234.771	0.004127353

Using Missouri's current inflation-adjusted minimum wage rate and an assumed, constant 1.68 percent increase in the CPI-W, the minimum wage in Missouri will be as follows:

Year	Estimated Minimum Wage
2016	$7.65 (observed)
2017	$7.70 (observed)
2018	$7.85
2019	$8.00
2020	$8.15
2021	$8.30
2022	$8.45
2023	$8.60
2024	$8.75
2025	$8.90
2026	$9.05

b) Calculating job loss attributable to increased minimum wage

At least one outside economist, James Sherk, has already provided an estimate for job loss in Missouri based on a $15 minimum wage. Mr. Sherk calculated the effect of a $15 minimum wage implemented in 2021. Mr. Sherk's figures accounted for inflation by estimating the present value of $15.00 in 2021, rather than estimating an absolute figure for wage inflation in Missouri. Mr. Sherk calculated the present value of $15.00 in 2021 to be $13.57, per hour, based on wage inflation of 1.68 percent. Mr. Sherk evaluated the change from $7.65 per hour to $13.57 per hour (a 77.39% increase), exclusive of agricultural workers. Cumulatively, Mr. Sherk calculated this 77.39 percent increase in wages to reduce employment in the affected workforce by (0.7739*0.677) 52.39%.

Graves Garrett LLC

Mr. Sherk calculated that approximately 40.9% of Missouri's Wage and Salary Workers would be affected by such a $15 minimum wage. Mr. Sherk's calculations reveal that a $15 minimum wage in 2021 would be expected to reduce the number of full-time equivalent jobs in Missouri by approximately 218,000. Based on CPS–ORG data, these figures reveal an affected workforce of approximately 416,086 workers impacted by a $15 minimum wage increase in 2021.

However, in 2014, Dr. Macpherson found, using more conservative, national-level Congressional Budget Office data, that an increase to a $10.10 minimum wage, effective January 1, 2015, would eliminate about 15,700 jobs in Missouri. Dr. Macpherson analyzed the effect of a Missouri $10.10 minimum wage using a model suitable to a national analysis. This analysis predicted a loss of 15,700 Missouri jobs based on a wage increase from $7.50 in 2014 to $10.10 in 2015 (a 34.67% increase).

On the whole, the analysis by Mr. Sherk is more instructive here, since it is more recent, Missouri-specific, and anticipates larger wage changes contemplated by the Initiative Petitions. The most accurate way to determine the estimate of Workers Affected would be to analyze the CPS–ORG data. However, without such data readily available in the time constraints imposed by the fiscal note process, it is reasonable for estimation purposes to assume Mr. Sherk's figures are evenly distributed. Assuming that worker data follows an equal distribution, the Initiative Petitions would be expected to result in the following job losses:

Year of final prescribed wage increase	Wage without IP	Wage mandated by IP	Percentage increase	Percentage of affected workers who lose jobs (Percentage Increase x 0.677 Elasticity)	Estimate of Workers Affected	Estimate of Missouri Workers Unemployed by Initiative
2021	$8.30	$11.00	32.53%	22.02%	174,897	38,512
2022	$8.45	$11.00	30.18%	20.43%	162,262	33,150
2022	$8.45	$12.00	42.01%	28.44%	225,866	64,236
2023	$8.60	$12.00	39.53%	26.77%	212,532	56,895
2023	$8.60	$13.00	51.16%	34.64%	275,061	95,281
2024	$8.75	$12.00	37.14%	25.15%	199,683	50,220
2024	$8.75	$13.00	48.57%	32.88%	261,136	85,861
2025	$8.90	$13.00	46.07%	31.19%	247,695	77,256
2026	$9.05	$13.00	43.65%	29.55%	234,683	69,349

c) The best estimate for a price elasticity of demand for low-skilled labor is -0.677.

As noted by Mr. Sherk, starting wages of $15.00 per hour mean that full-time employee must create at least $38,700 a year in value for his or her employer (including wages, employer payroll taxes, and mandatory healthcare benefits). High minimum wages and mandatory benefit costs make it much harder for less-experienced and less-skilled workers to find jobs, particularly full-time work.

Recent labor economics scholarship has revealed that, accounting for publication bias, a state-specific elasticity of demand for less-skilled workers is, on average, approximately -0.677, though some estimates are even higher, around -1.0.[1] "[E]conomists have extensively studied how businesses respond to higher wages overall, not just minimum-wage increases. On average these studies find a 10 percent increase in labor costs causes firms to reduce employment of less-skilled workers by 6.8 percent in the long run."[2]

While these elasticity estimates are substantial in absolute terms, there is reason to believe that such estimates might still understate the impact of a Missouri state-specific effort to increase the minimum wage. This is so for several reasons. First, traditionally, labor economists view labor as a reasonably difficult input to substitute; however, Missouri businesses have readily available options. There are relatively few barriers to doing business in Missouri's border states, and businesses can easily relocate across a state line to take advantage of more favorable wage (and tax laws). Additionally, substantially raising the cost for Missouri labor, relative to labor sources in other states and other countries, is likely to force many manufacturing jobs in Missouri to disappear entirely. Automation is also a significant risk. The substitution of labor is becoming increasingly easy due to technology advancements and the "sharing" economy, where fewer individuals are "employees" covered by the minimum wage. Finally, a labor "price shock" may result in significant decreases in the demand for goods and services. People make behavioral changes to avoid higher costs, including eating out less often and generally decreasing consumption (or shifting their activities to consumption involving comparatively low amounts of labor) wherever possible.

[1] Sherk, James, "How $15-per-Hour Minimum Starting Wages Would Affect Each State," The Heritage Foundation, http://report.heritage.org/ib4601.

[2] "The coefficients on these estimates imply an elasticity of –0.677 for a study published in 2012 (the most recent year in their data) of long-run unconditional labor demand for low-skilled labor in the U.S., estimated using industry-level administrative panel data and a structural form model." "Estimates that do not account for publication bias tend to slow a long-run elasticity closer to –1.0. See, for example, George Borjas, Labor Economics, 6th ed. (Columbus, OH: McGraw-Hill, 2013), Chapter 4: 'The evidence also suggests that the estimates of the long-run labor demand elasticity cluster around –1, so the long-run labor demand curve is indeed more elastic than the short-run curve.' " Sherk, available at http://report.heritage.org/ib4601.

Graves Garrett LLC

d) Unemployment Benefit Costs

We derived an average unemployment payout by calculating the expected weekly unemployment benefit amount. Based on current data, the expected unemployment weekly benefit amount of a worker making $7.65 an hour, on a 40 hour workweek, is $159.12 per week, for 20 weeks.[3] The expected unemployment weekly benefit amount of a worker making $10.99 an hour is $228.59 per week. The expected unemployment weekly benefit amount of a worker making $11.99 an hour is $249.39 per week. The expected unemployment weekly benefit amount of a worker making $12.99 an hour is $270.19 per week. We assume that workers will seek unemployment insurance for the full twenty weeks authorized under Missouri law, because unemployment attributable to an increase in the minimum wage is structural. In this case, structural unemployment occurs because workers' job skills do not meet the established "price floor" of labor, rendering the worker's skills unmarketable. Assuming an even distribution of workers affected, the average unemployment benefit cost to the state for a worker is calculated as follows:

- For Initiative Petitions 2018-213 through 2018-216, [($159.12+$228.59)/2]*20 = $3,877.10
- For Initiative Petitions 2018-196, 2018-197, 2018-200, 2018-202, and 2018-204 through 209, [($159.12+$249.39)/2]*20 = $4,085.10
- For Initiative Petitions 2018-198, 2018-199, 2018-201, 2018-203, 2018-210 through 2018-212, [($159.12+$270.19)/2]*20 = $4,293.10

Consistent with Dr. Macpherson's 2012 report, it would be reasonable for the Auditor to assume that 35% of unemployed workers will receive unemployment benefits. Combining these numbers leads to the following estimates:

Year of final prescribed wage increase	Estimate of Missouri Workers Unemployed by Initiative	Estimated Unemployment Amount Per Worker	Estimated Total Unemployment Premiums Paid	Average Annual Unemployment Premiums Paid by State
2021 ($11)	38,512	3,877.10	$52,260,206.32	$17,420,068.77
2022 ($11)	33,150	3,877.10	$44,984,052.75	$11,246,013.19
2022 ($12)	64,236	4,085.10	$91,843,669.26	$22,960,917.32
2023 ($12)	56,895	4,085.10	$81,347,617.58	$20,336,904.39

[3] https://labor.mo.gov/DES/Claims/calculator. A 2015 law decreased the unemployment benefit period from 20 weeks to 13 weeks, but the Supreme Court of Missouri struck down the law in July 2016.

2023 ($13)	95,281	4,293.10	$143,167,801.39	$28,633,560.28
2024 ($12)	50,220	4,085.10	$71,803,802.70	$11,967,300.45
2024 ($13)	85,861	4,293.10	$129,013,450.69	$21,502,241.78
2025 ($13)	77,256	4,293.10	$116,083,706.76	$16,583,386.68
2026 ($13)	69,349	4,293.10	$104,202,767.17	$13,025,345.90

3. Impact on State Income Tax Revenue

The 2012 analysis prepared by Dr. Macpherson may also be used as a reference in calculating the effect of the initiative petitions on state income tax revenue. Here, again, it is reasonable to assume that our "affected workers" are evenly distributed, though precise CPS–ORG data would also provide a reliable estimate. Here, the increased income tax revenue is the additional income tax paid by workers whose wages increase. There is a loss of revenue, however, in the form of decreased income tax paid by workers whose wages decrease and businesses who absorb the increased cost of labor, rather than passing it along to customers.

For the purposes of these estimates, we assume that workers work 40 hours a week and 52 weeks per year:

Year of final prescribed wage increase	Estimate of Workers Affected	Estimate of Missouri Workers Unemployed by IP	Estimate of Missouri Workers with Increased Wages	Annual Increase in Wages Paid to Workers who get Wage Increase in Final Year	Annual Decrease in Wages Paid to Workers now Unemployed
2021 ($11)	174,897	38,512	136,385	$382,969,080.00	$108,141,696.00

2022 ($11)	162,262	33,150	129,112	$342,405,024.00	$87,913,800.00
2022 ($12)	225,866	64,236	161,630	$596,737,960.00	$237,159,312.00
2023 ($12)	212,532	56,895	155,637	$550,332,432.00	$201,180,720.00
2023 ($13)	275,061	95,281	179,780	$822,673,280.00	$436,005,856.00
2024 ($12)	199,683	50,220	149,463	$505,184,940.00	$169,743,600.00
2024 ($13)	261,136	85,861	175,275	$774,715,500.00	$379,505,620.00
2025 ($13)	247,695	77,256	170,439	$726,750,021.03	$329,419,584.00
2026 ($13)	234,683	69,349	165,334	$679,192,072.00	$284,885,692.00

These net wage increases will lead to corresponding increases in state income tax collections. Traditionally, it has been assumed that about 50% of affected workers will pay 6% income tax, while the other 50% of workers pay no state income tax. This assumption may be less accurate at the higher wage increases contemplated by the Initiative Petitions. Accordingly, figures are also displayed assuming that about 75% of affected workers will pay 6% income tax, while the other 25% of workers pay no state income tax.

Annual Net Increase in Wages Paid To Workers	Annual Income Tax Increase from Wage Increase (50% pay tax)	Annual Income Tax Increase from Wage Increase (75% pay tax)
$274,827,384.00	$8,244,821.52	$12,367,232.28
$254,491,224.00	$7,634,736.72	$11,452,105.08
$359,578,648.00	$10,787,359.44	$16,181,039.16
$349,151,712.00	$10,474,551.36	$15,711,827.04
$386,667,424.00	$11,600,022.72	$17,400,034.08
$335,441,340.00	$10,063,240.20	$15,094,860.30
$395,209,880.00	$11,856,296.40	$17,784,444.60
$397,330,437.03	$11,919,913.11	$17,879,869.67
$394,306,380.00	$11,829,191.40	$17,743,787.10

Graves Garrett LLC

Based on these figures, Missouri businesses must also decide whether to pass along any increase in wage costs (wages and mandatory payments).[4]

Year of final prescribed wage increase	Annual Cost to Business from Increased Wage	Annual Decreased Corporate Income Tax if cost is fully absorbed	Annual Decreased Corporate Income Tax if cost is 50% absorbed
2021 ($11)	$412,266,214.62	$25,766,638.41	$12,883,319.21
2022 ($11)	$368,599,008.34	$23,037,438.02	$11,518,719.01
2022 ($12)	$642,388,413.94	$40,149,275.87	$20,074,637.94
2023 ($12)	$592,432,863.05	$37,027,053.94	$18,513,526.97
2023 ($13)	$885,607,785.92	$55,350,486.62	$27,675,243.31
2024 ($12)	$543,831,587.91	$33,989,474.24	$16,994,737.12
2024 ($13)	$833,981,235.80	$52,123,827.23	$26,061,913.62
2025 ($13)	$782,346,397.64	$48,896,649.85	$24,448,324.93
2026 ($13)	$731,150,265.50	$45,696,891.59	$22,848,445.80

Assuming businesses absorb half of the cost of increased wages, and 75 percent of affected workers pay the new, higher taxes, the effect on state income tax collections is estimated to be:

Year of final prescribed wage increase	Annual Net Income Tax Revenue Loss
2021 ($11)	($516,086.93)
2022 ($11)	($66,613.93)
2022 ($12)	($3,893,598.78)
2023 ($12)	($2,801,699.93)
2023 ($13)	($10,275,209.23)
2024 ($12)	($1,899,876.82)
2024 ($13)	($8,277,469.02)
2025 ($13)	($6,568,455.26)
2026 ($13)	($5,104,658.70)

[4] A healthcare benefit cost estimate is not available based on the time limitations imposed by this fiscal note.

Graves Garrett LLC

4. Sales tax revenue gain or loss

Projecting any increase in sales tax revenue resulting from an increased minimum wage would require the auditor's office to conclude, based on data separate and apart from the sheer conjecture typically offered by political activist groups: (1) the net effect on consumer disposable income and (2) the percentage of a consumer's disposable income that is spent on goods subject to the sales tax, taking into consideration that the scope of Missouri's sales tax has been truncated by a voter-approved constitutional amendment from November 2016.

Typically, the Auditor's office multiplies the total increase in worker earnings (which should be adjusted for employment reductions) and multiplies the result by 25 percent, then multiplying that figure by the Missouri the population weighted combined average state and local sales tax in Missouri, 7.81%.[5] Based on this estimate, the population-weighted combined average local sales tax is 3.585%.

However, it would be deceptive to fail to account for sales tax losses from workers whose wages are eliminated or sales tax losses from reduced business profits (attributable to the higher wages paid), which will lower spending by business owners. The first figure is calculable by determining the total annual wages (adjusted for employment deductions) for all workers who lose jobs due to a minimum wage hike, multiplied by 25 percent. The second number is calculable by multiplying the total increase in worker earnings (multiplied by 1.0765 to account for Social Security and Medicare taxes) by approximately 15 percent.[6]

Year of final prescribed wage increase	Annual Net Increase in Wages Paid To Workers	New Wages Spent on Sales Tax Items	Annual Cost to Business from Increased Wage	Annual Business Income No Longer Included in Sales Tax Base (50% passed-through)
2021 ($11)	$274,827,384	$68,706,846	$412,266,214.62	($61,839,932)
2022 ($11)	$254,491,224	$63,622,806	$368,599,008.34	($55,289,851)
2022 ($12)	$359,578,648	$89,894,662	$642,388,413.94	($96,358,262)
2023 ($12)	$349,151,712	$87,287,928	$592,432,863.05	($88,864,929)

[5] http://taxfoundation.org/sites/taxfoundation.org/files/docs/LOST--2015.png.
[6] This estimate would also need to be adjusted to reflect certain employers' mandate under the Affordable Care Act to provide healthcare coverage and pay 60 percent of such coverage.

2023 ($13)	$386,667,424	$96,666,856	$885,607,785.92	($132,841,168)
2024 ($12)	$335,441,340	$83,860,335	$543,831,587.91	($81,574,738)
2024 ($13)	$395,209,880	$98,802,470	$833,981,235.75	($125,097,185)
2025 ($13)	$397,330,437	$99,332,609	$782,346,397.64	($117,351,960)
2026 ($13)	$394,306,380	$98,576,595	$731,150,265.51	($109,672,540)

Accordingly, the annual estimations of the effects on state and local revenue, and total state economic impact are as follows:

Year of final prescribed wage increase	Annual Net Income Tax Revenue Loss	Annual Net Effect on State Sales Tax	Total Annual Effect on State Tax Revenue	Total Net Loss to State Government from Taxes and Unemployment Insurance	Annual Net Effect on Local Sales Tax
2021 ($11)	($516,086.93)	$290,127.11	($225,959.82)	($17,646,028.59)	$246,178.86
2022 ($11)	($66,613.93)	$352,067.34	$285,453.41	($10,960,559.78)	$298,736.43
2022 ($12)	($3,893,598.78)	($273,087.10)	($4,166,685.88)	($27,127,603.19)	($231,720.06)
2023 ($12)	($2,801,699.93)	($66,628.31)	($2,868,328.24)	($23,205,232.64)	($56,535.50)
2023 ($13)	($10,275,209.23)	($1,528,364.68)	($11,803,573.91)	($40,437,134.18)	($1,296,849.08)
2024 ($12)	($1,899,876.82)	$96,566.47	($1,803,310.36)	($13,770,610.81)	$81,938.65
2024 ($13)	($8,277,469.02)	($1,110,951.72)	($9,388,420.74)	($30,890,662.52)	($942,665.55)
2025 ($13)	($6,136,139.31)	($761,317.55)	($6,897,456.87)	($23,480,843.55)	($645,993.71)
2026 ($13)	($5,104,658.70)	($468,803.67)	($5,573,462.37)	($18,598,808.26)	($397,789.62)

5. Damage to small business

Additionally, any proponent or opponent fiscal note submission is required, pursuant to Missouri law, to state the impact of the initiative on small businesses. According to analysis by the Employment Policies Institute, 40 percent of the minimum wage workforce is employed at businesses with fewer than 50 employees. [7] The impact on extra costs to small business may be more significant than even this 40% figure suggests. Small businesses are more easily shut down by input price increases than large businesses, which have greater access to capital to weather the

[7] https://www.epionline.org/oped/who-really-employs-minimum-wage-workers/

storm. Clearly, small businesses that do not shut down due to increases in the minimum wage will pay higher costs, estimated at about 40% of business' total increased costs, described above.

Conclusion

In conclusion, the State Auditor should attempt to quantify the increased cost to be borne by state and local government entities through increased contracting costs as a result of an increase to the minimum wage. This direct cost is outlined in Section 1.

Indirect costs are outlined in Sections 2 through 5, and show a net loss. Although such second-order effects more difficult to predict, a net loss is easily the most likely outcome. Significantly, this result is only obtainable if the Auditor reviews both the "credit" and "debit" sides of the transfer of wealth from businesses to workers. The Auditor should refrain from taking the proponents' likely invitation to consider and present only the "credit," side, and should attempt to provide a complete picture of all effects of a minimum wage increase, including the loss of revenue to state and local governments from individuals who lose employment. Only conveying (or quantifying) the potential for gain, without fairly conveying the likelihood of net loss, would be deceptive and unfair.

The State Auditor's previous 2018 fiscal notes are a good model. Each of the fiscal notes for the Initiative Petitions should follow the already-established format and state that:

> "[O]perating costs could increase by an unknown annual amount that could be significant. State and local government tax revenue could change by an unknown annual amount ranging from a $## million decrease to a $## million increase depending on business decisions."

Should you desire further detail or have any questions about this fiscal impact statement, please do not hesitate to contact me.

Sincerely,

Edward D. Greim

ABOUT THE MISSOURI RESTAURANT ASSOCIATION

With origins dating back to 1916, the Missouri Restaurant Association (MRA) is a statewide trade association representing over 1,500 member establishments. The association's membership is diverse, and includes full service, fast casual, and quick service restaurants, cafeterias, hotels, schools, institutions, contract feeders, and ancillary foodservice providers such as theme parks. The association has been successful in securing support from virtually every segment of the foodservice and hospitality industry.

MRA includes seven chapters as extensions of the parent organization, each with its own Officers, Board of Directors, and limited budget. The association is governed by a Board of Directors comprised of five Officers, 33 Directors, and each President of the seven affiliated chapters.

MRA is dedicated to serving the needs of the foodservice and hospitality industry, enhancing and improving its growth and development, assisting and educating its members in operating more effectively, improving the political and social environment in which the industry conducts business, for the benefit of its members, patrons, employees, and the well-being of the community.

David A. Macpherson is the E.M. Stevens Professor of Economics at Trinity University. He received undergraduate and doctoral degrees in economics from Pennsylvania State University.

Dr. Macpherson has published over 60 articles in leading economics and real estate journals including Review of Economics and Statistics, Industrial and Labor Relations Review, Journal of Labor Economics, Journal of Human Resources, and Journal of Real Estate Economics and Finance. His research has been funded by a variety of entities including the National Science Foundation, Florida Legislature, and the National Association of Realtors. He is co-author of the undergraduate labor economics text, Contemporary Labor Economics, as well as the principles of economics text, Economics: Private and Public Choice. He is included in Who's Who in Economics, Fourth Edition, which includes the 1,200 most frequently cited economists.

THE IMPACT OF A $10.10 MINIMUM WAGE ON JOBS AND TAXPAYER COSTS IN MISSOURI

June 2014

Economic Analysis by **Dr. David Macpherson**

Technical Appendix 7

EXECUTIVE SUMMARY

Missouri's minimum wage of $7.50 is linked to rise in most years with the inflation rate. But some state legislators and labor unions would like to raise that figure even higher. For instance, a recent labor union-organized bus tour in the state promoted a $10.10 minimum wage in St. Louis.

Proponents have enthusiastically pointed to the benefits of the $10.10 policy. But there's been far less discussion of the costs involved with a $10.10-an-hour minimum wage—both the cost on employment, and the cost to taxpayers.

In this study, labor economist David Macpherson of Trinity University uses Census Bureau data to estimate the impact on Missouri's labor market and budget from raising the minimum wage to $10.10 an hour. He also provides separate results for the St. Louis metropolitan area.

Dr. Macpherson's employment estimates follow the methodology used by the nonpartisan Congressional Budget Office in its report earlier this year estimating the impact of a $10.10 minimum wage nationwide, which in turn relied on 60 different empirical studies to formulate its estimates.

Statewide, he finds that over 15,000 jobs would be lost at the $10.10 wage level—with 9,300 of those jobs being held by women. In the St. Louis metropolitan area, approximately 4,800 jobs would be lost from a $10.10 minimum wage.

The cost to taxpayers would be significant: There are approximately 40,000 state and local employees whose wages would be affected by the $10.10 increase in Missouri, for a combined cost to taxpayers of $87 million annually.

Raising wages is an admirable goal, but the evidence suggests that accomplishing this goal with a blunt wage mandate could do more harm than good.

RESULTS

The minimum wage is one of the most hotly-debated topics in the political world. Some legislators claim that a higher base wage will stimulate the economy; others claim that it will reduce jobs when affected employers can't offset the higher costs through higher prices.

Economists, who have studied the issue since the late 1940s, tend to take a skeptical view of minimum wage increases. Since the early 1990s, for instance, roughly 85 percent of the most credible research on the minimum wage points to job loss for less-skilled groups. The nonpartisan Congressional Budget Office (CBO), in an evaluation of President Obama's proposed $10.10 minimum wage increase, reviewed 60 different studies and concluded that the policy would eliminate 500,000 jobs if enacted.

The estimates that follow, of the employment impact of a higher minimum wage on Missouri's labor market, were performed by Dr. David Macpherson of Trinity University. Dr. Macpherson followed closely the methodology used by the CBO in its 2014 report. Dr. Macpherson also estimates the taxpayer costs of a higher minimum wage, as many state and local public employees will see their earnings increase when the minimum wage rises.

Dr. Macpherson's methodology is presented in detail in a technical appendix.

Estimated Employment Effects of a $10.10 Minimum Wage in Missouri

Statewide, Dr. Macpherson finds that increasing the minimum wage to $10.10 would eliminate over 15,000 jobs—approximately 60 percent of which are jobs held by women. The bulk of the job losses would be concentrated among individuals with a high school degree or less, and among people who work in the retail or leisure & hospitality industries.

(Note: Totals have slight discrepancies due to rounding.)

City-Specific Minimum Wage Employment Impacts

The city of St. Louis has been the subject of a number of protests calling for a higher minimum wage. Dr. Macpherson analyzed the employment impact of a $10.10 minimum wage in the St. Louis metropolitan area, providing breakouts by gender and education where the data permits. He estimates that the wage hike would eliminate approximately 5,000 jobs—just over half of which would be jobs held by women.

RESULTS CONTINUED

Missouri Taxpayer Costs of a $10.10 Minimum Wage

Dr. Macpherson estimates that approximately forty thousand state & local public employees would be affected by a minimum wage increase to $10.10 an hour. These additional wage costs translate to new costs for state and local taxpayers. Following the methodology described in detail in the technical appendix, Dr. Macpherson estimates both the straight wage cost of a $10.10 minimum wage, as well as the total compensation cost with Social Security, Medicare, workers compensation, and unemployment insurance included. Statewide, taxpayers would shoulder an additional $87 million in costs if the base wage was increased to $10.10 an hour and public employees were covered by the new wage.

Missouri Taxpayer Costs of a $10.10 Minimum Wage	
# of State & Local Workers	304,588
# Affected By $10.10 MW	40,103
Annual Wage Cost	$79,629,374
Annual Compensation Cost	$87,004,355

Note: Annual compensation costs include the cost of worker's compensation, FICA, and unemployment insurance benefits.

TECHNICAL APPENDIX

Estimating Employment Loss and the Cost to State and Local Government of an Increase in the Minimum Wage

Dr. David Macpherson
E.M. Stevens Professor of Economics
Trinity University

This paper describes how we estimate the employment loss and the cost to state and local governments of a proposed increase in the minimum wage effective on January 1, 2015.

Data and Sample

First, we use data from the Current Population Survey (CPS) Outgoing Rotation Groups (ORG) from January 2011 through December 2013. For each worker in the sample, we calculate their wage rate. We also adjust the wage rate to reflect a forecast of wages in 2015. This is done in two steps. First, based on legislation enacted as of April 2014, we estimate the minimum wage that would be in effect in January 2015 for each state and city that we consider. If a state or city has an indexed minimum wage, we increase the January 2014 state or city minimum wage by the Congressional Budget Office (CBO) inflation forecast for 2014 of 1.7%.

Since we use data from 2011 through 2013, we also follow the CBO approach for forecasting what the wage distribution would be in 2015. This is done in two steps. First, we adjust wages observed prior to 2013 to reflect 2013 minimum wage legislation. For example, if the minimum wage in a state was $7.25 in 2011 and grew to $8.00 by 2013, anyone who earned between $7.25 and $8.00 in 2011 would have their wage increased to $8.00. After wages are adjusted to 2013 levels, we assume that all wages grow by 2.9% in 2014. Using the resulting 2015 distribution of wages, we adjust for minimum wage legislation that would increase the minimum between 2013 and 2015. Anyone earning a wage between the 2013 and 2015 minimum wage is assigned a wage matching the 2015 minimum wage.

After generating the forecast 2015 distribution of wages reflecting wage growth and existing minimum wage legislation, we identify workers who would be affected by additional changes to the 2015 minimum wage as those with wages between the predicted minimum wage legislated for 2015 (or up to $.25 below it) and the proposed minimum.

To estimate the number of affected workers, we take two steps. First, for each state, we estimate the number of affected workers for 2013. Second, we adjust the weights in the 2011 and 2012 data so that the state-specific number of affected workers implied by the 2011 and 2012 data matches that for 2013. This adjustment is designed to correct for the changing economic climate as the economy recovers from the great recession and to generate estimates that are as close as possible to the most recent data (2013). After we adjust the 2011 and 2012 weights, we estimate the number of affected workers by summing their earnings weights and dividing the total by 36 (the number of months of data).

[1] Also, following CBO, anyone earning up to $.25 less than the 2011 minimum wage would have their wage increased by the amount that the minimum wage increased (i.e. a $7.00 wage would be increased to $7.75 in this example). This approach is used to adjust for the fact that many workers round their answers when asked about their wage.

TECHINCAL APPENDIX CONTINUED

Employment Loss

To estimate employment loss, for each affected worker we compute:

L = e *(Proposed Min Wage /Min Wage 2015 – 1)

where e is an assumed elasticity of employment with respect to changes in the minimum wage, Min Wage 2015 is the minimum wage currently legislated for 2015, and Proposed Min Wage is the minimum wage that is being proposed for 2015. Thus, for example, if a worker is projected to earn the federal minimum of $7.25 in 2015, the expected reduction in employment resulting from a $10.10 minimum wage in 2015 if e=.45 is .45*(10.10/7.25 – 1) = .18. That is, for every 100 workers currently earning the federal minimum, the expectation is that 18 would lose a job if the minimum wage elasticity is .45.

To estimate the aggregate employment loss in the economy, we use earnings weights to sum L across workers. We also follow the Congressional Budget Office (2014) and use an elasticity of 0.15 for non-teenagers and 0.45 for teenagers.

Cost to State and Local Government

We use the same data to estimate the cost to state and local government of a proposed minimum wage hike. We apply the same definition of affected workers described above and estimate the number of state and local government workers affected by a minimum wage hike. We do not, however, assume that there is any job loss for state and local workers as we do not have an appropriate elasticity estimate specific to state and local workers. To the extent that state or local governments reduce hours or employment in response tothe minimum wage hike, our estimate of the cost of the hike would be overstated.

To estimate the increase in annual payroll cost resulting from an increase in the minimum wage, we estimate the increase in annual cost for each worker as:

(Proposed Min Wage-Min Wage 2015)*weekly hours*52

We then multiply the increase in annual cost by the earnings weight for each worker and sum across workers. Since an increase in wages also requires increased employer contributions for Social Security, Medicare, workers' compensation and unemployment insurance, we apply an estimate of the payroll tax rate for these mandatory programs to calculate the additional cost for these programs.

For each state and city considered, we provide tables summarizing the number of affected workers, employment loss, and the distribution of employment loss by sex, education, race, age and industry. Given that we use three years of data, a rule of thumb for minimum sample size required to achieve a reasonably accurate estimate of the employment loss is to require at least 30,000 people be in the relevant category. For example, if there are fewer than 30,000 people projected to be in a particular industry category, the Bureau of Labor Statistics would not report the estimate due to a lack of reliability based on the variance of the estimate relative to its mean.

In addition to the estimate of employment loss, for each state or city considered, we estimate the number of state and local workers that would be affected by the minimum wage hike and the total annual cost to government in terms of wages and total compensation. As with the employment estimates, we advise caution in interpreting estimates that are based on fewer than 30,000 affected workers.

[3] Congressional Budget Office, "The Effects of a Minimum-Wage Increase on Employment and Family Income," February 2014.

[4] For workers paid by the hour the reported hourly wage was used. For workers who are not paid by the hour, we calculate the hourly wage by dividing usual weekly earnings by usual weekly hours. Overtime pay was calculated as time and one-half for hours above 40 hours for hourly workers.

[5] The assumed payroll tax for Medicare and Social Security is 7.65 percent. To estimate the payroll tax for workers' compensation and unemployment insurance, we use unpublished data from the 2010 Employer Cost of Employee Compensation database for state and local workers in the relevant region in 2010.

FISCAL ANALYSIS
OF
PROPOSED STATUTORY INITIATIVE PETITIONS 2012-084 AND 2012-085

Prepared for

Victor Allred versus Robin Carnahan and Thomas Schweich
Circuit Court of Cole County, Missouri

FISCAL ANALYSIS
OF
PROPOSED STATUTORY INITIATIVE PETITIONS 2012-084 AND 2012-085

I. Introduction

This report was undertaken at the request of counsel representing plaintiffs in the case of Victor Allred versus Robin Carnahan and Thomas Schweich. As part of the basis of the lawsuit, the plaintiffs allege that the fiscal note summaries for proposed statutory initiative petitions 2012-084 and 2012-085 are insufficient and unfair. I was asked by counsel to evaluate the fiscal impact of proposed statutory initiative petitions 2012-084 and 2012-085.

The results of my analysis indicate:

(1) labor costs to state and local government entities, based on state auditor fiscal notes, will rise by more than $1,352,182. A more inclusive estimate indicates that state and local government labor costs will increase by $16,003,712;

(2) unemployment benefit costs will rise by $4,397,510 during the first year of the minimum wage increase;

(3) individual income tax revenue will rise by at most $4,078,088;

(4) the loss in corporate income tax revenue could be as high as $9,243,105;

(5) state and local sales tax revenue will rise by at most $2,919,327;

(6) during the first year: state and local governments will incur increased costs of $20,401,222; the change in state and local government revenue will

range from -$2,245,690 to +$6,997,415; and the net state and local government fiscal impact will range from -$22,646,912 to -$13,403,807.

The report is organized as follows. My qualifications to prepare this report are contained in Section II. Section III describes the data and records I relied upon for this report. Section IV reviews the estimated fiscal impact of proposed statutory initiative petitions 2012-084 and 2012-085. A summary and my conclusions are provided in Section VI.

II. Qualifications

I am currently the E.M. Stevens Professor of Economics at Trinity University in San Antonio, Texas. Previously, I was employed by Florida State University as Director of the Pepper Institute on Aging and Public Policy and the Rod and Hope Brim Eminent Scholar in Economics. I have taught both undergraduate and graduate Econometrics (statistical analysis of economic data), and Labor Economics. I have published over 50 articles in peer-reviewed professional journals.

I am currently serving on the editorial board of the *Journal of Forensic Economics*, which is a peer-reviewed journal. I have also served as a reviewer or 'referee' for 24 peer-reviewed journals, including the *Journal of Human Resources, Journal of Labor Economics, Quarterly Journal of Economics,* and the *Review of Economics and Statistics*. Based upon these experiences, I am very familiar with the scholarly and professional research process and the concept of peer review.

I have prepared numerous analyses and reports that use statistical methods as applied to specific questions. I have been responsible for developing the techniques and approaches required for these analyses. I routinely use computers and statistical software packages to assist me in my analytical work. I have been qualified as an expert witness on statistical analysis of employment discrimination and economic damages in state courts in Florida and Georgia and Federal Courts, and I have given expert testimony. I have prepared analyses and offered testimony on behalf of both plaintiffs and defendants.

Details of my qualifications are reflected in my current resume and legal cases, attached as Appendix A to the report.

III. Data and Records

I reviewed the following materials in preparing this report.

- Plaintiff's Complaint
- Material cited in footnotes below.

IV. Fiscal Impact

A. Overview

The proposed statutory initiative petitions 2012-084 and 2012-085 contain many elements in common. Both initiatives would increase the Missouri minimum wage to $8.25 per hour, alter the exemption for retail and service firms, raise the cash wage of tipped workers from 50% to 60% of the minimum wage, and increase the statute of limitation from two to three year for underpayment claims.

The initiatives differ in their linkage to the federal minimum wage. Initiative petition 2012-084 requires that the state minimum wage be automatically increased to the

federal minimum wage if it is higher than the state minimum wage. Initiative petition 2012-085 does not have such a linkage. It only requires that workers be paid the higher of the state minimum wage or the federal minimum wage. The linkage to the federal minimum wage will cause the state minimum wage to be higher under initiative petition 2012-084 over time. This is because the state minimum wage, in contrast to the federal minimum wage, is adjusted for inflation as measured by the Consumer Price Index.

An increase in the minimum wage in Missouri will affect state and local government entities in two ways. First, it will directly increase the cost of labor to state and local government entities. This will occur due to the increase in wages of state and local government workers earning between the existing minimum wage of $7.25 and the new minimum wage of $8.25.[1] In addition, workers laid off due to the minimum wage increase can collect unemployment benefits. The state government will bear the cost of unemployment benefits of these workers for the first 20 weeks. Second, state and local government may gain increased revenue through higher income tax and sales taxes paid by workers affected by the minimum wage who remain employed. However, state and local government will suffer reduced tax revenue to the extent the higher wage cost lowers profits of businesses.

The following sections estimate the cost and revenue effects to state and local government entities of the proposed minimum wage increase.

[1] Information about the minimum wage in Missouri is available at http://www.labor.mo.gov/DLS/minimumwage/.

B. Direct Labor Cost Impact on State and Local Government Budgets

There are two possible ways to measure the direct labor cost on state and local government budgets. First, one can use the information included in the fiscal notes prepared by the State Auditor regarding the proposed initiatives. It is important to note that the fiscal notes provide an incomplete and thus too low estimate of the direct labor cost. The fiscal notes indicate that the Office of Administration's (OA) Division of Personnel reported that as of September 2011 there were 834 state workers who would be affected by an increase of the minimum wage to $8.25 and the "approximate annual cost" would be more than $540,000.

This OA estimate excludes seasonal workers such as State Fair employees, State Parks Employees, and tax season staff. The Division of Revenue noted its labor cost would rise by $40,000. The Division of Natural Resources stated they have over 500 workers who would be affected by the increase, but did not provide an estimate of the cost. The State Fair hired 745 workers that would be affected, but no cost estimate was provided.

Thus, the cost to state government, based on the fiscal notes, would be more than $580,000.

The fiscal notes also provide an incomplete and thus too low measure of the cost to local government and public educational institutions. Many cities and educational institutions did not respond to Office of Auditor's survey or provide an estimate of the cost of the higher minimum wage. The City of Columbia, City of Jefferson, City of

Joseph, Linn State Technical College, and Metropolitan Community College did provide such an estimate. The total cost to these five institutions is $772,182.

Based on the fiscal notes, the cost to state and local government entities of the increase in the minimum wage to $8.25 will be more than $1,352,182.

Second, data from the U.S. Census Bureau's Current Population Survey (CPS) can also be used to calculate the cost of the increased labor cost to state and local government entities in Missouri. Using the data from January 2010 to December 2011 Outgoing Rotation Group (ORG) CPS, I calculated that 17,089 state and local government workers would be affected by the minimum wage increase. I defined affected workers as those individuals earning between $7.00 and $8.24 per hour. Though the minimum wage was $7.25 per hour during this period, I also included those workers reporting earnings of $7.00 to $7.24 since some individuals may round their wage rate. I calculated the annual wage cost for each state and local government worker (i) in the ORG CPS as:

$$Annual\ Wage\ Cost_i = (\$8.25 - current\ wage_i) * weekly\ hours_i * 52.$$[2]

The average annual wage cost increase was $870. I summed the cost over each worker (i) to obtain the total wage cost to state and local government entities in Missouri of $14,866,430.

The increased wage cost is not the only labor cost to state and local government entities of the minimum wage increase. Employers are required to pay 7.65% of their wage costs in Social Security and Medicare taxes. Thus, the total labor cost of the minimum wage increase will be 1.0765 times $14,866,430 or $16,003,712.

---

[2] I assume that persons reporting an hourly wage rate between $7.00 and $7.24 are actually earning $7.25 per hour.

C. Unemployment Benefit Impact

The higher minimum wage will cause firms to reduce their level of employment.[3] As a result, the number of unemployed workers will increase. Thus, another important fiscal cost of the minimum wage increase is the cost of the unemployment insurance benefits for the workers laid off as a result of the minimum wage increase.

To calculate the cost to the unemployment benefits program, I first calculated the number of workers laid off. To do so, I calculated a probability of job loss for each affected Missouri worker (i) in the January 2010 to December 2011 ORG CPS:

$$Probability\ Job\ Loss_{\ i} = \frac{(\$8.25 - Current\ Wage_i)}{Current\ Wage_i} * elasticity_i.$$

I used the preferred employment elasticity (i.e., sensitivity of employment to wage changes) contained in Sabia and Burkhauser (2010), which was -0.6 for individuals aged 16 to 29 without a high school degree and -0.2 for all other individuals. The sole exception was for state and local government workers, where I assumed an elasticity of zero.[4] The sum across all affected workers yielded an estimated job loss of 5,745 jobs.

The next step was to calculate the weekly benefit for the average unemployed worker. Using the benefits calculator on the Missouri unemployment benefits web site and the wage income of average private-sector affected worker ($10,937), yields an average weekly benefit of $109.36[5]. The state of Missouri pays the first 20 weeks of benefits.[6] Thus, each eligible unemployed worker could receive a total of $2,187.20 in

---

[3] For a survey of research regarding the effect of the minimum wage on employment, see David Neumark and William L. Wascher, *Minimum Wages* (Cambridge, MA: MIT Press, 2008).
[4] Joseph J. Sabia and Richard V. Burkhauser, "Minimum Wages and Poverty: Will a $9.50 Federal Minimum Wage Really Help the Working Poor?" *Southern Economic Journal* (January 2010): 592-623.
[5] http://www.labor.mo.gov/DES/Claims/calculator.asp
[6] See http://www.labor.mo.gov/DES/Claims/

benefits paid for by the state of Missouri. These jobs are permanently eliminated and so it is appropriate to calculate the full amount of benefits for each worker.

Unemployment insurance, however, does not cover all unemployed workers. For example, it does not cover people who leave a job voluntarily, people looking for their first job, and re-entrants who previously left the labor force voluntarily. Furthermore, some individuals don't apply for benefits even though they are eligible. I assume that 35% of the unemployed workers will receive unemployment benefits based on analysis by Wenger (2001).[7]

The last step is to calculate the total cost to the Missouri unemployment benefits program. This done by multiplying the number of jobs lost (5,745) times the average benefit amount ($2,187.20) times the percent of unemployed individuals collecting benefits (35%). This calculation yields a figure of $4,397,510. This cost would be borne only during the first year of the minimum wage increase. The inflation adjustments in the minimum wage will also yield costs to the unemployment insurance program, but it is not possible to estimate the amount.

D. Impact on State Income Tax Revenue

The state of Missouri will gain increased revenue through higher income tax taxes paid by workers affected by the minimum wage who remain employed. However, it will

[7] Jeffery Wenger. "Divided We Fall: Deserving Workers Slip through America's Patchwork Unemployment Insurance System." *Economic Policy Institute*, 2001. Sabia and Burkhauser (2010) make the same assumption in their calculation of the amount of unemployment benefits generated by a minimum wage increase.

suffer reduced corporate income tax revenue to the extent the higher wage cost lowers profits of businesses.

To calculate the impact on individual income tax revenue, I again used data from January 2010 to December 2011 ORG CPS. I defined affected workers as those Missouri individuals earning between $7.00 and $8.24 per hour.[8] I used the following formula to estimate the change in income tax revenue:

$$\Delta Tax\ Revenue_i = (Tax_After_i - Tax_Before_i) - Prob_Job_Loss_i * Tax_Before_i,$$

where Tax_After_i is the income tax paid by worker i after the minimum wage increase. Tax_Before_i is the income tax paid by worker i after the minimum wage increase, and $Prob_Job_Loss_i$ is the probability of job loss for worker i. The first term shows the change in individual income tax revenue assuming no job loss and the second term shows the loss in tax revenue due to the employment loss caused by the minimum wage increase.

The income tax calculations were based on two assumptions.[9] First, the 50% percent of affected workers who were under the age 25 who were assumed to be dependents on another person's tax return. As a result, it was assumed that the affected workers' earnings were taxable at the maximum Missouri income tax rate of 6% both and after the minimum wage increase.[10] Second, all persons age 25 and older were assumed to be paying little or no income tax after exemptions and deductions. Thus, about 50% of the earnings increase will be taxed at a rate of 6%.

---

[8] I again assume that persons reporting an hourly wage rate between $7.00 and $7.24 are actually earning $7.25 per hour. The annual earnings level was calculated as the worker's wage rate times usual weekly hours worked times 52.

[9] The same assumptions are used in the State Auditor's fiscal notes for the initiatives.

[10] This assumption will overstate the revenue increase as 20% of affected workers under the age 25 are living by themselves and some of these individuals will not be a dependent on another person's tax return.

The tax calculations reveal an increase in income tax revenue increase to the state. Assuming no workers were laid off by the minimum wage increase, income tax revenue would rise by $6,043,534. However, the state will lose $1,965,446 in income tax revenue due to the lost earnings of private-sector workers no longer employed due to the minimum wage hike.[11] Thus, the net increase in individual income tax revenue is $4,078,088.

Businesses have three options to respond to the higher labor costs of a higher minimum wage. They can reduce their profits, raise prices, or lay off workers. Based on the 2010-2011 ORG CPS data, the minimum wage increase will raise private-sector labor costs by $192,620,900 if employment levels are not reduced. However, labor costs will be lowered by $55,240,790 due to the reduction in employment. Thus, labor costs will, on net, rise by $137,380,110. These increased labor costs may be either passed on to consumers through higher prices or reduced profits or more likely some combination of higher prices and reduced profits. Assuming that businesses absorbed all of the higher costs through reduced profits, the corporate income tax revenue would fall by the Missouri corporate income tax of 6.25% times the rise in labor costs of $137,380,110 * 1.0765 (to account for employer-paid Social Security and Medicare taxes) or $9,243,106.[12] Alternatively, if half of the higher labor costs were passed on to consumers, then corporate income tax revenue would fall by $4,621,553.

[11] The probability of job loss was calculated in the same manner as in the prior section.
[12] The corporate income tax for Missouri is available at: http://dor.mo.gov/business/corporate/

E. Impact on State and Local Sales Tax Revenue

To calculate the impact on state and local sales tax revenue the following approach was undertaken.[13] First, the total increase in worker earnings, adjusted for employment reductions, was calculated using the 2010-2011 ORG CPS. This figure was $152,246,540. Second, the increase in Missouri taxable sales was calculated as 25% of the earnings increase or $38,061,635. Third, the increase in sales tax revenue was calculated by multiplying the taxable sales change times the average state and local rate of 7.67% or $2,919,327.[14]

The higher minimum wage may decrease sales tax revenue to the extent that it reduces business profits, which will lower spending by business owners.

VI. Summary and Conclusions

I was asked by counsel to evaluate the fiscal impact of proposed statutory initiative petitions 2012-084 and 2012-085.

The results of my analysis indicate:

(1) labor costs to state and local government entities, based on state auditor fiscal notes, will rise by more than $1,352,182. A more inclusive estimate indicates that state and local government labor costs will increase by $16,003,712;

[13] The same general approach is used in the State Auditor's fiscal notes for the initiatives.
[14] The average rate comes from http://taxfoundation.org/news/show/27023.html

(2) unemployment benefit costs will rise by $4,397,510 during the first year of the minimum wage increase;

(3) individual income tax revenue will rise by at most $4,078,088;

(4) the loss in corporate income tax revenue could be as high as $9,243,105;

(5) state and local sales tax revenue will rise by at most $2,919,327;

(6) during the first year: state and local governments will incur increased costs of $20,401,222; the change in state and local government revenue will range from -$2,245,690 to +$6,997,415; and the net state and local government fiscal impact will range from -$22,646,912 to -$13,403,807.

FISCAL ANALYSIS
OF
PROPOSED STATUTORY INITIATIVE PETITIONS 2012-084 AND 2012-085

David A. Macpherson

David A. Macpherson, Ph.D.
March 26, 2012

Appendix A

Resume and Testimony of David A. Macpherson, Ph.D.

DAVID A. MACPHERSON

3/2012

Home Address

125 Park Drive
San Antonio, TX 78212
(210)-863-4808

Office Address

Department of Economics
Trinity University
One Trinity Place
San Antonio, TX 78212

Citizenship: U.S.

"Gender-Related Differences in Pension Coverage," with William Even, in *Women and Work: A Handbook*, Garland Publishing, New York, NY, 1996.

"The Pension Coverage of Young and Mature Workers", with William Even, in *Pension Coverage Issues for the '90s*, eds. Richard Hinz, John Turner, and Phyllis Fernandez, U.S. Government Printing Office, Washington, D.C, 1994.

Working Papers (Economics)

"Deferred Compensation vs. Efficiency Wages: An Experimental Test of Effort Provision and
Self-Selection," with Tim Salmon and Kislaya Prasad, under review, *Journal of Business and Economic Organization*

"What Do Unions Do to Pension Performance?" with William Even, September 2011, under revision

"Teacher Salaries, State Collective Bargaining Laws, and Union Coverage" March 2011, with Barry Hirsch and John Winters.

"The Effects of the 2007-2009 Federal Minimum Wage Increases on Teen Employment," with William Even, under revision, July 2010.

"Participant Direction in Defined Contribution Plans," April 2006, with William Even, under revision.

"Do Pensions Impede Phased Retirement?" September 2004, with William Even, under revision.

Working Papers (Real Estate and Insurance)

"An Empirical Analysis of Socio-Demographic Factors and the Mispricing of Homeowners Insurance in Florida," under review *Journal of Financial Services Research*, with Ronald Cheung, Charles Nyce, Kathleen McCullough, and Cassandra Cole.

"The Impact of No-Fault Legislation on Automobile Insurance Premiums," revised and resubmitted to *North American Actuarial Journal*, with Cassandra Cole, Kevin Eastman, Patrick Maroney, and Kathleen McCullough.

Funded Projects

Employment Policies Institute, 5/2010-7/2010, $16,500 (Trinity University portion), "Employment Effects of the 2007-2009 Federal Minimum Wage Increases," with William Even.

National Science Foundation, 9/2009-8/2012, $125,866 (Trinity University portion), "Incentives in the Workplace: An Experimental Examination of How Wage Differences Across Time and Among Peers Affect Productivity and Self-Selection," with Tim Salmon, Kislaya Prasad, and Hyejin Ku.

Florida Legislature, 10/2007-6/2009, $175,000, "Child Support Guidelines," with Stefan Norrbin and Thomas McCaleb.

Florida Legislature (through University of Florida), 12/2006-9/2007, $223,000, "Analysis of Save our Homes Amendment," with Dean Gatzlaff.

U.S. Administration on Aging (through University of South Florida), 5/2005-9/2007, $175,000, "Employment in the Long-Term Care Industry: The Importance of Recruitment and Retention," with William Even.

Florida Legislature, 2/2003-8/2004, $175,000, "Child Support Guidelines," with Stefan Norrbin and Thomas McCaleb.

Florida Department of Environmental Protection, 6/2002-2/2003, $94,157, "Affordability Index," with Stefan Norrbin and William Serow.

University of South Carolina, 4/2000-11/2000, $10,000, "Minority Homeownership in South Carolina," with Stacy Sirmans.

Florida Department of Business and Professional Regulation, 3/1999-6/1999, $21,739, "Forecasting Housing Demand in Florida," with Stacy Sirmans.

University of South Carolina, 4/1999-11/1999, $10,000, "Forecasting Housing Demand in South Carolina," with Stacy Sirmans.

Florida State University, 6/1999-8/1999, $7,500, "Support for Preparing ECO 2000 as a Web-Based Course."

TIAA-CREF, 8/1998-8/1999, $23,000, "Determinants of Savings in Supplemental Pension Plans: A Case Study of Pension Choices in Higher Education," with Melissa Hardy and Larry Hazelrigg.

Florida Department of Business and Professional Regulation, 4/1998-6/1998, $16,638, "Forecasting Seniors' Demand for Housing in Florida," with Stacy Sirmans.

Florida Department of Business and Professional Regulation, 12/1997-6/1998, $18,472, "Housing Price Appreciation in Orlando and Tampa," with Stacy Sirmans.

Florida State University, 6/1998-8/1998, $7,500, "Support for Preparing ECO 2000 as a Web-Assisted Course."

Florida Department of Business and Professional Regulation, 3/1997-6/1997, $17,898, "Minority Homeownership in Florida," with Stacy Sirmans.

U.S. Department of Labor, Pension Welfare and Benefit Administration, 12/1996-8/1997, $20,000, "The Impact of Rising 401(k) Pension Coverage on Retirement Income," with William Even.

U.S. Department of Labor, Pension Welfare and Benefit Administration, 3/1996-6/1997, $15,000, "The Determinants of 401(k) Participation and Contribution Levels," with William Even.

Florida Department of Business and Professional Regulation, 4/1996-6/1996, $22,702, "Forecasting the Number of New Florida Real Estate Licensees," with Stacy Sirmans.

U.S. Department of Labor, Pension Welfare and Benefit Administration, 3/1995-6/1996, $15,000, "Explaining the Decline in Pension Coverage of Less Educated Workers," with William Even.

Florida State University COFRS Grant, 6/1994-8/1994, $8,000, "The Relative Compensation and Quality of Public and Private Sector Workers."

W.E. Upjohn Institute for Employment Research, 3/1994-12/1995, $35,000, "Pensions and Productivity," with Stuart Dorsey and Christopher Cornwell.

Florida Division of Workers' Compensation, 1/94-12/1995, $100,000, "Worker's Compensation Recipency in Union and Nonunion Workplaces," part of a service contract titled "Research Partnership with the Division of Workers' Compensation," co-investigator (one of several).

University of Wisconsin Institute for Research on Poverty Small Grant Program, 7/1993-6/1994, $15,000, "Racial Composition, Wages, and Quality Sorting," with Barry Hirsch.

U.S. Department of Labor, Pension Welfare and Benefit Administration, 7/1993-6/1993, $10,000, "Trends in Individual and Family Pension Coverage," with William Even.

U.S. Department of Labor, Pension Welfare and Benefit Administration, 6/1992-5/1993, $10,000, "The Pension Coverage of Young and Mature Workers," with William Even.

U.S. Department of Labor, Pension Welfare and Benefit Administration and American Society of Pension Actuaries, 6/1991-5/1992, $10,000, "A Conference on Current Pension Policy Issues," with William Even.

Miami University Faculty Research Grant, 6/1991-8/1991, $4,000, "Projected Growth in Retiree Health Insurance Liabilities."

Ohio Board of Regents Research Challenge Grant, 1/1990-12/1990, $4,980, "Proposal to Enhance the Data Library of the Center of Pension and Retirement Research," with William Even and Samuel Williamson.

Miami University Faculty Research Grant, 6/1990-8/1990, $4,000, "The Role of Firm Size in Pension Coverage and Options."

Miami University Faculty Research Grant, 6/1989-8/1989, $4,000, "Declining Unionism and the Gender Wage Gap," with William Even.

Participation in National Meetings

Panel Discussant, American Real Estate and Urban Economics Association/ASSA meetings, January 2008.

Presented, "Employee Turnover in the Long-Term Care Industry," at Academy Health Annual Research Meetings, June 2007.

Presented, "Participant Direction in Defined Contribution Pension Plans," at International Atlantic Economic Society meetings, October 2006.

Presented, "The Risk and Return of Pension Investments in Employer Stock," at International Atlantic Economic Society meetings, October 2005.

Presented, "Replacing Earnings After Termination: Evidence from the Displaced Worker Survey," at the Allied Social Science Association/National Association of Forensic Economics, January 2002.

Presented, "Labor Market Transitions of Older Workers," at the Allied Social Science Association/Society of Government Economists meetings, January 1999.

Presented, "Why has the Loss in Pension Coverage Accelerated Among Less Educated Workers?" at the American Economic Association Meetings, 1995.

Presented, "Wages and Gender Composition: Why Do Women's Jobs Pay Less?" at the American Economic Association Meetings, 1994, with Barry Hirsch.

Presented, "Pensions, Labor Turnover, and Employer Size" at the American Economic Association Meetings, 1993, with William Even.

Presented, "Why Did Male Pension Coverage Decline in the 1980s?" at the American Economic Association meetings, 1992, with William Even.

Participation in Regional Meetings

Presented "Unions and Pension Performance: The Role of Pension Design," at Southern Economics Association meetings, November 2009.

Panel member, "Recent Federal Reserve Policy: An Evaluation" at Southern Economics Association meetings, November 2009.

Discussant, "Topics in Health Economics," at Southern Economics Association meetings, November 2009.

Discussant, "Teacher Pay, Principals, and Schooling," at Southern Economics Association meetings, November 2009.

Presented "Is Bigger Still Better?: The Decline of the Wage Premium at Large Firms," at Western Economic Association meetings, July 2009.

Presented "Is Bigger Still Better?: The Decline of the Wage Premium at Large Firms," at Eastern Economic Association meetings, February 2009.

Panel Discussant at the Southern Economic Association meetings, November 2008.

Presented "Is Bigger Still Better?: The Decline of the Wage Premium at Large Firms," at Southern Economic Association meetings, November 2008.

Presented "The Growth of Participant Direction in Defined Contribution Pensions," at Western Economic Association meetings, July 2008.

Chair "Pensions and Retirement" Session at Southern Economic Association meetings, November 2007.

Presented "The Growth of Participant Direction in Defined Contribution Pensions," at Southern Economic Association meetings, November 2007.

Presented, "Participant Direction in Defined Contribution Pension Plans," at Southern Economic Association meetings, November 2006.

Panel Discussant, Southern Economic Association meetings, November 2005.

Presented, "Do Pensions Impede Phased Retirement?" at the Southern Economic Association meetings, November 2004.

Presented, "When Will the Gender Gap in Retirement Income Narrow?" at the Southern Economic Association meetings, November 2003.

Presented, "How Will the Growth of DC and 401(k) Plans Affect Pension Income?" at the Southern Economic Association meetings, November 2002.

Presented, "Racial Composition, Wages, and Quality Sorting," at the Southern Economic Association meetings, November 1999.

Presented, "Racial and Ethnic Differences in Pension Coverage and Benefit Levels," at the Southern Economic Association meetings, November 1998.

Presented, "Factors Influencing Participation and Contribution Levels in 401(k) Plans," at the Western Economics Association meetings, July 1998.

Presented, "Aging at Work: Employment Determination, Firm Strategies, and Public Policy in the United States," at the Western Economic Association meetings, July 1994.

Presented, "Why Did Male Pension Coverage Decline in the 1980s?" at the Western Economic Association meetings, July 1992.

Presented "Plant Size and the Decline of Unionism," at the Southern Economic Association meetings, 1989, with William Even.

Panel Discussant, Southern Economic Association meetings, November 1989.

Presented "The Labor Force Participation and Earnings Profiles of Married Female Immigrants," at the Southern Economic Association meetings, November 1988.

Presented "Pensions, Screening, and the Gender Wage Gap," at the Southern Economic Association meetings, November 1988.

Session Chair and Panel Discussant at the Southern Economic Association meetings, November 1988.

Participation in Invited Seminars, Conferences, and other Presentations

Presented, "Teaching Macroeconomics During Troubled Times," at Creative Ideas for Your Basic Economics Course Conference at Florida State University, February 2012.

Presented, "Participant Direction in Defined Contribution Pension Plans," at Pennsylvania State University, April 2010.

Presented, "The Parallels Between the Japanese Economic Crisis of the 1990s and the US Today" at Creative Ideas for Your Basic Economics Course Conference at Florida State University, February 2010.

Chair "Minimum Wage & EITC" Session at Society of Labor Economists meetings, May 2009.

Presented "Participant Direction in Defined Contribution Plans," at Lehigh University, April 2009.

Presented "Is Bigger Still Better?: The Decline of the Wage Premium at Large Firms," at Association of Private Enterprise Education meetings, April 2009.

Presented "The Growth of Participant Direction in Defined Contribution Pensions," at Trinity University, October 2008.

Presented "The Growth of Participant Direction in Defined Contribution Pensions," at Georgia State University, April 2008.

Presented "The Growth of Participant Direction in Defined Contribution Pensions," at Association of Private Enterprise Education meetings, April 2008.
Presented, "Improving Pension Coverage at Small Firms," at Hudson Institute, May 2006.

Presented, "Participant Direction in Defined Contribution Plans," at Society of Labor Economics meetings, May 2006.

Presented, "Participant Direction in Defined Contribution Plans," at Association of Private Enterprise Education meetings, April 2006.

Presented, "Participant Direction in Defined Contribution Plans," at University of Wisconsin-Milwaukee, April 2006.

Invited Panel Participant for Pepper Foundation and Center Symposium on pension reform, Washington, DC, February 2006.

Presented, "The Risk and Return of Pension Investments in Employer Stock," at West Virginia University, April 2005.

Presented, "The Risk and Return of Pension Investments in Employer Stock," at the University of Kentucky, November 2004.

Presented, "The Causes and Consequences of Company Stock Holdings in Pension Funds," at the Federal Reserve Bank of Atlanta, April 2004.

Presented, "The Causes and Consequences of Company Stock Holdings in Pension Funds," at the University of Oklahoma, February 2004.

Presented, "Tracking Union and Nonunion Wages in the U.S.: Can the Evidence be Reconciled?" at the Middlebury Annual Conference on Economic Issues, April 2002.

Presented, "How Will the Growth of DC and 401(k) Plans Affect Pension Income?" at the Miami University Center for Pension and Retirement Research Conference, June 2001.

Presented, "Benefits and Worker Productivity," Benefits for the Workplace of Tomorrow Conference, Wharton School, University of Pennsylvania, May 2001.

Participant, Innovations in Managing the Financial Risks of Retirement Conference, Wharton School, University of Pennsylvania, May 2000.

Presented "Using Hi-Tech in Large Lectures," at Association of Private Enterprise Education meetings, April 2000.

Presented "Employee Participation in 401(k) Plans," at University of Wisconsin-Milwaukee, October 1999.

Presented "Gender, Race, and Ethnicity in the Labor Market," as part of the Smith Chair course in Labor Economics at Brigham Young University, September 1999.

Presented, "The Decline in Pension Coverage Among Less Educated Workers," at the Florida State University Economics Department Seminar Series, 1996.

Presented, "Children's Effects on Women's Labor Market Attachment and Earnings" at the Conference on the Changes in Working Time in Canada and the United States, Canadian Employment Research Forum, 1996.

Presented, "Earnings, Rents, and Competition in the Airline Labor Market" at the Ohio State University Economics Department Seminar Series, 1996.

Presented, "Earnings, Rents, and Competition in the Airline Labor Market" at the Florida State University Economics Department Seminar Series, 1995.

Presented, "Employer Size and Labor Turnover: The Role of Pensions," at Syracuse University, 1995.

Presented, "Earnings, Rents, and Competition in the Airline Labor Market" while visiting scholar at the Federal Reserve Bank of Cleveland, 1995.

Fiscal Note Summary

State and local governments estimate no direct costs or savings from the proposal, but operating costs could increase by an unknown annual amount that could be significant. State and local government tax revenue could change by an unknown annual amount ranging from a $2.9 million decrease to a $214 million increase depending on business decisions.

STATE AUDITORS OFFICE

RE: Petition approval request from Richard Von Glahn regarding a proposed statutory amendment to Chapter 290, Version 8 (2018-203)

Dear Auditor Galloway:

Enclosed please find an initiative petition sample sheet for a proposal to amend the Revised Statutes of Missouri filed by Richard Von Glahn on April 3, 2017.

We are referring the enclosed petition sample sheet to you for the purposes of preparing a fiscal note and fiscal note summary as required by Section 116.332, RSMo. Section 116.175.2, RSMo requires the state auditor to forward the fiscal note and fiscal note summary to the attorney general within twenty days of receipt of the petition sample sheet.

Thank you for your immediate consideration of this request.

Sincerely,

John R. Ashcroft

Be it enacted by the people of the state of Missouri:

Sections 290.502, 290.512, and 290.527 of the Revised Statutes of Missouri are amended and a new section to be known as section 290.529 is enacted to read as follows:

290.502. 1. Except as may be otherwise provided pursuant to sections 290.500 to 290.530, effective January 1, 2007, every employer shall pay to each employee wages at the rate of $6.50 per hour, or wages at the same rate or rates set under the provisions of federal law as the prevailing federal minimum wage applicable to those covered jobs in interstate commerce, whichever rate per hour is higher.

2. The minimum wage shall be increased or decreased on January 1, 2008, and on January 1 of successive years, by the increase or decrease in the cost of living. On September 30, 2007, and on each September 30 of each successive year, the director shall measure the increase or decrease in the cost of living by the percentage increase or decrease as of the preceding July over the level as of July of the immediately preceding year of the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) or successor index as published by the U.S. Department of Labor or its successor agency, with the amount of the minimum wage increase or decrease rounded to the nearest five cents.

3. Except as may be otherwise provided pursuant to sections 290.500 to 290.530, and notwithstanding subsection (1) of this section, effective January 1, 2019, every employer shall pay to each employee wages at the rate of not less than $8.50 per hour, or wages at the same rate or rates set under the provisions of federal law as the prevailing federal minimum wage applicable to those covered jobs in interstate commerce, whichever rate per hour is higher. Thereafter, the minimum wage established by this subsection shall be increased each year by $.75 per hour, effective January 1 of each of the next six years, until it reaches $13.00 per hour, effective January 1, 2025. Thereafter, the minimum wage established by this subsection shall be increased or decreased on January 1, 2026, and on January 1 of successive years, per the method set forth in subsection (2) of this section. If at any time the federal minimum wage rate is above or is thereafter increased above the minimum wage then in effect under this subsection, the minimum wage required by this subsection shall continue to be increased pursuant to this subsection (3), but the higher federal rate shall immediately become the minimum wage required by this subsection and shall be increased or decreased per the method set forth in subsection (2) for so long as it remains higher than the state minimum wage required and increased pursuant to this subsection.

4. For purposes of this section, the term "public employer" means an employer that is the state or a political subdivision of the state, including a department, agency, officer, bureau, division, board, commission, or instrumentality of the state, or a city, county, town, village, school district, or other political subdivision of the state. Subsection (3) of this section shall not apply to a public employer with respect to its employees. Any public employer that is subject to subsections (1) and (2) of this section shall continue to be subject to those subsections.

290.512. 1. [No] Except as provided in subsection (2) of this section, no employer of any employee who receives and retains compensation in the form of gratuities in addition to wages is required to pay wages in excess of fifty percent of the minimum wage rate specified in sections 290.500 to 290.530, however, total compensation for such employee shall total at least the minimum wage specified in sections 290.500 to 290.530, the difference being made up by the employer.

2. Beginning January 1, 2019 and effective on the dates set forth below in this subsection, and notwithstanding the percentage established in subsection (1) of this section, no employer of any employee who receives and retains compensation in the form of gratuities in addition to wages is required to pay wages in excess of the percent set forth below in this subsection of the minimum wage rate specified in subsection (3) of section 290.502 or, where applicable, the minimum wage rate otherwise specified in sections 290.500 to 290.530:

(1) fifty-one percent, effective January 1, 2019;
(2) fifty-three percent, effective January 1, 2020;
(3) fifty-five percent, effective January 1, 2021;
(4) fifty-seven percent, effective January 1, 2022;
(5) fifty-eight percent, effective January 1, 2023;
(6) sixty percent, effective January 1, 2024;

however, in all cases, total compensation for such employee shall total at least the minimum wage specified in subsection (3) of section 290.502 or, where applicable, the minimum wage rate otherwise specified in sections 290.500 to 290.530, the difference being made up by the employer.

3. For purposes of this section, the term "public employer" means an employer that is the state or a political subdivision of the state, including a department, agency, officer, bureau, division, board, commission, or instrumentality of the state, or a city, county, town, village, school district, or other political subdivision of the state. Subsection (2) of this section shall not apply to a public employer with respect to its employees. Any public employer that is subject to subsection (1) of this section shall continue to be subject to that subsection at

the percentage set forth therein of the minimum wage rate specified in subsections (1) and (2) of section 290.502 or, where applicable, the minimum wage rate otherwise specified in sections 290.500 to 290.530.

[2.] 4. If an employee receives and retains compensation in the form of goods or services as an incident of his employment and if he is not required to exercise any discretion in order to receive the goods or services, the employer is required to pay only the difference between the fair market value of the goods and services and the minimum wage otherwise required to be paid by sections 290.500 to 290.530. The fair market value of the goods and services shall be computed on a weekly basis. The director shall provide by regulation a method of valuing the goods and services received by any employee in lieu of the wages otherwise required to be paid under the provisions of sections 290.500 to 290.530. He shall also provide by regulation a method of determining those types of goods and services that are an incident of employment the receipt of which does not require any discretion on the part of the employee.

290.527. Any employer who pays any employee less wages than the wages to which the employee is entitled under or by virtue of sections 290.500 to 290.530 shall be liable to the employee affected for the full amount of the wage rate and an additional [equal] amount equal to twice the unpaid wages as liquidated damages, less any amount actually paid to the employee by the employer and for costs and such reasonable attorney fees as may be allowed by the court or jury. The employee may bring any legal action necessary to collect the claim. Any agreement between the employee and the employer to work for less than the wage rate shall be no defense to the action. All actions for the collection of any deficiency in wages shall be commenced within [two] three years of the accrual of the cause of action.

290.529. Except in the circumstances set forth in section 290.523, all the provisions of sections 290.500 to 290.530 are severable. If any provision, including any section, subsection, subdivision, paragraph, sentence, or clause, of sections 290.500 to 290.530, or the application thereof to any person or circumstance, is found by a court of competent jurisdiction to be invalid, unconstitutional, or unconstitutionally enacted, such decision shall not affect other provisions or applications of sections 290.500 to 290.530 that can be given effect without the invalid, unconstitutional, or unconstitutionally enacted provision or application.

MISSOURI STATE AUDITOR'S OFFICE
FISCAL NOTE (18-203)

Subject

Initiative petition from Richard Von Glahn regarding a proposed amendment to Chapter 290 of the Revised Statutes of Missouri. (Received April 4, 2017)

Date

April 24, 2017

Description

This proposal would amend Chapter 290 of the Revised Statutes of Missouri.

The amendment is to be voted on in November 2018.

Public comments and other input

The State Auditor's office requested input from the **Attorney General's office,** the **Department of Agriculture,** the **Department of Economic Development,** the **Department of Elementary and Secondary Education,** the **Department of Higher Education,** the **Department of Health and Senior Services,** the **Department of Insurance, Financial Institutions and Professional Registration,** the **Department of Mental Health,** the **Department of Natural Resources,** the **Department of Corrections,** the **Department of Labor and Industrial Relations,** the **Department of Revenue,** the **Department of Public Safety,** the **Department of Social Services,** the **Governor's office,** the **Missouri House of Representatives,** the **Department of Conservation,** the **Department of Transportation,** the **Office of Administration,** the **Office of State Courts Administrator,** the **Missouri Senate,** the **Secretary of State's office,** the **Office of the State Public Defender,** the **State Treasurer's office, Adair County, Boone County, Callaway County, Cass County, Clay County, Cole County, Greene County, Jackson County, Jasper County, St. Charles County, St. Louis County, Taney County,** the **City of Cape Girardeau,** the **City of Columbia,** the **City of Jefferson,** the **City of Joplin,** the **City of Kansas City,** the **City of Kirksville,** the **City of Mexico,** the **City of Raymore,** the **City of St. Joseph,** the **City of St. Louis,** the **City of Springfield,** the **City of Union,** the **City of Wentzville,** the **City of West Plains, Cape Girardeau 63 School District, Hannibal 60 School District, State Technical College of Missouri, Metropolitan Community College, University of Missouri, St. Louis Community College, University of Central Missouri, Harris-Stowe State University, Lincoln University, Missouri State University, Missouri Southern State University, Missouri Western State University, Northwest Missouri State University, Southeast Missouri State University, Truman State University, Kansas City Board of Police Commissioners, The Metropolitan Police Department - City of St. Louis,** the **St. Louis County Board of Elections,** the **Board of Election**

Commissioners City of St. Louis, the **Kansas City Board of Election Commissioners,** the **Platte County Board of Elections,** the **Jackson County Election Board,** and the **Clay County Board of Election Commissioners**.

Lara Granich and **Missouri Jobs with Justice Voter Action** provided information as proponents of the proposal to the State Auditor's office.

Robert Bonney, Chief Executive Officer of the Missouri Restaurant Association provided information as an opponent of the proposal to the State Auditor's office.

Assumptions

Officials from the **Attorney General's office** indicated they expect that, to the extent that the enactment of this proposal would result in increased litigation, they can absorb the costs associated with that increased litigation using existing resources. However, if the enactment of this proposal were to result in substantial additional litigation, they may request additional appropriations. They do not expect that the enactment of this proposal would result in any other increased costs to their office.

Officials from the **Department of Agriculture** indicated there is no fiscal impact to their department for this initiative petition.

Officials from the **Department of Economic Development** indicated no impact to their department.

Officials from the **Department of Higher Education** indicated this initiative petition would not have a fiscal impact on their department since public employers are exempt from the new provisions proposed.

Officials from the **Department of Health and Senior Services** indicated this proposal would have no direct fiscal impact on their department since government employees are exempt from its provisions. However, employees of certain entities that receive funding through the department's budget would be impacted, such as Medicaid Home and Community Based Services vendors/providers and Area Agencies on Aging.

Officials from the **Department of Insurance, Financial Institutions and Professional Registration** indicated this petition, if passed, will have no cost or savings to their department.

Officials from the **Department of Mental Health** indicated this proposal creates no direct obligations or requirements to their department that would result in a fiscal impact.

Officials from the **Department of Natural Resources** indicated their department defers to the Office of Administration to determine the fiscal impact of this proposal.

Officials from the **Department of Corrections** indicated they defer to the Office of Administration.

Officials from the **Department of Labor and Industrial Relations** indicated no fiscal impact on their department.

Officials from the **Department of Revenue** indicated this petition will have no fiscal impact on their department. Their department defers to the Office of Administration for a state impact.

Officials from the **Department of Public Safety - Office of the Director** indicated they will defer to the response provided for this initiative petition by the Office of Administration - Human Resources.

Officials from the **Department of Social Services** indicated no fiscal impact on their department. They defer to the Office of Administration.

Officials from the **Governor's office** indicated there should be no added cost or savings to their office.

Officials from the **Missouri House of Representatives** indicated no fiscal impact to their office.

Officials from the **Department of Conservation** indicated that no adverse fiscal impact to their department would be expected as a result of this proposal.

Officials from the **Department of Transportation** indicated unknown fiscal impact.

Officials from the **Office of Administration** indicated the proposal amends Sections 290.502, 290.512, 290.527, RSMo and adds Section 290.529, RSMo.

Section 290.502, RSMo, increases the minimum wage to $8.50 per hour, beginning January 1, 2019 and by another $0.75 per hour each year until it reaches $13.00 per hour beginning January 1, 2025. Thereafter, the minimum wage will be adjusted annually based on the increase/decrease in the cost of living.

Section 290.512, RSMo, increases the base salary for tipped employees. Effective January 1, 2019, employers must pay at least 51% of the minimum wage rate to tipped employees. Each year thereafter the rate increases until January 1, 2024 when tipped employees should be paid 60% of the minimum wage as established in Section 290.502, RSMo.

The proposal exempts public employers from both requirements; therefore there would be no cost to the State of Missouri.

Because no tax rates are affected, there is no direct impact on general and total state revenues. However, these proposals may have several indirect affects which could impact revenue collections by an unknown amount, including but not limited to:

- Increased wages for certain employees. According to the US BLS, in 2015, Missouri had 57,000 hourly employees earning wages at or below the federal minimum wage;[1]
- Increased consumption by those employees;
- Lower overall employment (if employers choose to hold costs steady);
- Lower business investment (if employers' payrolls increase);
- Increased prices as firms pass–through labor costs.

This proposal should not impact their office.

Officials from the **Office of State Courts Administrator** indicated there is no fiscal impact on the courts.

Officials from the **Missouri Senate** indicated no fiscal impact on their office.

Officials from the **Secretary of State's office** indicated their office is required to pay for publishing in local newspapers the full text of each statewide ballot measure as directed by Article XII, Section 2(b) of the Missouri Constitution and Section 116.230-116.290, RSMo. Their office is provided with core funding to handle a certain amount of normal activity resulting from each year's legislative session. Funding for this item is adjusted each year depending upon the election cycle with $1.3 million historically appropriated in odd numbered fiscal years and $100,000 appropriated in even numbered fiscal years to meet these requirements. Through FY (fiscal year) 2013, the appropriation had historically been an estimated appropriation because the final cost is dependent upon the number of ballot measures approved by the General Assembly and the initiative petitions certified for the ballot. In FY 2015, the General Assembly changed the appropriation so that it was no longer an estimated appropriation. In FY 2017 their office was appropriated $2.6 million to publish the full text of the measures. In FY 2017, at the August and November elections, there were 6 statewide Constitutional Amendments or ballot propositions that cost $2.4 million to publish (an average of $400,000 per issue). Their office will continue to assume, for the purposes of this fiscal note, that it should have the full appropriation authority it needs to meet the publishing requirements. Because these requirements are mandatory, they reserve the right to request funding to meet the cost of their publishing requirements if the Governor and the General Assembly again change the amount or continue to not designate it as an estimated appropriation.

Officials from the **Office of the State Public Defender** indicated this initiative petition will not have any significant impact on their office.

Officials from the **State Treasurer's office** indicated this proposal would have no impact on their office, as it would not apply to state employees.

Officials from **Greene County** indicated there are no estimated costs or savings to report from their county for this initiative petition.

[1] http://www.bls.gov/opub/reports/minimum-wage/2015/home.htm

Officials from the **City of Kansas City** indicated this petition may have a small negative fiscal impact on their city as a result of the increased hourly minimum wage being higher than the hourly rate paid some city employees.

Officials from the **City of Raymore** indicated no fiscal impact.

Officials from **University of Missouri** indicated they are not able to estimate any significant financial impact on their university.

Officials from **University of Central Missouri** indicated they estimate no fiscal impact since they are excluded under the public employer definition in section 4.

Officials from the **Missouri State University** indicated no fiscal impact.

Officials from **Missouri Southern State University** indicated they do not anticipate any fiscal impact from this initiative petition.

Officials from **Missouri Western State University** indicated the wording is unclear as to whether Colleges/Universities are included in this petition. In assuming they are included, they calculate the following significant fiscal impact to their university. The proposal will have a severe negative fiscal impact on the university. With the proposed minimum wage increase beginning in 2019 at $8.50 per hour and proposed .75 annual increases for the next six years their payroll expenditures will increase steadily reaching a $2,039,000.00 projected increase in 2025. These additional expenditures will have a severe negative impact on the university.

Officials from the **Kansas City Board of Election Commissioners** indicated no fiscal effect on their operations.

Officials from the **Platte County Board of Elections** indicated no fiscal impact.

Officials from the **Jackson County Election Board** indicated this petition does not have a fiscal impact on their office.

Lara Granich and **Missouri Jobs with Justice Voter Action** provided the following information as proponents of this initiative petition.

Re: Fiscal Impact Analysis of Minimum Wage Initiative Petitions

Summary of Proposed Minimum Wage Initiatives						
Version Number		**Initiative Summary**				
Version Number Used in This Impact Analysis	**Version Number Assigned by the Secretary of State**	**Minimum Wage Level**	**Matches the Federal Minimum Wage When It Is Higher**	**Stronger Penalty for Wage Violations**	**Tipped Worker Minimum Wage (as a % of Full Minimum Wage)**	**Allows Localities to Enact a Local Minimum Wage**
Version 13	2018 - 204	$12 by 2023 *(Start at $8.60 and $.85/year)*	Yes	Yes	No Change	No
Version 14	2018 - 205	$12 by 2023 *(Start at $8.60 and $.85/year)*	Yes	No	No Change	No
Version 15	2018 - 206	$12 by 2023 *(Start at $8.60 and $.85/year)*	No	No	No Change	No
Version 16	2018 - 207	$12 by 2024 *(Start at $8.50 and $.70/year)*	Yes	Yes	No Change	No
Version 17	2018 - 208	$12 by 2024 *(Start at $8.50 and $.70/year)*	Yes	No	No Change	No
Version 18	2018 - 209	$12 by 2024 *(Start at $8.50 and $.70/year)*	No	No	No Change	No

Version 19	2018 - 210	$13 by 2025 *(Start at $8.50 and $.75/year)*	Yes	Yes	No Change	No
Version 20	2018 - 211	$13 by 2025 *(Start at $8.50 and $.75/year)*	Yes	No	No Change	No
Version 21	2018 - 212	$13 by 2025 *(Start at $8.50 and $.75/year)*	No	No	No Change	No
Version 22	2018 - 213	$11 by 2022 (Start at $8.75 and $.75/year)	Yes	Yes	No Change	No
Version 23	2018 - 214	$11 by 2022 (Start at $8.75 and $.75/year)	Yes	No	No Change	No
Version 24	2018 - 215	$11 by 2022 (Start at $8.75 and $.75/year)	No	No	No Change	No
Version 25	2018 - 216	$11 by 2021 (Start at $9; $1/year)	Yes	Yes	No Change	No
Version 26	2018 - 200	$12 by 2022 (Start at $9; $1/year)	Yes	No	No Change	No
Version 27	2018 - 201	$13 by 2023 (Start at $9; $1/year)	Yes	No	No Change	No
Version 28	2018 - 202	$12 by 2024 (Start at $8.25; .75/year)	Yes	Yes	100%	No
Version 29	2018 - 203	$13 by 2025 (Start at $8.50; .75/year)	Yes	Yes	60%	No
Version 30	2018 - 196	$12 by 2022 (Start at $9; $1/year)	Yes	Yes	100%	Yes
Version 31	2018 - 197	$12 by 2022 (Start at $9; $1/year)	Yes	Yes	60%	Yes
Version 32	2018 - 198	$13 by 2023 (Start at 9; $1/year)	Yes	Yes	100%	Yes

Version 33	2018 - 199	$13 by 2023 (Start at $9; $1/year)	Yes	Yes	60%	Yes

This letter is from Lara Granich and Missouri Jobs with Justice Voter Action, proponents of the above-referenced Minimum Wage Initiative Petitions. Pursuant to RSMo. Section 116.175, we write to submit the following fiscal impact information to assist your office in its analysis of the fiscal impact of the above-mentioned seven proposed Minimum Wage Initiative Petitions.

Our analysis estimates the impact of the proposed Minimum Wage Initiative Petitions on state and local sales and personal income tax revenue in Missouri. We follow the process that has been used in the past to estimate the impact of minimum initiative petitions on state and local sales and personal income tax revenue, with some refinements. We also address certain claims that have been made by opponents of similar initiative petitions in the past.

As these petitions exclude public workers from the proposed minimum wage increases, we do not include in our analysis an estimate of the impact on state and local payroll costs of the proposed Minimum Wage Initiative Petitions.

I. Estimate of Number of Workers Affected Statewide and the Impact on Their Wages

Table 1. Summary of the Number of Affected Workers and Aggregate Wage Increases for Missouri in the Final Year of Minimum Wage Implementation.

Proposal	Year of Peak Minimum Wage (MW)	Proposed Peak MW	Tipped MW in Peak MW Year	Workers Affected by MW increase	Aggregate Annual Wage Increase in Nominal Dollars
13,14,15[a]	2023	$ 12.00	$ 6.00	835,350	$4,358,798,129
16,17,18[a]	2024	$ 12.00	$ 6.00	819,652	$4,209,438,048
19,20,21[a]	2025	$ 13.00	$ 6.50	900,788	$5,309,336,662
22,23,24[a]	2022	$ 11.00	$ 5.50	738,515	$3,347,138,756
25	2021	$ 11.00	$ 5.50	761,164	$3,469,534,559
26	2022	$ 12.00	$ 6.00	852,284	$4,510,285,824
27	2023	$ 13.00	$ 6.50	949,801	$5,667,065,534
28	2024	$ 12.00	$ 9.60	832,328	$4,288,614,460
29	2025	$ 13.00	$ 7.80	905,942	$5,332,471,496
30	2022	$ 12.00	$ 8.40	864,090	$4,558,317,729
31	2022	$ 12.00	$ 6.84	855,887	$4,523,341,931

32	2023	$ 13.00	$ 9.75	948,421	$5,745,051,956
33	2023	$ 13.00	$ 7.54	942,566	$5,685,951,766

Notes: Author's Analysis of American Community Survey (ACS) Data from 2014.
(a) Since these proposals only vary on non-economic factors, their economic and fiscal impacts are treated as equal for the purposes of this report.

Across the proposals analyzed, the total aggregate wage increase for workers in Missouri ranges from a low of $3.347 billion (Proposals 22-24) to a high of $5.745 billion under Proposal 32. While some proposals have the same final impact numbers, they have different impacts in the initial years (not listed) based on the relative pace of increases in earlier years. A full, year-by-year impact analysis is presented in Appendix Tables A1 through A13 below.

The wage impact of an increase in the minimum wage for the state of Missouri is calculated using the following procedure. The American Community Survey (ACS) Public Use Micro Sample for the most recent year available (2014) for the state of Missouri was downloaded from the US Census Bureau. The American Community Survey was chosen over the Current Population survey because the ACS has a significantly larger sample. We followed the method of Perry, Thomason, and Bernhardt (2016) for calculating an hourly wage rate from the ACS based on observed total annual wage income, typical hours worked each week and weeks worked per year. Since ACS income figures are clustered around whole-numbers, we smoothed the wage distribution by randomly adding or subtracting $0.25 from each wage figure.

Wage adjustments were made only for those individuals earning less than the proposed minimum wage, or proposed tipped minimum wage. We did not make additional adjustments for the "ripple effect" of minimum wage increases on workers earning slightly above the new threshold. Recent evidence suggests that workers earning up to 15 percent above of the minimum wage also receive small increases in response to a minimum wage increase. (See Wicks-Lim (2006) and Dube, Giuliano and Leonard (2015).) Thus, the estimated impacts listed above are likely to be smaller than the actual impact of increasing the minimum wage to the proposed level.

The proposed minimum wage increases exclude public employees. However, it was not practicable to exclude public employees from these calculations because the ACS does not have a published variable that allows for identification of public employees. Nonetheless, this inclusion of public employees should have only a minimal impact on our results, since their numbers are small and most already earn more than the proposed minimum wage increases.[1]

All wages from the 2014 survey were adjusted upward to account for inflation between the time of the survey and the time of measurement of the impact. Actual rates of inflation were used to adjust wages up to 2016. For all subsequent years between 2017 and 2028, baseline wages were adjusted using the projected annual average rate of change in the Consumer Price Index for Urban Workers (CPI-U) for the Midwest region. The 2015 and 2016 Missouri Minimum wage of $7.65 was adjusted by the same factor prior to measuring the impact of a change to the proposed minimum wage in 2019.

After these adjustments, the resulting hourly wage of all employees was compared to the proposed minimum wage. A total of twenty-one proposals were analyzed. For each proposal, we constructed a baseline wage scenario that used only basic wage changes from expected inflation rates to predict each ACS respondent's hourly wage rate in each year

[1] For Missouri's state employees, this can be validated by viewing the earnings of all state employees at: http://mapyourtaxes.mo.gov/MAP/Employees/. In larger counties and cities most all public employees already earn more than the highest proposed minimum wage. Smaller counties and towns may have some public employees who earn less than the highest proposed minimum.

between 2019 and 2028. We then constructed a counterfactual, or "proposed" wage distribution for each worker under all twenty-one minimum wage proposed scenarios. Since the minimum wage proposals offer nine different paths for raising the minimum wage for all non-tipped private sector workers, and different wage paths for tipped workers, we create separate minimum wage changes for tipped and non-tipped workers. Specifically, we used information on a worker's occupation and observed wage levels to separately identify tipped workers and assign them the proposed tipped minimum wage in each year, rather than the higher non-tipped minimum wage.[2]

If the proposed minimum wage was less than the inflation-adjusted hourly earnings of an employee, then no impact was calculated. If the proposed minimum wage was more than the hourly earnings for an employee, then the difference between the inflation-adjusted hourly earnings (i.e. baseline) and the proposed minimum wage was calculated. That difference was multiplied by the number of hours the employee worked in the year to calculate the annual impact for that employee. The result was then multiplied by a weighing factor for that employee in the population. The total impact for the state of Missouri was then summed across all affected workers to generate a total estimated increase in wage income in the state.

We do not include an estimate of job losses due to minimum wage changes. Existing research is clear that past minimum wage increases have had no measurable effect on aggregate employment levels. Larger minimum wage increases, such as those in Los Angeles, Seattle, and other jurisdictions, have not yet been studied to detect a clear disemployment effect. While it is possible that there may be some employment losses due to automation or other factors, this potential negative effect is likely offset by the positive potential job growth stemming from multiplier effects of the spending of minimum wage workers who receive substantial raises. There is substantial research to indicate that increases in the minimum wage have multiplier effects that increase the direct effects. For this reason and because of the likely increases in wages for individuals who earn above the proposed minimum wage rates, the impacts summarized in the table are considered conservative estimates relative to the total impact that would occur as a result of increasing the minimum wage to the proposed levels.

II. Economic Literature on the Impact of Minimum Wage Increases on Employment

Next, it is necessary to review the economic literature on the impact of minimum wage increases on employment. Opponents often claim that minimum wage increases may reduce employment in a state. If that is true, then those employment reductions would result in reductions in state income and sales tax revenue. However, review of the most credible recent empirical research on the minimum wage shows that increases in the minimum wage have had no discernible impact on employment. We thus conclude that it is not appropriate to project that the proposed initiative petitions would result in any detectable employment reduction, and resulting losses in income and sales tax revenue, or increases in unemployment-related costs to the state.

Economists have conducted hundreds of studies of the employment impact of the minimum wage. A recent meta-study – a formal statistical study of studies – by Doucouliagos and Stanley (2009) reviewed all the research conducted over the last three decades on the employment impact of minimum wage increases on teenagers in the United States. The researchers concluded that the minimum wage has little or no discernible effect on the employment prospects of low-wage workers. Their study followed a rigorous, peer-reviewed procedure and has the advantage of using a set of predetermined, objective criteria for weighing the validity of statistical findings across studies with different results.

[2] We defined tipped workers as those employed in occupations that typically receive a large share of income as tips. These occupations were 'Bartenders' (4040), 'Waiters and Waitresses', 'Food Servers, Non-restaurant' and 'Miscellaneous food preparation and serving related workers including dining room and cafeteria attendants and bartender helpers'.

(Source: Doucouliagos, Hristos and T. D. Stanley. 2009. "Publication Selection Bias in Minimum-Wage Research? A Meta-Regression Analysis." British Journal of Industrial Relations,vol. 47, no. 2, pp. 406-428.)

Recent theoretical and empirical research emphasizes several explanations for the consistently negligible employment impacts of moderate increases in the minimum wage. First, relative to total wage costs, minimum-wage increases are small. Second, employers and workers appear to respond to minimum-wage increases in many ways that reduce the direct cost to employers and substantially reduce or eliminate the need to cut employment.

Probably the most important economic response to a higher minimum wage is a reduction in turnover. At higher wages, employers fill vacancies faster and retain employees longer, boosting total employment and average productivity per worker while reducing direct and indirect training costs. Dube, Lester, and Reich (2012), for example, examined the effect of the minimum wage on labor turnover among teens and restaurant workers. They find "...striking evidence that separations, new hires, and turnover rates for teens and restaurant workers fall substantially following a minimum wage increase..." (p. 2). Their findings, using nationally representative data, are consistent with local case studies of the minimum wage and related "living wage" laws, including Dube, Naidu, and Reich's (2007) analysis of the San Francisco city-wide minimum wage; Fairris's (2005) study of local government contractors in Los Angeles; Howes (2005) on homecare workers in California; and Reich, Hall, and Jacobs (2005) on workers at the San Francisco airport.
(Sources: Dube, Arindrajit, T. William Lester, and Michael Reich. 2012. "Minimum Wage Shocks, Employment Flows and Labor Market Frictions." Berkeley, CA: Institute for Research on Labor and Employment. http://escholarship.org/uc/item/76p927ks; Dube, Arindrajit, Suresh Naidu, and Michael Reich. 2007. "The Economic Effects of a Citywide Minimum Wage." *Industrial and Labor Relations Review*, vol. 60, no. 4, pp. 522-543; Fairris, David. 2005. "The Impact of Living Wages on Employers: A Control Group Analysis of the Los Angeles Ordinance." *Industrial Relations*, vol. 44, no. 1, pp. 84-105; Howes, Candace. 2005. "Living Wages and the Retention of Home Care Workers in San Francisco." *Industrial Relations*, vol. 44, 5 no. 1, pp. 139-163; Reich, Michael, Peter Hall, and Ken Jacobs. 2005. "Living Wage Policies at the San Francisco Airport: Impacts on Workers and Businesses." *Industrial Relations*, vol. 44, no. 1, pp. 106-138.)

Employers also appear to respond to increases in the minimum wage by taking measures to boost productivity. Hirsch, Kaufman, and Zelenska's (2011) study of the impact of the federal minimum wage increase on 81 fast-food restaurants in Georgia and Alabama, for example, asked fast-food managers about the scope for efficiency improvements in response to the minimum-wage rise. About 90 percent of managers indicated that they planned to respond to the minimum wage increase with increased performance standards such as "requiring a better attendance and on-time record, faster and more proficient performance of job duties, taking on additional tasks, and faster termination of poor performers." (p. 27) Roughly the same share of managers said that they sought to "boost morale" by presenting the minimum wage increase as a "challenge to the store" and using this as a way "to energize employees to improve productivity." (pp. 28-29) Based on their interviews with store managers, the researchers concluded that a minimum wage increase may function as a "catalyst or shock that forces managers to step out of the daily routine and think about where cost savings can occur." (p. 29) (Source: Hirsch, Barry T., Bruce Kaufman, and Tetyana Zelenska, "Minimum Wage Channels of Adjustment." IZA Discussion Paper No. 6132. Germany: Institute for the Study of Labor. http://www2.gsu.edu/~ecobth/IZA_HKZ_MinWageCoA_dp6132.pdf)

A higher minimum wage may also motivate workers to work harder, independently of any actions by employers to increase productivity. According to "efficiency wage" theory, wages above the competitive-market rate may elicit greater work effort for several reasons. As Carl Shapiro and Joseph Stiglitz (1984) have argued, higher pay increases the cost to workers of losing their job, potentially inducing greater effort from workers in order to reduce their chances of

being fired. George Akerlof (1982), arguing from a more sociological point of view, has suggested that workers may see higher wages as a gift from employers, leading workers to reciprocate by working harder. (Sources: Shapiro, Carl and Joseph E. Stiglitz. 1984. "Equilibrium unemployment as a worker discipline device." *American Economic Review*, vol. 74, no. 3, pp. 433-444; Akerlof, George A. 1982. "Labor contracts as partial gift exchange." *Quarterly Journal of Economics*, vol. 97, no. 4, pp. 543-569.)

We therefore conclude that the proposed increase in the Missouri minimum wage would have no discernible impact on the employment levels of low-wage workers. Accordingly, we do not factor in reductions in employment, or any resulting decrease in sales tax or income tax. We also do not project any increased unemployment insurance costs – both because we do not project any resulting job losses, and, additionally, because unemployment insurance costs are paid for by employer premiums, and so are ultimately not a cost to the state.

For similar reasons, we do not believe that the proposed increase will have any significant adverse economic impact on small businesses or, by extension, on corporate income tax revenue. In fact, many small businesses already pay little if any corporate income tax.

III. State and Local Sales and Personal Income Tax Revenue Impact of Raising the Minimum Wage

Based on the wage impact figures calculated above, and the understanding that the minimum wage increases would be unlikely to result in offsetting job losses, we next calculate the impact of the projected wage increases on state and local sales and personal income tax revenue in Missouri. We project only the direct impact of the various minimum wage increase scenarios on such tax revenue. We do not attempt to project the additional impact through a GDP multiplier effect, or the potentially higher sales taxes generated if employers offset wage increases with higher prices (which would be taxable).

Personal Income Tax Revenue. In order to determine the projected increase in personal income tax revenues that would result directly from the increased wages, we had to develop assumptions about the effective income tax rates of the affected workers. We made the following assumptions with respect to the effective tax rate:

1. That 25% of affected workers can be claimed as a dependent on another party's Missouri income tax return and, as a result, would pay an effective tax rate of 6.0% on the increase in income;
2. That 50% of the affected workers would file as single taxpayers, would claim one deduction of $2,100, and would be entitled to a standard deduction of $5,800. This would result in an effective tax rate of 2.47%;
3. The remaining 25% would, we assumed, pay no additional Missouri income tax.

In light of these assumptions, the increased Missouri income tax revenue for each petition version can be calculated as follows: (total wage increase * 25% * 6.0%) + (total wage increase * 50% * 2.47%) + (total wage increase *25% * 0%).

Sales Tax Revenue. The state of Missouri imposes a 4.225% state sales tax on those items that are not exempt from the sales tax base. In addition, the average local sales tax rate is 2.95%. As a result, the average Missouri net sales tax rate is 7.175%. To estimate the share of income that is spent on goods and services that are subject to sales taxes, we used data from the 2015 Consumer Expenditure Survey (CES) for the US to estimate the share of income spent on categories that are subject to sales taxes. The CES summary tables list average spending per consumer across 20 different

categories (e.g. housing, transportation, food away from home) and we categorized each spending item as taxable or non-taxable and then calculated the share of spending that we taxable.[3] The resulting rate was 30.3 percent.

Based upon the above assumptions, and the total wage increase calculations for each version of the petition, we estimate that the increase in state income tax revenue resulting from the increased wages would be as follows:

Table 2. Summary of the Impact of Minimum Wage Increases on State and Local Sales and Income Taxes in Year of Full Minimum Wage Final Implementation.

Proposal	State Sales Tax (4.225%)	Local Sales Tax Revenue (2.95%)	Total Sales Tax Revenue Increase	Personal Income Tax Revenue	Total Sales and Personal Income Tax Revenue Increase
13,14,15[a]	$55,814,587	$38,971,132	$94,785,719	$119,213,129	$213,998,848

Note: Author's Analysis of American Community Survey (ACS) data from 2014 and fiscal impact assumptions described above. All dollars are in nominal figures. (a) Since these proposals only vary on non-economic factors, their economic and fiscal impacts are treated as equal for the purposes of this report.

As described in Table 2 above, the fiscal impact of the proposed minimum wage increases varies based on the ultimate level of the minimum wage and the degree of tipped minimum wage phase out. The estimates of the total fiscal benefit range from $164 million to $282 million annually. Appendix tables A1 through A13 provide a year-by-year summary of the fiscal benefits.

[3] Specifically, the categories we assumed to be subject to state and local sales taxes are: food, household furnishings and equipment, vehicle purchases, gasoline and motor oil, entertainment, and all other expenditures. We assumed that 50 percent of the spending on the category "apparel and services" was taxable.

We hope that this information is useful to your office as your prepare your analyses of the petitions.

Respectfully submitted,

Lara Granich

Robert Bonney, Chief Executive Officer of the Missouri Restaurant Association provided the following information as an opponent of this initiative petition.

These corrections were subsequently provided to the submitted information

In the table on the bottom of page 7 and top of page 8, both averages for 2023 should be based on a 5 year phase-in. Accordingly, the figure on that table should state for 2023 ($12) Average Annual Unemployment Premiums Paid by State of $16,269,523.52.

The corresponding change on the table on page 12 would be to state, for 2023 ($12) Total Net Loss to State Government from Taxes and Unemployment Insurance of ($19,137,851.76).

Re: Initiative Petitions 2018-196 through 2018-216

Dear Mr. Halwes,

I write on behalf of Robert Bonney. Mr. Bonney is the Chief Executive Officer of the Missouri Restaurant Association. Please consider this letter and the accompanying studies as his fiscal impact statement as an opponent of Initiative Petitions 2018-196 through 2018-216 (the "Initiative Petitions"). If passed, any of these twenty-one initiatives would have a substantial negative impact on state and local governments, as well as Missouri small businesses. Those effects are both direct (as noted in Section 1) and secondary (as noted in Sections 2 through 5). The direct effects stem from higher labor and contracting costs that the state and its political subdivisions will incur, despite the Initiatives' effort to exclude government workers from the mandate.

The indirect effects will present a debate this Office has seen before. The proponents of the Initiative Petitions will once again rely on data sourced from political activist groups who claim increases in the minimum wage only serve to create new taxable income. The reality is that such groups approach this issue with political bias. Their analysis is one-sided because it completely ignores the fact that a wage increase does not "create" income from thin air; instead, it is an economic transfer from Missouri businesses to workers. Missouri businesses must pay the new wages "created" by the increases. Political activists' models fail to account, then, for two specific manifestations of the "debit" side of this transfer: reductions in employment, and the reduction in corporate income tax paid based upon business done in Missouri.

The failure to account for any employment effect at any proposed wage increase—even a drastic increase of the minimum wage to $13—is particularly puzzling, because Missouri's most populous areas border Illinois and Kansas. These states, respectively, have minimum wages of $8.25 and $7.25. Neither state adjusts the minimum wage for inflation. Likewise, the second effect—loss of corporate income tax revenues—is a mathematical certainty. Missouri businesses will be the source of the wage increase, which will lower their own taxable income. Assuming a one-to-one substitution of "created" wages for lost corporate income, the difference in the rates

at which these two types of income are taxed will result in a net decrease in state revenue. A dollar from increased wages is taxable by state government in Missouri at 6% or substantially less, whereas Missouri's corporate income tax rate is 6.25%.

On top of these two types of negative outcomes—lower employment and lower state tax revenues—there may be second-order effects to small businesses because they lack the access to capital to weather price fluctuations; they may not survive at all because they may not have the flexibility to simply cut employment, shifting their reliance to capital instead of labor resources, or suffering a decrease in production and revenue.

In short, much of the fiscal impact regarding the current crop of wage-related ballot measures is secondary: they cause transfers of wealth within (or out of) the state economy, and those transfers of wealth then create second-order effects for state and local governments via their collection of tax revenues and provision of welfare services for the unemployed or less-employed. Because these fiscal notes call for the Auditor operate in the area of secondary effects, it is critical that she treat both sides of the wealth transfer equally, and refrain from assessing only one half of the wage increase equation.

1. Direct Labor Cost Impact on State and Local Government Budgets

As noted to the State Auditor's Office previously by Dr. David Macpherson, a nationally prominent labor and economics expert, there are two ways to measure labor cost on state and local government budgets. First, one can use the information included in fiscal note responses from state and local government entities. It is important to note that these fiscal notes provide an incomplete and, therefore, too-low estimate of labor cost. Few state and local government entities respond to requests for a fiscal note response, and those that do respond often ignore important effects.

Second, data from the U.S. Census Bureau's Current Population Survey (CPS) can be used to calculate increased labor cost to state and local government entities in Missouri. To combat this time-honored analysis, and in a blatant attempt to manipulate the fiscal note process, the Initiative Petitions provide that they will raise the minimum wage for private workers, but not for workers employed by state or local governmental entities. No conceivable justification exists for solely raising the minimum wage on private businesses. Whatever the disparity between the value of total compensation at a private business and at a government employer, that disparity does not approach the wage adjustments at issue here, ranging from an inflation adjusted wage increase of 51.16% (($13-$8.60)/$8.60) in Initiative Petitions 2018-198 through 2018-201 to a wage increase of 30.17% (($11-$8.45)/$8.45) in Initiative Petitions 2018-213 through 2018-215.

Moreover, it is unreasonable to assume that on a sustained basis public employers, as defined in the Initiative Petitions, would be able to maintain dramatically lower wage levels than private businesses. Public employers would lose staff employable at higher rates in the private market, imposing substantial costs on government productivity. Using the method traditionally employed by labor economists and followed by the Auditor's office, one can calculate the annual

wage costs to state and local governmental entities, based on the annual wage cost for each state and local government worker in the ORG CPS, as detailed on page 6 of Dr. Macpherson's 2012 report, attached hereto as **Exhibit A**. Even if the auditor finds that a specific estimate of costs is not determinable, the auditor should note that state and local government "operating costs could increase by an unknown annual amount that could be significant," through the form of higher wage costs and higher contracting costs.

The proponents of the Initiative Petitions may argue that the Auditor should abandon any state and local cost estimates altogether. The proponents will argue that provisions they have inserted in the statute would mean that state and local government entities will not have to pay higher wages to their employees. Setting aside unjustifiable discrimination against private employers (and "public employees"), the provision is of uncertain legal effect and constitutionality. A "public employer," defined in the initiatives as "the state or a political subdivision of the state" still incurs substantial costs for wages of individuals that are "private employees," rather than "public employees." Cleaning services, food service, and other essential services often rely on state contracts with outside vendors. Sometimes, a contract rate may vary depending on the cost of labor. Even if the contract rate is fixed, it must be re-bid periodically, and that bidding process would take into account the new minimum wage. Plainly, the initiative would impose higher costs for state and local governments in contracting with any private entity and its employees. As a matter of law, it would be insufficient and unfair for the Auditor's fiscal note or summary to simply assume that these costs to state and local governmental entities do not exist.

2. Cost of Unemployment Benefits

a) The effect of inflation on Missouri's minimum wage

CPS–ORG data show that between 2007 and 2015, median nominal wages for adult (25–59 years old) workers in the U.S. grew by 1.68 percent a year. However, Missouri's minimum wage is currently adjusted using "the percentage increase or decrease as of the preceding July over the level as of July of the immediately preceding year of the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W)." Section 290.502, RSMo. Coincidentally (or perhaps not), the CPI-W, over the period from 2006 to 2016, also increased at an average rate of 1.68 percent a year.

Year	CPI-W	Observed inflation %
2006	199.2	
2007	203.7	0.022590361
2008	216.304	0.061875307
2009	210.526	-0.0267124

2010	213.898	0.016017024
2011	222.686	0.041085003
2012	225.568	0.01294199
2013	230.084	0.02002057
2014	234.525	0.019301646
2015	233.806	-0.00306577
2016	234.771	0.004127353

Using Missouri's current inflation-adjusted minimum wage rate and an assumed, constant 1.68 percent increase in the CPI-W, the minimum wage in Missouri will be as follows:

Year	Estimated Minimum Wage
2016	$7.65 (observed)
2017	$7.70 (observed)
2018	$7.85
2019	$8.00
2020	$8.15
2021	$8.30
2022	$8.45
2023	$8.60
2024	$8.75
2025	$8.90
2026	$9.05

b) Calculating job loss attributable to increased minimum wage

At least one outside economist, James Sherk, has already provided an estimate for job loss in Missouri based on a $15 minimum wage. Mr. Sherk calculated the effect of a $15 minimum wage implemented in 2021. Mr. Sherk's figures accounted for inflation by estimating the present value of $15.00 in 2021, rather than estimating an absolute figure for wage inflation in Missouri. Mr. Sherk calculated the present value of $15.00 in 2021 to be $13.57, per hour, based on wage inflation of 1.68 percent. Mr. Sherk evaluated the change from $7.65 per hour to $13.57 per hour (a 77.39% increase), exclusive of agricultural workers. Cumulatively, Mr. Sherk calculated this 77.39 percent increase in wages to reduce employment in the affected workforce by (0.7739*0.677) 52.39%.

Graves Garrett LLC

Mr. Sherk calculated that approximately 40.9% of Missouri's Wage and Salary Workers would be affected by such a $15 minimum wage. Mr. Sherk's calculations reveal that a $15 minimum wage in 2021 would be expected to reduce the number of full-time equivalent jobs in Missouri by approximately 218,000. Based on CPS–ORG data, these figures reveal an affected workforce of approximately 416,086 workers impacted by a $15 minimum wage increase in 2021.

However, in 2014, Dr. Macpherson found, using more conservative, national-level Congressional Budget Office data, that an increase to a $10.10 minimum wage, effective January 1, 2015, would eliminate about 15,700 jobs in Missouri. Dr. Macpherson analyzed the effect of a Missouri $10.10 minimum wage using a model suitable to a national analysis. This analysis predicted a loss of 15,700 Missouri jobs based on a wage increase from $7.50 in 2014 to $10.10 in 2015 (a 34.67% increase).

On the whole, the analysis by Mr. Sherk is more instructive here, since it is more recent, Missouri-specific, and anticipates larger wage changes contemplated by the Initiative Petitions. The most accurate way to determine the estimate of Workers Affected would be to analyze the CPS–ORG data. However, without such data readily available in the time constraints imposed by the fiscal note process, it is reasonable for estimation purposes to assume Mr. Sherk's figures are evenly distributed. Assuming that worker data follows an equal distribution, the Initiative Petitions would be expected to result in the following job losses:

Year of final prescribed wage increase	Wage without IP	Wage mandated by IP	Percentage increase	Percentage of affected workers who lose jobs (Percentage Increase x 0.677 Elasticity)	Estimate of Workers Affected	Estimate of Missouri Workers Unemployed by Initiative
2021	$8.30	$11.00	32.53%	22.02%	174,897	38,512
2022	$8.45	$11.00	30.18%	20.43%	162,262	33,150
2022	$8.45	$12.00	42.01%	28.44%	225,866	64,236
2023	$8.60	$12.00	39.53%	26.77%	212,532	56,895
2023	$8.60	$13.00	51.16%	34.64%	275,061	95,281
2024	$8.75	$12.00	37.14%	25.15%	199,683	50,220
2024	$8.75	$13.00	48.57%	32.88%	261,136	85,861
2025	$8.90	$13.00	46.07%	31.19%	247,695	77,256
2026	$9.05	$13.00	43.65%	29.55%	234,683	69,349

c) The best estimate for a price elasticity of demand for low-skilled labor is -0.677.

As noted by Mr. Sherk, starting wages of $15.00 per hour mean that full-time employee must create at least $38,700 a year in value for his or her employer (including wages, employer payroll taxes, and mandatory healthcare benefits). High minimum wages and mandatory benefit costs make it much harder for less-experienced and less-skilled workers to find jobs, particularly full-time work.

Recent labor economics scholarship has revealed that, accounting for publication bias, a state-specific elasticity of demand for less-skilled workers is, on average, approximately -0.677, though some estimates are even higher, around -1.0.[1] "[E]conomists have extensively studied how businesses respond to higher wages overall, not just minimum-wage increases. On average these studies find a 10 percent increase in labor costs causes firms to reduce employment of less-skilled workers by 6.8 percent in the long run."[2]

While these elasticity estimates are substantial in absolute terms, there is reason to believe that such estimates might still understate the impact of a Missouri state-specific effort to increase the minimum wage. This is so for several reasons. First, traditionally, labor economists view labor as a reasonably difficult input to substitute; however, Missouri businesses have readily available options. There are relatively few barriers to doing business in Missouri's border states, and businesses can easily relocate across a state line to take advantage of more favorable wage (and tax laws). Additionally, substantially raising the cost for Missouri labor, relative to labor sources in other states and other countries, is likely to force many manufacturing jobs in Missouri to disappear entirely. Automation is also a significant risk. The substitution of labor is becoming increasingly easy due to technology advancements and the "sharing" economy, where fewer individuals are "employees" covered by the minimum wage. Finally, a labor "price shock" may result in significant decreases in the demand for goods and services. People make behavioral changes to avoid higher costs, including eating out less often and generally decreasing consumption (or shifting their activities to consumption involving comparatively low amounts of labor) wherever possible.

[1] Sherk, James, "How $15-per-Hour Minimum Starting Wages Would Affect Each State," The Heritage Foundation, http://report.heritage.org/ib4601.

[2] "The coefficients on these estimates imply an elasticity of –0.677 for a study published in 2012 (the most recent year in their data) of long-run unconditional labor demand for low-skilled labor in the U.S., estimated using industry-level administrative panel data and a structural form model." "Estimates that do not account for publication bias tend to slow a long-run elasticity closer to –1.0. See, for example, George Borjas, Labor Economics, 6th ed. (Columbus, OH: McGraw-Hill, 2013), Chapter 4: 'The evidence also suggests that the estimates of the long-run labor demand elasticity cluster around –1, so the long-run labor demand curve is indeed more elastic than the short-run curve.' " Sherk, available at http://report.heritage.org/ib4601.

Graves Garrett LLC

d) Unemployment Benefit Costs

We derived an average unemployment payout by calculating the expected weekly unemployment benefit amount. Based on current data, the expected unemployment weekly benefit amount of a worker making $7.65 an hour, on a 40 hour workweek, is $159.12 per week, for 20 weeks.[3] The expected unemployment weekly benefit amount of a worker making $10.99 an hour is $228.59 per week. The expected unemployment weekly benefit amount of a worker making $11.99 an hour is $249.39 per week. The expected unemployment weekly benefit amount of a worker making $12.99 an hour is $270.19 per week. We assume that workers will seek unemployment insurance for the full twenty weeks authorized under Missouri law, because unemployment attributable to an increase in the minimum wage is structural. In this case, structural unemployment occurs because workers' job skills do not meet the established "price floor" of labor, rendering the worker's skills unmarketable. Assuming an even distribution of workers affected, the average unemployment benefit cost to the state for a worker is calculated as follows:

- For Initiative Petitions 2018-213 through 2018-216, [($159.12+$228.59)/2]*20 = $3,877.10
- For Initiative Petitions 2018-196, 2018-197, 2018-200, 2018-202, and 2018-204 through 209, [($159.12+$249.39)/2]*20 = $4,085.10
- For Initiative Petitions 2018-198, 2018-199, 2018-201, 2018-203, 2018-210 through 2018-212, [($159.12+$270.19)/2]*20 = $4,293.10

Consistent with Dr. Macpherson's 2012 report, it would be reasonable for the Auditor to assume that 35% of unemployed workers will receive unemployment benefits. Combining these numbers leads to the following estimates:

Year of final prescribed wage increase	Estimate of Missouri Workers Unemployed by Initiative	Estimated Unemployment Amount Per Worker	Estimated Total Unemployment Premiums Paid	Average Annual Unemployment Premiums Paid by State
2021 ($11)	38,512	3,877.10	$52,260,206.32	$17,420,068.77
2022 ($11)	33,150	3,877.10	$44,984,052.75	$11,246,013.19
2022 ($12)	64,236	4,085.10	$91,843,669.26	$22,960,917.32
2023 ($12)	56,895	4,085.10	$81,347,617.58	$20,336,904.39

[3] https://labor.mo.gov/DES/Claims/calculator. A 2015 law decreased the unemployment benefit period from 20 weeks to 13 weeks, but the Supreme Court of Missouri struck down the law in July 2016.

2023 ($13)	95,281	4,293.10	$143,167,801.39	$28,633,560.28
2024 ($12)	50,220	4,085.10	$71,803,802.70	$11,967,300.45
2024 ($13)	85,861	4,293.10	$129,013,450.69	$21,502,241.78
2025 ($13)	77,256	4,293.10	$116,083,706.76	$16,583,386.68
2026 ($13)	69,349	4,293.10	$104,202,767.17	$13,025,345.90

3. Impact on State Income Tax Revenue

The 2012 analysis prepared by Dr. Macpherson may also be used as a reference in calculating the effect of the initiative petitions on state income tax revenue. Here, again, it is reasonable to assume that our "affected workers" are evenly distributed, though precise CPS–ORG data would also provide a reliable estimate. Here, the increased income tax revenue is the additional income tax paid by workers whose wages increase. There is a loss of revenue, however, in the form of decreased income tax paid by workers whose wages decrease and businesses who absorb the increased cost of labor, rather than passing it along to customers.

For the purposes of these estimates, we assume that workers work 40 hours a week and 52 weeks per year:

Year of final prescribed wage increase	Estimate of Workers Affected	Estimate of Missouri Workers Unemployed by IP	Estimate of Missouri Workers with Increased Wages	Annual Increase in Wages Paid to Workers who get Wage Increase in Final Year	Annual Decrease in Wages Paid to Workers now Unemployed
2021 ($11)	174,897	38,512	136,385	$382,969,080.00	$108,141,696.00

2022 ($11)	162,262	33,150	129,112	$342,405,024.00	$87,913,800.00
2022 ($12)	225,866	64,236	161,630	$596,737,960.00	$237,159,312.00
2023 ($12)	212,532	56,895	155,637	$550,332,432.00	$201,180,720.00
2023 ($13)	275,061	95,281	179,780	$822,673,280.00	$436,005,856.00
2024 ($12)	199,683	50,220	149,463	$505,184,940.00	$169,743,600.00
2024 ($13)	261,136	85,861	175,275	$774,715,500.00	$379,505,620.00
2025 ($13)	247,695	77,256	170,439	$726,750,021.03	$329,419,584.00
2026 ($13)	234,683	69,349	165,334	$679,192,072.00	$284,885,692.00

These net wage increases will lead to corresponding increases in state income tax collections. Traditionally, it has been assumed that about 50% of affected workers will pay 6% income tax, while the other 50% of workers pay no state income tax. This assumption may be less accurate at the higher wage increases contemplated by the Initiative Petitions. Accordingly, figures are also displayed assuming that about 75% of affected workers will pay 6% income tax, while the other 25% of workers pay no state income tax.

Annual Net Increase in Wages Paid To Workers	Annual Income Tax Increase from Wage Increase (50% pay tax)	Annual Income Tax Increase from Wage Increase (75% pay tax)
$274,827,384.00	$8,244,821.52	$12,367,232.28
$254,491,224.00	$7,634,736.72	$11,452,105.08
$359,578,648.00	$10,787,359.44	$16,181,039.16
$349,151,712.00	$10,474,551.36	$15,711,827.04
$386,667,424.00	$11,600,022.72	$17,400,034.08
$335,441,340.00	$10,063,240.20	$15,094,860.30
$395,209,880.00	$11,856,296.40	$17,784,444.60
$397,330,437.03	$11,919,913.11	$17,879,869.67
$394,306,380.00	$11,829,191.40	$17,743,787.10

Graves Garrett LLC

Based on these figures, Missouri businesses must also decide whether to pass along any increase in wage costs (wages and mandatory payments).[4]

Year of final prescribed wage increase	Annual Cost to Business from Increased Wage	Annual Decreased Corporate Income Tax if cost is fully absorbed	Annual Decreased Corporate Income Tax if cost is 50% absorbed
2021 ($11)	$412,266,214.62	$25,766,638.41	$12,883,319.21
2022 ($11)	$368,599,008.34	$23,037,438.02	$11,518,719.01
2022 ($12)	$642,388,413.94	$40,149,275.87	$20,074,637.94
2023 ($12)	$592,432,863.05	$37,027,053.94	$18,513,526.97
2023 ($13)	$885,607,785.92	$55,350,486.62	$27,675,243.31
2024 ($12)	$543,831,587.91	$33,989,474.24	$16,994,737.12
2024 ($13)	$833,981,235.80	$52,123,827.23	$26,061,913.62
2025 ($13)	$782,346,397.64	$48,896,649.85	$24,448,324.93
2026 ($13)	$731,150,265.50	$45,696,891.59	$22,848,445.80

Assuming businesses absorb half of the cost of increased wages, and 75 percent of affected workers pay the new, higher taxes, the effect on state income tax collections is estimated to be:

Year of final prescribed wage increase	Annual Net Income Tax Revenue Loss
2021 ($11)	($516,086.93)
2022 ($11)	($66,613.93)
2022 ($12)	($3,893,598.78)
2023 ($12)	($2,801,699.93)
2023 ($13)	($10,275,209.23)
2024 ($12)	($1,899,876.82)
2024 ($13)	($8,277,469.02)
2025 ($13)	($6,568,455.26)
2026 ($13)	($5,104,658.70)

[4] A healthcare benefit cost estimate is not available based on the time limitations imposed by this fiscal note.

Graves Garrett LLC

4. Sales tax revenue gain or loss

Projecting any increase in sales tax revenue resulting from an increased minimum wage would require the auditor's office to conclude, based on data separate and apart from the sheer conjecture typically offered by political activist groups: (1) the net effect on consumer disposable income and (2) the percentage of a consumer's disposable income that is spent on goods subject to the sales tax, taking into consideration that the scope of Missouri's sales tax has been truncated by a voter-approved constitutional amendment from November 2016.

Typically, the Auditor's office multiplies the total increase in worker earnings (which should be adjusted for employment reductions) and multiplies the result by 25 percent, then multiplying that figure by the Missouri the population weighted combined average state and local sales tax in Missouri, 7.81%.[5] Based on this estimate, the population-weighted combined average local sales tax is 3.585%.

However, it would be deceptive to fail to account for sales tax losses from workers whose wages are eliminated or sales tax losses from reduced business profits (attributable to the higher wages paid), which will lower spending by business owners. The first figure is calculable by determining the total annual wages (adjusted for employment deductions) for all workers who lose jobs due to a minimum wage hike, multiplied by 25 percent. The second number is calculable by multiplying the total increase in worker earnings (multiplied by 1.0765 to account for Social Security and Medicare taxes) by approximately 15 percent.[6]

Year of final prescribed wage increase	Annual Net Increase in Wages Paid To Workers	New Wages Spent on Sales Tax Items	Annual Cost to Business from Increased Wage	Annual Business Income No Longer Included in Sales Tax Base (50% passed-through)
2021 ($11)	$274,827,384	$68,706,846	$412,266,214.62	($61,839,932)
2022 ($11)	$254,491,224	$63,622,806	$368,599,008.34	($55,289,851)
2022 ($12)	$359,578,648	$89,894,662	$642,388,413.94	($96,358,262)
2023 ($12)	$349,151,712	$87,287,928	$592,432,863.05	($88,864,929)

[5] http://taxfoundation.org/sites/taxfoundation.org/files/docs/LOST--2015.png.
[6] This estimate would also need to be adjusted to reflect certain employers' mandate under the Affordable Care Act to provide healthcare coverage and pay 60 percent of such coverage.

2023 ($13)	$386,667,424	$96,666,856	$885,607,785.92	($132,841,168)
2024 ($12)	$335,441,340	$83,860,335	$543,831,587.91	($81,574,738)
2024 ($13)	$395,209,880	$98,802,470	$833,981,235.75	($125,097,185)
2025 ($13)	$397,330,437	$99,332,609	$782,346,397.64	($117,351,960)
2026 ($13)	$394,306,380	$98,576,595	$731,150,265.51	($109,672,540)

Accordingly, the annual estimations of the effects on state and local revenue, and total state economic impact are as follows:

Year of final prescribed wage increase	Annual Net Income Tax Revenue Loss	Annual Net Effect on State Sales Tax	Total Annual Effect on State Tax Revenue	Total Net Loss to State Government from Taxes and Unemployment Insurance	Annual Net Effect on Local Sales Tax
2021 ($11)	($516,086.93)	$290,127.11	($225,959.82)	($17,646,028.59)	$246,178.86
2022 ($11)	($66,613.93)	$352,067.34	$285,453.41	($10,960,559.78)	$298,736.43
2022 ($12)	($3,893,598.78)	($273,087.10)	($4,166,685.88)	($27,127,603.19)	($231,720.06)
2023 ($12)	($2,801,699.93)	($66,628.31)	($2,868,328.24)	($23,205,232.64)	($56,535.50)
2023 ($13)	($10,275,209.23)	($1,528,364.68)	($11,803,573.91)	($40,437,134.18)	($1,296,849.08)
2024 ($12)	($1,899,876.82)	$96,566.47	($1,803,310.36)	($13,770,610.81)	$81,938.65
2024 ($13)	($8,277,469.02)	($1,110,951.72)	($9,388,420.74)	($30,890,662.52)	($942,665.55)
2025 ($13)	($6,136,139.31)	($761,317.55)	($6,897,456.87)	($23,480,843.55)	($645,993.71)
2026 ($13)	($5,104,658.70)	($468,803.67)	($5,573,462.37)	($18,598,808.26)	($397,789.62)

5. Damage to small business

Additionally, any proponent or opponent fiscal note submission is required, pursuant to Missouri law, to state the impact of the initiative on small businesses. According to analysis by the Employment Policies Institute, 40 percent of the minimum wage workforce is employed at businesses with fewer than 50 employees. [7] The impact on extra costs to small business may be more significant than even this 40% figure suggests. Small businesses are more easily shut down by input price increases than large businesses, which have greater access to capital to weather the

[7] https://www.epionline.org/oped/who-really-employs-minimum-wage-workers/

storm. Clearly, small businesses that do not shut down due to increases in the minimum wage will pay higher costs, estimated at about 40% of business' total increased costs, described above.

Conclusion

In conclusion, the State Auditor should attempt to quantify the increased cost to be borne by state and local government entities through increased contracting costs as a result of an increase to the minimum wage. This direct cost is outlined in Section 1.

Indirect costs are outlined in Sections 2 through 5, and show a net loss. Although such second-order effects more difficult to predict, a net loss is easily the most likely outcome. Significantly, this result is only obtainable if the Auditor reviews both the "credit" and "debit" sides of the transfer of wealth from businesses to workers. The Auditor should refrain from taking the proponents' likely invitation to consider and present only the "credit," side, and should attempt to provide a complete picture of all effects of a minimum wage increase, including the loss of revenue to state and local governments from individuals who lose employment. Only conveying (or quantifying) the potential for gain, without fairly conveying the likelihood of net loss, would be deceptive and unfair.

The State Auditor's previous 2018 fiscal notes are a good model. Each of the fiscal notes for the Initiative Petitions should follow the already-established format and state that:

> "[O]perating costs could increase by an unknown annual amount that could be significant. State and local government tax revenue could change by an unknown annual amount ranging from a $## million decrease to a $## million increase depending on business decisions."

Should you desire further detail or have any questions about this fiscal impact statement, please do not hesitate to contact me.

Sincerely,

Edward D. Greim

ABOUT THE MISSOURI RESTAURANT ASSOCIATION

With origins dating back to 1916, the Missouri Restaurant Association (MRA) is a statewide trade association representing over 1,500 member establishments. The association's membership is diverse, and includes full service, fast casual, and quick service restaurants, cafeterias, hotels, schools, institutions, contract feeders, and ancillary foodservice providers such as theme parks. The association has been successful in securing support from virtually every segment of the foodservice and hospitality industry.

MRA includes seven chapters as extensions of the parent organization, each with its own Officers, Board of Directors, and limited budget. The association is governed by a Board of Directors comprised of five Officers, 33 Directors, and each President of the seven affiliated chapters.

MRA is dedicated to serving the needs of the foodservice and hospitality industry, enhancing and improving its growth and development, assisting and educating its members in operating more effectively, improving the political and social environment in which the industry conducts business, for the benefit of its members, patrons, employees, and the well-being of the community.

David A. Macpherson is the E.M. Stevens Professor of Economics at Trinity University. He received undergraduate and doctoral degrees in economics from Pennsylvania State University.

Dr. Macpherson has published over 60 articles in leading economics and real estate journals including Review of Economics and Statistics, Industrial and Labor Relations Review, Journal of Labor Economics, Journal of Human Resources, and Journal of Real Estate Economics and Finance. His research has been funded by a variety of entities including the National Science Foundation, Florida Legislature, and the National Association of Realtors. He is co-author of the undergraduate labor economics text, Contemporary Labor Economics, as well as the principles of economics text, Economics: Private and Public Choice. He is included in Who's Who in Economics, Fourth Edition, which includes the 1,200 most frequently cited economists.

THE IMPACT OF A $10.10 MINIMUM WAGE ON JOBS AND TAXPAYER COSTS IN MISSOURI

June 2014

Economic Analysis by **Dr. David Macpherson**
Trinity University

Index

Executive Summary 4
Results 5
Technical Appendix 7

EXECUTIVE SUMMARY

Missouri's minimum wage of $7.50 is linked to rise in most years with the inflation rate. But some state legislators and labor unions would like to raise that figure even higher. For instance, a recent labor union-organized bus tour in the state promoted a $10.10 minimum wage in St. Louis.

Proponents have enthusiastically pointed to the benefits of the $10.10 policy. But there's been far less discussion of the costs involved with a $10.10-an-hour minimum wage—both the cost on employment, and the cost to taxpayers.

In this study, labor economist David Macpherson of Trinity University uses Census Bureau data to estimate the impact on Missouri's labor market and budget from raising the minimum wage to $10.10 an hour. He also provides separate results for the St. Louis metropolitan area.

Dr. Macpherson's employment estimates follow the methodology used by the nonpartisan Congressional Budget Office in its report earlier this year estimating the impact of a $10.10 minimum wage nationwide, which in turn relied on 60 different empirical studies to formulate its estimates.

Statewide, he finds that over 15,000 jobs would be lost at the $10.10 wage level—with 9,300 of those jobs being held by women. In the St. Louis metropolitan area, approximately 4,800 jobs would be lost from a $10.10 minimum wage.

The cost to taxpayers would be significant: There are approximately 40,000 state and local employees whose wages would be affected by the $10.10 increase in Missouri, for a combined cost to taxpayers of $87 million annually.

Raising wages is an admirable goal, but the evidence suggests that accomplishing this goal with a blunt wage mandate could do more harm than good.

RESULTS

The minimum wage is one of the most hotly-debated topics in the political world. Some legislators claim that a higher base wage will stimulate the economy; others claim that it will reduce jobs when affected employers can't offset the higher costs through higher prices.

Economists, who have studied the issue since the late 1940s, tend to take a skeptical view of minimum wage increases. Since the early 1990s, for instance, roughly 85 percent of the most credible research on the minimum wage points to job loss for less-skilled groups. The nonpartisan Congressional Budget Office (CBO), in an evaluation of President Obama's proposed $10.10 minimum wage increase, reviewed 60 different studies and concluded that the policy would eliminate 500,000 jobs if enacted.

The estimates that follow, of the employment impact of a higher minimum wage on Missouri's labor market, were performed by Dr. David Macpherson of Trinity University. Dr. Macpherson followed closely the methodology used by the CBO in its 2014 report. Dr. Macpherson also estimates the taxpayer costs of a higher minimum wage, as many state and local public employees will see their earnings increase when the minimum wage rises.

Dr. Macpherson's methodology is presented in detail in a technical appendix.

Estimated Employment Effects of a $10.10 Minimum Wage in Missouri

Statewide, Dr. Macpherson finds that increasing the minimum wage to $10.10 would eliminate over 15,000 jobs—approximately 60 percent of which are jobs held by women. The bulk of the job losses would be concentrated among individuals with a high school degree or less, and among people who work in the retail or leisure & hospitality industries.

City-Specific Minimum Wage Employment Impacts

The city of St. Louis has been the subject of a number of protests calling for a higher minimum wage. Dr. Macpherson analyzed the employment impact of a $10.10 minimum wage in the St. Louis metropolitan area, providing breakouts by gender and education where the data permits. He estimates that the wage hike would eliminate approximately 5,000 jobs—just over half of which would be jobs held by women.

Impact on St. Louis Metro Area of a $10.10 Minimum Wage

RESULTS CONTINUED

Missouri Taxpayer Costs of a $10.10 Minimum Wage

Dr. Macpherson estimates that approximately forty thousand state & local public employees would be affected by a minimum wage increase to $10.10 an hour. These additional wage costs translate to new costs for state and local taxpayers. Following the methodology described in detail in the technical appendix, Dr. Macpherson estimates both the straight wage cost of a $10.10 minimum wage, as well as the total compensation cost with Social Security, Medicare, workers compensation, and unemployment insurance included. Statewide, taxpayers would shoulder an additional $87 million in costs if the base wage was increased to $10.10 an hour and public employees were covered by the new wage.

Missouri Taxpayer Costs of a $10.10 Minimum Wage	
# of State & Local Workers	304,588
# Affected By $10.10 MW	40,103
Annual Wage Cost	$79,629,374
Annual Compensation Cost	$87,004,355

Note: Annual compensation costs include the cost of worker's compensation, FICA, and unemployment insurance benefits.

TECHNICAL APPENDIX

Estimating Employment Loss and the Cost to State and Local Government of an Increase in the Minimum Wage

Dr. David Macpherson
E.M. Stevens Professor of Economics
Trinity University

This paper describes how we estimate the employment loss and the cost to state and local governments of a proposed increase in the minimum wage effective on January 1, 2015.

Data and Sample

First, we use data from the Current Population Survey (CPS) Outgoing Rotation Groups (ORG) from January 2011 through December 2013. For each worker in the sample, we calculate their wage rate. We also adjust the wage rate to reflect a forecast of wages in 2015. This is done in two steps. First, based on legislation enacted as of April 2014, we estimate the minimum wage that would be in effect in January 2015 for each state and city that we consider. If a state or city has an indexed minimum wage, we increase the January 2014 state or city minimum wage by the Congressional Budget Office (CBO) inflation forecast for 2014 of 1.7%.

Since we use data from 2011 through 2013, we also follow the CBO approach for forecasting what the wage distribution would be in 2015. This is done in two steps. First, we adjust wages observed prior to 2013 to reflect 2013 minimum wage legislation. For example, if the minimum wage in a state was $7.25 in 2011 and grew to $8.00 by 2013, anyone who earned between $7.25 and $8.00 in 2011 would have their wage increased to $8.00. After wages are adjusted to 2013 levels, we assume that all wages grow by 2.9% in 2014. Using the resulting 2015 distribution of wages, we adjust for minimum wage legislation that would increase the minimum between 2013 and 2015. Anyone earning a wage between the 2013 and 2015 minimum wage is assigned a wage matching the 2015 minimum wage.

After generating the forecast 2015 distribution of wages reflecting wage growth and existing minimum wage legislation, we identify workers who would be affected by additional changes to the 2015 minimum wage as those with wages between the predicted minimum wage legislated for 2015 (or up to $.25 below it) and the proposed minimum.

To estimate the number of affected workers, we take two steps. First, for each state, we estimate the number of affected workers for 2013. Second, we adjust the weights in the 2011 and 2012 data so that the state-specific number of affected workers implied by the 2011 and 2012 data matches that for 2013. This adjustment is designed to correct for the changing economic climate as the economy recovers from the great recession and to generate estimates that are as close as possible to the most recent data (2013). After we adjust the 2011 and 2012 weights, we estimate the number of affected workers by summing their earnings weights and dividing the total by 36 (the number of months of data).

[1] Also, following CBO, anyone earning up to $.25 less than the 2011 minimum wage would have their wage increased by the amount that the minimum wage increased (i.e. a $7.00 wage would be increased to $7.75 in this example). This approach is used to adjust for the fact that many workers round their answers when asked about their wage.

TECHINCAL APPENDIX CONTINUED

Employment Loss

To estimate employment loss, for each affected worker we compute:

L = e *(Proposed Min Wage /Min Wage 2015 – 1)

where e is an assumed elasticity of employment with respect to changes in the minimum wage, Min Wage 2015 is the minimum wage currently legislated for 2015, and Proposed Min Wage is the minimum wage that is being proposed for 2015. Thus, for example, if a worker is projected to earn the federal minimum of $7.25 in 2015, the expected reduction in employment resulting from a $10.10 minimum wage in 2015 if e=.45 is .45*(10.10/7.25 – 1) = .18. That is, for every 100 workers currently earning the federal minimum, the expectation is that 18 would lose a job if the minimum wage elasticity is .45.

To estimate the aggregate employment loss in the economy, we use earnings weights to sum L across workers. We also follow the Congressional Budget Office (2014) and use an elasticity of 0.15 for non-teenagers and 0.45 for teenagers.

Cost to State and Local Government

We use the same data to estimate the cost to state and local government of a proposed minimum wage hike. We apply the same definition of affected workers described above and estimate the number of state and local government workers affected by a minimum wage hike. We do not, however, assume that there is any job loss for state and local workers as we do not have an appropriate elasticity estimate specific to state and local workers. To the extent that state or local governments reduce hours or employment in response tothe minimum wage hike, our estimate of the cost of the hike would be overstated.

To estimate the increase in annual payroll cost resulting from an increase in the minimum wage, we estimate the increase in annual cost for each worker as:

(Proposed Min Wage-Min Wage 2015)*weekly hours*52

We then multiply the increase in annual cost by the earnings weight for each worker and sum across workers. Since an increase in wages also requires increased employer contributions for Social Security, Medicare, workers' compensation and unemployment insurance, we apply an estimate of the payroll tax rate for these mandatory programs to calculate the additional cost for these programs.

For each state and city considered, we provide tables summarizing the number of affected workers, employment loss, and the distribution of employment loss by sex, education, race, age and industry. Given that we use three years of data, a rule of thumb for minimum sample size required to achieve a reasonably accurate estimate of the employment loss is to require at least 30,000 people be in the relevant category. For example, if there are fewer than 30,000 people projected to be in a particular industry category, the Bureau of Labor Statistics would not report the estimate due to a lack of reliability based on the variance of the estimate relative to its mean.

In addition to the estimate of employment loss, for each state or city considered, we estimate the number of state and local workers that would be affected by the minimum wage hike and the total annual cost to government in terms of wages and total compensation. As with the employment estimates, we advise caution in interpreting estimates that are based on fewer than 30,000 affected workers.

[3] Congressional Budget Office, "The Effects of a Minimum-Wage Increase on Employment and Family Income," February 2014.

[4] For workers paid by the hour the reported hourly wage was used. For workers who are not paid by the hour, we calculate the hourly wage by dividing usual weekly earnings by usual weekly hours. Overtime pay was calculated as time and one-half for hours above 40 hours for hourly workers.

[5] The assumed payroll tax for Medicare and Social Security is 7.65 percent. To estimate the payroll tax for workers' compensation and unemployment insurance, we use unpublished data from the 2010 Employer Cost of Employee Compensation database for state and local workers in the relevant region in 2010.

FISCAL ANALYSIS
OF
PROPOSED STATUTORY INITIATIVE PETITIONS 2012-084 AND 2012-085

Prepared for

Victor Allred versus Robin Carnahan and Thomas Schweich
Circuit Court of Cole County, Missouri

FISCAL ANALYSIS
OF
PROPOSED STATUTORY INITIATIVE PETITIONS 2012-084 AND 2012-085

I. Introduction

This report was undertaken at the request of counsel representing plaintiffs in the case of Victor Allred versus Robin Carnahan and Thomas Schweich. As part of the basis of the lawsuit, the plaintiffs allege that the fiscal note summaries for proposed statutory initiative petitions 2012-084 and 2012-085 are insufficient and unfair. I was asked by counsel to evaluate the fiscal impact of proposed statutory initiative petitions 2012-084 and 2012-085.

The results of my analysis indicate:

(1) labor costs to state and local government entities, based on state auditor fiscal notes, will rise by more than $1,352,182. A more inclusive estimate indicates that state and local government labor costs will increase by $16,003,712;

(2) unemployment benefit costs will rise by $4,397,510 during the first year of the minimum wage increase;

(3) individual income tax revenue will rise by at most $4,078,088;

(4) the loss in corporate income tax revenue could be as high as $9,243,105;

(5) state and local sales tax revenue will rise by at most $2,919,327;

(6) during the first year: state and local governments will incur increased costs of $20,401,222; the change in state and local government revenue will

range from -$2,245,690 to +$6,997,415; and the net state and local government fiscal impact will range from -$22,646,912 to -$13,403,807.

The report is organized as follows. My qualifications to prepare this report are contained in Section II. Section III describes the data and records I relied upon for this report. Section IV reviews the estimated fiscal impact of proposed statutory initiative petitions 2012-084 and 2012-085. A summary and my conclusions are provided in Section VI.

II. Qualifications

I am currently the E.M. Stevens Professor of Economics at Trinity University in San Antonio, Texas. Previously, I was employed by Florida State University as Director of the Pepper Institute on Aging and Public Policy and the Rod and Hope Brim Eminent Scholar in Economics. I have taught both undergraduate and graduate Econometrics (statistical analysis of economic data), and Labor Economics. I have published over 50 articles in peer-reviewed professional journals.

I am currently serving on the editorial board of the *Journal of Forensic Economics*, which is a peer-reviewed journal. I have also served as a reviewer or 'referee' for 24 peer-reviewed journals, including the *Journal of Human Resources, Journal of Labor Economics, Quarterly Journal of Economics,* and the *Review of Economics and Statistics*. Based upon these experiences, I am very familiar with the scholarly and professional research process and the concept of peer review.

I have prepared numerous analyses and reports that use statistical methods as applied to specific questions. I have been responsible for developing the techniques and approaches required for these analyses. I routinely use computers and statistical software packages to assist me in my analytical work. I have been qualified as an expert witness on statistical analysis of employment discrimination and economic damages in state courts in Florida and Georgia and Federal Courts, and I have given expert testimony. I have prepared analyses and offered testimony on behalf of both plaintiffs and defendants.

Details of my qualifications are reflected in my current resume and legal cases, attached as Appendix A to the report.

III. Data and Records

I reviewed the following materials in preparing this report.

- Plaintiff's Complaint
- Material cited in footnotes below.

IV. Fiscal Impact

A. Overview

The proposed statutory initiative petitions 2012-084 and 2012-085 contain many elements in common. Both initiatives would increase the Missouri minimum wage to $8.25 per hour, alter the exemption for retail and service firms, raise the cash wage of tipped workers from 50% to 60% of the minimum wage, and increase the statute of limitation from two to three year for underpayment claims.

The initiatives differ in their linkage to the federal minimum wage. Initiative petition 2012-084 requires that the state minimum wage be automatically increased to the

federal minimum wage if it is higher than the state minimum wage. Initiative petition 2012-085 does not have such a linkage. It only requires that workers be paid the higher of the state minimum wage or the federal minimum wage. The linkage to the federal minimum wage will cause the state minimum wage to be higher under initiative petition 2012-084 over time. This is because the state minimum wage, in contrast to the federal minimum wage, is adjusted for inflation as measured by the Consumer Price Index.

An increase in the minimum wage in Missouri will affect state and local government entities in two ways. First, it will directly increase the cost of labor to state and local government entities. This will occur due to the increase in wages of state and local government workers earning between the existing minimum wage of $7.25 and the new minimum wage of $8.25.[1] In addition, workers laid off due to the minimum wage increase can collect unemployment benefits. The state government will bear the cost of unemployment benefits of these workers for the first 20 weeks. Second, state and local government may gain increased revenue through higher income tax and sales taxes paid by workers affected by the minimum wage who remain employed. However, state and local government will suffer reduced tax revenue to the extent the higher wage cost lowers profits of businesses.

The following sections estimate the cost and revenue effects to state and local government entities of the proposed minimum wage increase.

[1] Information about the minimum wage in Missouri is available at http://www.labor.mo.gov/DLS/minimumwage/.

B. Direct Labor Cost Impact on State and Local Government Budgets

There are two possible ways to measure the direct labor cost on state and local government budgets. First, one can use the information included in the fiscal notes prepared by the State Auditor regarding the proposed initiatives. It is important to note that the fiscal notes provide an incomplete and thus too low estimate of the direct labor cost. The fiscal notes indicate that the Office of Administration's (OA) Division of Personnel reported that as of September 2011 there were 834 state workers who would be affected by an increase of the minimum wage to $8.25 and the "approximate annual cost" would be more than $540,000.

This OA estimate excludes seasonal workers such as State Fair employees, State Parks Employees, and tax season staff. The Division of Revenue noted its labor cost would rise by $40,000. The Division of Natural Resources stated they have over 500 workers who would be affected by the increase, but did not provide an estimate of the cost. The State Fair hired 745 workers that would be affected, but no cost estimate was provided.

Thus, the cost to state government, based on the fiscal notes, would be more than $580,000.

The fiscal notes also provide an incomplete and thus too low measure of the cost to local government and public educational institutions. Many cities and educational institutions did not respond to Office of Auditor's survey or provide an estimate of the cost of the higher minimum wage. The City of Columbia, City of Jefferson, City of

Joseph, Linn State Technical College, and Metropolitan Community College did provide such an estimate. The total cost to these five institutions is $772,182.

Based on the fiscal notes, the cost to state and local government entities of the increase in the minimum wage to $8.25 will be more than $1,352,182.

Second, data from the U.S. Census Bureau's Current Population Survey (CPS) can also be used to calculate the cost of the increased labor cost to state and local government entities in Missouri. Using the data from January 2010 to December 2011 Outgoing Rotation Group (ORG) CPS, I calculated that 17,089 state and local government workers would be affected by the minimum wage increase. I defined affected workers as those individuals earning between $7.00 and $8.24 per hour. Though the minimum wage was $7.25 per hour during this period, I also included those workers reporting earnings of $7.00 to $7.24 since some individuals may round their wage rate. I calculated the annual wage cost for each state and local government worker (i) in the ORG CPS as:

$$Annual\ Wage\ Cost_i = (\$8.25 - current\ wage_i) * weekly\ hours_i * 52.$$[2]

The average annual wage cost increase was $870. I summed the cost over each worker (i) to obtain the total wage cost to state and local government entities in Missouri of $14,866,430.

The increased wage cost is not the only labor cost to state and local government entities of the minimum wage increase. Employers are required to pay 7.65% of their wage costs in Social Security and Medicare taxes. Thus, the total labor cost of the minimum wage increase will be 1.0765 times $14,866,430 or $16,003,712.

---

[2] I assume that persons reporting an hourly wage rate between $7.00 and $7.24 are actually earning $7.25 per hour.

C. Unemployment Benefit Impact

The higher minimum wage will cause firms to reduce their level of employment.[3] As a result, the number of unemployed workers will increase. Thus, another important fiscal cost of the minimum wage increase is the cost of the unemployment insurance benefits for the workers laid off as a result of the minimum wage increase.

To calculate the cost to the unemployment benefits program, I first calculated the number of workers laid off. To do so, I calculated a probability of job loss for each affected Missouri worker (i) in the January 2010 to December 2011 ORG CPS:

$$Probability\ Job\ Loss_{\ i} = \frac{(\$8.25 - Current\ Wage_i)}{Current\ Wage_i} * elasticity_i.$$

I used the preferred employment elasticity (i.e., sensitivity of employment to wage changes) contained in Sabia and Burkhauser (2010), which was -0.6 for individuals aged 16 to 29 without a high school degree and -0.2 for all other individuals. The sole exception was for state and local government workers, where I assumed an elasticity of zero.[4] The sum across all affected workers yielded an estimated job loss of 5,745 jobs.

The next step was to calculate the weekly benefit for the average unemployed worker. Using the benefits calculator on the Missouri unemployment benefits web site and the wage income of average private-sector affected worker ($10,937), yields an average weekly benefit of $109.36[5]. The state of Missouri pays the first 20 weeks of benefits.[6] Thus, each eligible unemployed worker could receive a total of $2,187.20 in

---

[3] For a survey of research regarding the effect of the minimum wage on employment, see David Neumark and William L. Wascher, *Minimum Wages* (Cambridge, MA: MIT Press, 2008).
[4] Joseph J. Sabia and Richard V. Burkhauser, "Minimum Wages and Poverty: Will a $9.50 Federal Minimum Wage Really Help the Working Poor?" *Southern Economic Journal* (January 2010): 592-623.
[5] http://www.labor.mo.gov/DES/Claims/calculator.asp
[6] See http://www.labor.mo.gov/DES/Claims/

benefits paid for by the state of Missouri. These jobs are permanently eliminated and so it is appropriate to calculate the full amount of benefits for each worker.

Unemployment insurance, however, does not cover all unemployed workers. For example, it does not cover people who leave a job voluntarily, people looking for their first job, and re-entrants who previously left the labor force voluntarily. Furthermore, some individuals don't apply for benefits even though they are eligible. I assume that 35% of the unemployed workers will receive unemployment benefits based on analysis by Wenger (2001).[7]

The last step is to calculate the total cost to the Missouri unemployment benefits program. This done by multiplying the number of jobs lost (5,745) times the average benefit amount ($2,187.20) times the percent of unemployed individuals collecting benefits (35%). This calculation yields a figure of $4,397,510. This cost would be borne only during the first year of the minimum wage increase. The inflation adjustments in the minimum wage will also yield costs to the unemployment insurance program, but it is not possible to estimate the amount.

D. Impact on State Income Tax Revenue

The state of Missouri will gain increased revenue through higher income tax taxes paid by workers affected by the minimum wage who remain employed. However, it will

[7] Jeffery Wenger. "Divided We Fall: Deserving Workers Slip through America's Patchwork Unemployment Insurance System." *Economic Policy Institute*, 2001. Sabia and Burkhauser (2010) make the same assumption in their calculation of the amount of unemployment benefits generated by a minimum wage increase.

suffer reduced corporate income tax revenue to the extent the higher wage cost lowers profits of businesses.

To calculate the impact on individual income tax revenue, I again used data from January 2010 to December 2011 ORG CPS. I defined affected workers as those Missouri individuals earning between $7.00 and $8.24 per hour.[8] I used the following formula to estimate the change in income tax revenue:

$$\Delta Tax\ Revenue_i = (Tax_After_i - Tax_Before_i) - Prob_Job_Loss_i * Tax_Before_i,$$

where Tax_After_i is the income tax paid by worker i after the minimum wage increase. Tax_Before_i is the income tax paid by worker i after the minimum wage increase, and $Prob_Job_Loss_i$ is the probability of job loss for worker i. The first term shows the change in individual income tax revenue assuming no job loss and the second term shows the loss in tax revenue due to the employment loss caused by the minimum wage increase.

The income tax calculations were based on two assumptions.[9] First, the 50% percent of affected workers who were under the age 25 who were assumed to be dependents on another person's tax return. As a result, it was assumed that the affected workers' earnings were taxable at the maximum Missouri income tax rate of 6% both and after the minimum wage increase.[10] Second, all persons age 25 and older were assumed to be paying little or no income tax after exemptions and deductions. Thus, about 50% of the earnings increase will be taxed at a rate of 6%.

---

[8] I again assume that persons reporting an hourly wage rate between $7.00 and $7.24 are actually earning $7.25 per hour. The annual earnings level was calculated as the worker's wage rate times usual weekly hours worked times 52.

[9] The same assumptions are used in the State Auditor's fiscal notes for the initiatives.

[10] This assumption will overstate the revenue increase as 20% of affected workers under the age 25 are living by themselves and some of these individuals will not be a dependent on another person's tax return.

The tax calculations reveal an increase in income tax revenue increase to the state. Assuming no workers were laid off by the minimum wage increase, income tax revenue would rise by $6,043,534. However, the state will lose $1,965,446 in income tax revenue due to the lost earnings of private-sector workers no longer employed due to the minimum wage hike.[11] Thus, the net increase in individual income tax revenue is $4,078,088.

Businesses have three options to respond to the higher labor costs of a higher minimum wage. They can reduce their profits, raise prices, or lay off workers. Based on the 2010-2011 ORG CPS data, the minimum wage increase will raise private-sector labor costs by $192,620,900 if employment levels are not reduced. However, labor costs will be lowered by $55,240,790 due to the reduction in employment. Thus, labor costs will, on net, rise by $137,380,110. These increased labor costs may be either passed on to consumers through higher prices or reduced profits or more likely some combination of higher prices and reduced profits. Assuming that businesses absorbed all of the higher costs through reduced profits, the corporate income tax revenue would fall by the Missouri corporate income tax of 6.25% times the rise in labor costs of $137,380,110 * 1.0765 (to account for employer-paid Social Security and Medicare taxes) or $9,243,106.[12] Alternatively, if half of the higher labor costs were passed on to consumers, then corporate income tax revenue would fall by $4,621,553.

[11] The probability of job loss was calculated in the same manner as in the prior section.
[12] The corporate income tax for Missouri is available at: http://dor.mo.gov/business/corporate/

E. Impact on State and Local Sales Tax Revenue

To calculate the impact on state and local sales tax revenue the following approach was undertaken.[13] First, the total increase in worker earnings, adjusted for employment reductions, was calculated using the 2010-2011 ORG CPS. This figure was $152,246,540. Second, the increase in Missouri taxable sales was calculated as 25% of the earnings increase or $38,061,635. Third, the increase in sales tax revenue was calculated by multiplying the taxable sales change times the average state and local rate of 7.67% or $2,919,327.[14]

The higher minimum wage may decrease sales tax revenue to the extent that it reduces business profits, which will lower spending by business owners.

VI. Summary and Conclusions

I was asked by counsel to evaluate the fiscal impact of proposed statutory initiative petitions 2012-084 and 2012-085.

The results of my analysis indicate:

(1) labor costs to state and local government entities, based on state auditor fiscal notes, will rise by more than $1,352,182. A more inclusive estimate indicates that state and local government labor costs will increase by $16,003,712;

[13] The same general approach is used in the State Auditor's fiscal notes for the initiatives.
[14] The average rate comes from http://taxfoundation.org/news/show/27023.html

(2) unemployment benefit costs will rise by $4,397,510 during the first year of the minimum wage increase;

(3) individual income tax revenue will rise by at most $4,078,088;

(4) the loss in corporate income tax revenue could be as high as $9,243,105;

(5) state and local sales tax revenue will rise by at most $2,919,327;

(6) during the first year: state and local governments will incur increased costs of $20,401,222; the change in state and local government revenue will range from -$2,245,690 to +$6,997,415; and the net state and local government fiscal impact will range from -$22,646,912 to -$13,403,807.

"Gender-Related Differences in Pension Coverage," with William Even, in *Women and Work: A Handbook*, Garland Publishing, New York, NY, 1996.

"The Pension Coverage of Young and Mature Workers", with William Even, in *Pension Coverage Issues for the '90s*, eds. Richard Hinz, John Turner, and Phyllis Fernandez, U.S. Government Printing Office, Washington, D.C, 1994.

Working Papers (Economics)

"Deferred Compensation vs. Efficiency Wages: An Experimental Test of Effort Provision and
Self-Selection," with Tim Salmon and Kislaya Prasad, under review, *Journal of Business and Economic Organization*

"What Do Unions Do to Pension Performance?" with William Even, September 2011, under revision

"Teacher Salaries, State Collective Bargaining Laws, and Union Coverage" March 2011, with Barry Hirsch and John Winters.

"The Effects of the 2007-2009 Federal Minimum Wage Increases on Teen Employment," with William Even, under revision, July 2010.

"Participant Direction in Defined Contribution Plans," April 2006, with William Even, under revision.

"Do Pensions Impede Phased Retirement?" September 2004, with William Even, under revision.

Working Papers (Real Estate and Insurance)

"An Empirical Analysis of Socio-Demographic Factors and the Mispricing of Homeowners Insurance in Florida," under review *Journal of Financial Services Research*, with Ronald Cheung, Charles Nyce, Kathleen McCullough, and Cassandra Cole.

"The Impact of No-Fault Legislation on Automobile Insurance Premiums," revised and resubmitted to *North American Actuarial Journal*, with Cassandra Cole, Kevin Eastman, Patrick Maroney, and Kathleen McCullough.

Funded Projects

Employment Policies Institute, 5/2010-7/2010, $16,500 (Trinity University portion), "Employment Effects of the 2007-2009 Federal Minimum Wage Increases," with William Even.

National Science Foundation, 9/2009-8/2012, $125,866 (Trinity University portion), "Incentives in the Workplace: An Experimental Examination of How Wage Differences Across Time and Among Peers Affect Productivity and Self-Selection," with Tim Salmon, Kislaya Prasad, and Hyejin Ku.

Florida Legislature, 10/2007-6/2009, $175,000, "Child Support Guidelines," with Stefan Norrbin and Thomas McCaleb.

Florida Legislature (through University of Florida), 12/2006-9/2007, $223,000, "Analysis of Save our Homes Amendment," with Dean Gatzlaff.

U.S. Administration on Aging (through University of South Florida), 5/2005-9/2007, $175,000, "Employment in the Long-Term Care Industry: The Importance of Recruitment and Retention," with William Even.

Florida Legislature, 2/2003-8/2004, $175,000, "Child Support Guidelines," with Stefan Norrbin and Thomas McCaleb.

Florida Department of Environmental Protection, 6/2002-2/2003, $94,157, "Affordability Index," with Stefan Norrbin and William Serow.

University of South Carolina, 4/2000-11/2000, $10,000, "Minority Homeownership in South Carolina," with Stacy Sirmans.

Florida Department of Business and Professional Regulation, 3/1999-6/1999, $21,739, "Forecasting Housing Demand in Florida," with Stacy Sirmans.

University of South Carolina, 4/1999-11/1999, $10,000, "Forecasting Housing Demand in South Carolina," with Stacy Sirmans.

Florida State University, 6/1999-8/1999, $7,500, "Support for Preparing ECO 2000 as a Web-Based Course."

TIAA-CREF, 8/1998-8/1999, $23,000, "Determinants of Savings in Supplemental Pension Plans: A Case Study of Pension Choices in Higher Education," with Melissa Hardy and Larry Hazelrigg.

Florida Department of Business and Professional Regulation, 4/1998-6/1998, $16,638, "Forecasting Seniors' Demand for Housing in Florida," with Stacy Sirmans.

Florida Department of Business and Professional Regulation, 12/1997-6/1998, $18,472, "Housing Price Appreciation in Orlando and Tampa," with Stacy Sirmans.

Florida State University, 6/1998-8/1998, $7,500, "Support for Preparing ECO 2000 as a Web-Assisted Course."

Florida Department of Business and Professional Regulation, 3/1997-6/1997, $17,898, "Minority Homeownership in Florida," with Stacy Sirmans.

U.S. Department of Labor, Pension Welfare and Benefit Administration, 12/1996-8/1997, $20,000, "The Impact of Rising 401(k) Pension Coverage on Retirement Income," with William Even.

U.S. Department of Labor, Pension Welfare and Benefit Administration, 3/1996-6/1997, $15,000, "The Determinants of 401(k) Participation and Contribution Levels," with William Even.

Florida Department of Business and Professional Regulation, 4/1996-6/1996, $22,702, "Forecasting the Number of New Florida Real Estate Licensees," with Stacy Sirmans.

U.S. Department of Labor, Pension Welfare and Benefit Administration, 3/1995-6/1996, $15,000, "Explaining the Decline in Pension Coverage of Less Educated Workers," with William Even.

Florida State University COFRS Grant, 6/1994-8/1994, $8,000, "The Relative Compensation and Quality of Public and Private Sector Workers."

W.E. Upjohn Institute for Employment Research, 3/1994-12/1995, $35,000, "Pensions and Productivity," with Stuart Dorsey and Christopher Cornwell.

Florida Division of Workers' Compensation, 1/94-12/1995, $100,000, "Worker's Compensation Recipency in Union and Nonunion Workplaces," part of a service contract titled "Research Partnership with the Division of Workers' Compensation," co-investigator (one of several).

University of Wisconsin Institute for Research on Poverty Small Grant Program, 7/1993-6/1994, $15,000, "Racial Composition, Wages, and Quality Sorting," with Barry Hirsch.

U.S. Department of Labor, Pension Welfare and Benefit Administration, 7/1993-6/1993, $10,000, "Trends in Individual and Family Pension Coverage," with William Even.

U.S. Department of Labor, Pension Welfare and Benefit Administration, 6/1992-5/1993, $10,000, "The Pension Coverage of Young and Mature Workers," with William Even.

U.S. Department of Labor, Pension Welfare and Benefit Administration and American Society of Pension Actuaries, 6/1991-5/1992, $10,000, "A Conference on Current Pension Policy Issues," with William Even.

Miami University Faculty Research Grant, 6/1991-8/1991, $4,000, "Projected Growth in Retiree Health Insurance Liabilities."

Ohio Board of Regents Research Challenge Grant, 1/1990-12/1990, $4,980, "Proposal to Enhance the Data Library of the Center of Pension and Retirement Research," with William Even and Samuel Williamson.

Miami University Faculty Research Grant, 6/1990-8/1990, $4,000, "The Role of Firm Size in Pension Coverage and Options."

Miami University Faculty Research Grant, 6/1989-8/1989, $4,000, "Declining Unionism and the Gender Wage Gap," with William Even.

Participation in National Meetings

Panel Discussant, American Real Estate and Urban Economics Association/ASSA meetings, January 2008.

Presented, "Employee Turnover in the Long-Term Care Industry," at Academy Health Annual Research Meetings, June 2007.

Presented, "Participant Direction in Defined Contribution Pension Plans," at International Atlantic Economic Society meetings, October 2006.

Presented, "The Risk and Return of Pension Investments in Employer Stock," at International Atlantic Economic Society meetings, October 2005.

Presented, "Replacing Earnings After Termination: Evidence from the Displaced Worker Survey," at the Allied Social Science Association/National Association of Forensic Economics, January 2002.

Presented, "Labor Market Transitions of Older Workers," at the Allied Social Science Association/Society of Government Economists meetings, January 1999.

Presented, "Why has the Loss in Pension Coverage Accelerated Among Less Educated Workers?" at the American Economic Association Meetings, 1995.

Presented, "Wages and Gender Composition: Why Do Women's Jobs Pay Less?" at the American Economic Association Meetings, 1994, with Barry Hirsch.

Presented, "Pensions, Labor Turnover, and Employer Size" at the American Economic Association Meetings, 1993, with William Even.

Presented, "Why Did Male Pension Coverage Decline in the 1980s?" at the American Economic Association meetings, 1992, with William Even.

Participation in Regional Meetings

Presented "Unions and Pension Performance: The Role of Pension Design," at Southern Economics Association meetings, November 2009.

Panel member, "Recent Federal Reserve Policy: An Evaluation" at Southern Economics Association meetings, November 2009.

Discussant, "Topics in Health Economics," at Southern Economics Association meetings, November 2009.

Discussant, "Teacher Pay, Principals, and Schooling," at Southern Economics Association meetings, November 2009.

Presented "Is Bigger Still Better?: The Decline of the Wage Premium at Large Firms," at Western Economic Association meetings, July 2009.

Presented "Is Bigger Still Better?: The Decline of the Wage Premium at Large Firms," at Eastern Economic Association meetings, February 2009.

Panel Discussant at the Southern Economic Association meetings, November 2008.

Presented "Is Bigger Still Better?: The Decline of the Wage Premium at Large Firms," at Southern Economic Association meetings, November 2008.

Presented "The Growth of Participant Direction in Defined Contribution Pensions," at Western Economic Association meetings, July 2008.

Chair "Pensions and Retirement" Session at Southern Economic Association meetings, November 2007.

Presented "The Growth of Participant Direction in Defined Contribution Pensions," at Southern Economic Association meetings, November 2007.

Presented, "Participant Direction in Defined Contribution Pension Plans," at Southern Economic Association meetings, November 2006.

Panel Discussant, Southern Economic Association meetings, November 2005.

Presented, "Do Pensions Impede Phased Retirement?" at the Southern Economic Association meetings, November 2004.

Presented, "When Will the Gender Gap in Retirement Income Narrow?" at the Southern Economic Association meetings, November 2003.

Presented, "How Will the Growth of DC and 401(k) Plans Affect Pension Income?" at the Southern Economic Association meetings, November 2002.

Presented, "Racial Composition, Wages, and Quality Sorting," at the Southern Economic Association meetings, November 1999.

Presented, "Racial and Ethnic Differences in Pension Coverage and Benefit Levels," at the Southern Economic Association meetings, November 1998.

Presented, "Factors Influencing Participation and Contribution Levels in 401(k) Plans," at the Western Economics Association meetings, July 1998.

Presented, "Aging at Work: Employment Determination, Firm Strategies, and Public Policy in the United States," at the Western Economic Association meetings, July 1994.

Presented, "Why Did Male Pension Coverage Decline in the 1980s?" at the Western Economic Association meetings, July 1992.

Presented "Plant Size and the Decline of Unionism," at the Southern Economic Association meetings, 1989, with William Even.

Panel Discussant, Southern Economic Association meetings, November 1989.

Presented "The Labor Force Participation and Earnings Profiles of Married Female Immigrants," at the Southern Economic Association meetings, November 1988.

Presented "Pensions, Screening, and the Gender Wage Gap," at the Southern Economic Association meetings, November 1988.

Session Chair and Panel Discussant at the Southern Economic Association meetings, November 1988.

Participation in Invited Seminars, Conferences, and other Presentations

Presented, "Teaching Macroeconomics During Troubled Times," at Creative Ideas for Your Basic Economics Course Conference at Florida State University, February 2012.

Presented, "Participant Direction in Defined Contribution Pension Plans," at Pennsylvania State University, April 2010.

Presented, "The Parallels Between the Japanese Economic Crisis of the 1990s and the US Today" at Creative Ideas for Your Basic Economics Course Conference at Florida State University, February 2010.

Chair "Minimum Wage & EITC" Session at Society of Labor Economists meetings, May 2009.

Presented "Participant Direction in Defined Contribution Plans," at Lehigh University, April 2009.

Presented "Is Bigger Still Better?: The Decline of the Wage Premium at Large Firms," at Association of Private Enterprise Education meetings, April 2009.

Presented "The Growth of Participant Direction in Defined Contribution Pensions," at Trinity University, October 2008.

Presented "The Growth of Participant Direction in Defined Contribution Pensions," at Georgia State University, April 2008.

Presented "The Growth of Participant Direction in Defined Contribution Pensions," at Association of Private Enterprise Education meetings, April 2008.
Presented, "Improving Pension Coverage at Small Firms," at Hudson Institute, May 2006.

Presented, "Participant Direction in Defined Contribution Plans," at Society of Labor Economics meetings, May 2006.

Presented, "Participant Direction in Defined Contribution Plans," at Association of Private Enterprise Education meetings, April 2006.

Presented, "Participant Direction in Defined Contribution Plans," at University of Wisconsin-Milwaukee, April 2006.

Invited Panel Participant for Pepper Foundation and Center Symposium on pension reform, Washington, DC, February 2006.

Presented, "The Risk and Return of Pension Investments in Employer Stock," at West Virginia University, April 2005.

Presented, "The Risk and Return of Pension Investments in Employer Stock," at the University of Kentucky, November 2004.

Presented, "The Causes and Consequences of Company Stock Holdings in Pension Funds," at the Federal Reserve Bank of Atlanta, April 2004.

Presented, "The Causes and Consequences of Company Stock Holdings in Pension Funds," at the University of Oklahoma, February 2004.

Presented, "Tracking Union and Nonunion Wages in the U.S.: Can the Evidence be Reconciled?" at the Middlebury Annual Conference on Economic Issues, April 2002.

Presented, "How Will the Growth of DC and 401(k) Plans Affect Pension Income?" at the Miami University Center for Pension and Retirement Research Conference, June 2001.

Presented, "Benefits and Worker Productivity," Benefits for the Workplace of Tomorrow Conference, Wharton School, University of Pennsylvania, May 2001.

Participant, Innovations in Managing the Financial Risks of Retirement Conference, Wharton School, University of Pennsylvania, May 2000.

Presented "Using Hi-Tech in Large Lectures," at Association of Private Enterprise Education meetings, April 2000.

Presented "Employee Participation in 401(k) Plans," at University of Wisconsin-Milwaukee, October 1999.

Presented "Gender, Race, and Ethnicity in the Labor Market," as part of the Smith Chair course in Labor Economics at Brigham Young University, September 1999.

Presented, "The Decline in Pension Coverage Among Less Educated Workers," at the Florida State University Economics Department Seminar Series, 1996.

Presented, "Children's Effects on Women's Labor Market Attachment and Earnings" at the Conference on the Changes in Working Time in Canada and the United States, Canadian Employment Research Forum, 1996.

Presented, "Earnings, Rents, and Competition in the Airline Labor Market" at the Ohio State University Economics Department Seminar Series, 1996.

Presented, "Earnings, Rents, and Competition in the Airline Labor Market" at the Florida State University Economics Department Seminar Series, 1995.

Presented, "Employer Size and Labor Turnover: The Role of Pensions," at Syracuse University, 1995.

Presented, "Earnings, Rents, and Competition in the Airline Labor Market" while visiting scholar at the Federal Reserve Bank of Cleveland, 1995.

Presented, "Trends in Individual and Household Pension Coverage," at the Miami University Center for Pension and Retirement Research Conference, 1994.

Presented, "Racial Composition, Quality Sorting, and the Black-White Wage Gap" at the University of Wisconsin, Institute for Research on Poverty, Small Grants Workshop, 1993, with Barry Hirsch.

Presented, "Why Did Male Pension Coverage Decline in the 1980s?" at the Florida State University Economics Department Seminar Series, 1992.

Participant at National Bureau of Economic Research (NBER) Labor Studies meetings of the Summer Institute, 1992.

Presented, "Why Did Male Pension Coverage Decline in the 1980s?" at the Miami University Conference on Current Pension Policy Issues, 1992.

Organizer and participant at conference on "Contemporary Issues in Pension Economics," hosted by the Center for Pension and Retirement Research, Miami University, 1990.

Presented "The Effect of International Competition on Union and Nonunion Wages," at the University of Cincinnati Seminar Series, 1987.

    Atty: Thomas Brown; Florida, Orange County; Case No. 07-CA-2645 DIV 34; gave deposition and testified at trial; wrongful injury; 2011.

23. Lillie Conyers and James Conyers vs. Werner Enterprises et al.
    Atty: Thomas Brown; Florida, Jackson County; Case No. 09-1174-CA; gave deposition; wrongful injury; 2011.

24. Shannon McCants vs. Wackenhut Corporation
    Atty: Dawn Pompey Whitehurst; Duval County, Florida; gave deposition and testified at trial; wrongful death; 2011; Case No: 16-2008-CA-014834

25. Christina Whipple versus R.E.S.A, Inc.
    Atty: Susan Haney; Bexar County, Texas; gave deposition; business damages; 2011; Case No.: 2009-CI-17074

26. Daniel Plouffe, et al. versus General Motors, LLC
    Atty: Michael Pitt; Wayne County, Michigan; gave deposition; age discrimination; 2012; Case No.: Case No. 11-007645-CL

27. Johnny Cash versus State Farm
    Atty: Steven Andrews; Leon County, Florida; testified at trial; wrongful injury; 2012; Case No.: Case No. 10-CA-2429

The State Auditor's office did not receive a response from the **Department of Elementary and Secondary Education, Adair County, Boone County, Callaway County, Cass County, Clay County, Cole County, Jackson County, Jasper County, St. Charles County, St. Louis County, Taney County,** the **City of Cape Girardeau,** the **City of Columbia,** the **City of Jefferson,** the **City of Joplin,** the **City of Kirksville,** the **City of Mexico,** the **City of St. Joseph,** the **City of St. Louis,** the **City of Springfield,** the **City of Union,** the **City of Wentzville,** the **City of West Plains, Cape Girardeau 63 School District, Hannibal 60 School District, State Technical College of Missouri, Metropolitan Community College,** and **St. Louis Community College, Harris-Stowe State University, Lincoln University, Northwest Missouri State University, Southeast Missouri State University, Truman State University, Kansas City Board of Police Commissioners, The Metropolitan Police Department - City of St. Louis,** the **St. Louis County Board of Elections,** the **Board of Election Commissioners City of St. Louis,** and the **Clay County Board of Election Commissioners.**

Fiscal Note Summary

State and local governments estimate no direct costs or savings from the proposal, but operating costs could increase by an unknown annual amount that could be significant. State and local government tax revenue could change by an unknown annual amount ranging from a $7.5 million decrease to a $262 million increase depending on business decisions.

The Honorable Nicole Galloway
State Auditor
State Capitol Building
Jefferson City, MO 65101

RE: Petition approval request from Richard Von Glahn regarding a proposed statutory amendment to Chapter 290, Version 7 (2018-202)

Dear Auditor Galloway:

Enclosed please find an initiative petition sample sheet for a proposal to amend the Revised Statutes of Missouri filed by Richard Von Glahn on April 3, 2017.

We are referring the enclosed petition sample sheet to you for the purposes of preparing a fiscal note and fiscal note summary as required by Section 116.332, RSMo. Section 116.175.2, RSMo requires the state auditor to forward the fiscal note and fiscal note summary to the attorney general within twenty days of receipt of the petition sample sheet.

Thank you for your immediate consideration of this request.

Sincerely,

John R. Ashcroft

Be it enacted by the people of the state of Missouri:

Sections 290.502, 290.512, and 290.527 of the Revised Statutes of Missouri are amended and a new section to be known as section 290.529 is enacted to read as follows:

290.502. 1. Except as may be otherwise provided pursuant to sections 290.500 to 290.530, effective January 1, 2007, every employer shall pay to each employee wages at the rate of $6.50 per hour, or wages at the same rate or rates set under the provisions of federal law as the prevailing federal minimum wage applicable to those covered jobs in interstate commerce, whichever rate per hour is higher.

2. The minimum wage shall be increased or decreased on January 1, 2008, and on January 1 of successive years, by the increase or decrease in the cost of living. On September 30, 2007, and on each September 30 of each successive year, the director shall measure the increase or decrease in the cost of living by the percentage increase or decrease as of the preceding July over the level as of July of the immediately preceding year of the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) or successor index as published by the U.S. Department of Labor or its successor agency, with the amount of the minimum wage increase or decrease rounded to the nearest five cents.

3. Except as may be otherwise provided pursuant to sections 290.500 to 290.530, and notwithstanding subsection (1) of this section, effective January 1, 2019, every employer shall pay to each employee wages at the rate of not less than $8.25 per hour, or wages at the same rate or rates set under the provisions of federal law as the prevailing federal minimum wage applicable to those covered jobs in interstate commerce, whichever rate per hour is higher. Thereafter, the minimum wage established by this subsection shall be increased each year by $.75 per hour, effective January 1 of each of the next five years, until it reaches $12.00 per hour, effective January 1, 2024. Thereafter, the minimum wage established by this subsection shall be increased or decreased on January 1, 2025, and on January 1 of successive years, per the method set forth in subsection (2) of this section. If at any time the federal minimum wage rate is above or is thereafter increased above the minimum wage then in effect under this subsection, the minimum wage required by this subsection shall continue to be increased pursuant to this subsection (3), but the higher federal rate shall immediately become the minimum wage required by this subsection and shall be increased or decreased per the method set forth in subsection (2) for so long as it remains higher than the state minimum wage required and increased pursuant to this subsection.

4. For purposes of this section, the term "public employer" means an employer that is the state or a political subdivision of the state, including a department, agency, officer, bureau, division, board, commission, or instrumentality of the state, or a city, county, town, village, school district, or other political subdivision of the state. Subsection (3) of this section shall not apply to a public employer with respect to its employees. Any public employer that is subject to subsections (1) and (2) of this section shall continue to be subject to those subsections.

290.512. 1. [No] Except as provided in subsection (2) of this section, no employer of any employee who receives and retains compensation in the form of gratuities in addition to wages is required to pay wages in excess of fifty percent of the minimum wage rate specified in sections 290.500 to 290.530, however, total compensation for such employee shall total at least the minimum wage specified in sections 290.500 to 290.530, the difference being made up by the employer.

2. Beginning January 1, 2019 and effective on the dates set forth below in this subsection, and notwithstanding the percentage established in subsection (1) of this section, no employer of any employee who receives and retains compensation in the form of gratuities in addition to wages is required to pay wages in excess of the percent set forth below in this subsection of the minimum wage rate specified in subsection (3) of section 290.502 or, where applicable, the minimum wage rate otherwise specified in sections 290.500 to 290.530:

(1) fifty-five percent, effective January 1, 2019;
(2) sixty percent, effective January 1, 2020;
(3) sixty-five percent, effective January 1, 2021;
(4) seventy percent, effective January 1, 2022;
(5) seventy-five percent, effective January 1, 2023;
(6) eighty percent, effective January 1, 2024;
(7) eighty-five percent, effective January 1, 2025;
(8) ninety percent, effective January 1, 2026;
(9) ninety-five percent, effective January 1, 2027;
(10) one hundred percent, effective January 1, 2028;

however, in all cases, total compensation for such employee shall total at least the minimum wage specified in subsection (3) of section 290.502 or, where applicable, the minimum wage rate otherwise specified in sections 290.500 to 290.530, the difference being made up by the employer.

3. For purposes of this section, the term "public employer" means an employer that is the state or a political subdivision of the state, including a department, agency, officer, bureau, division, board, commission, or instrumentality of the state, or a city, county, town, village, school district, or other political subdivision of the state. Subsection (2) of this section shall not apply to a public employer with respect to its employees. Any public employer that is subject to subsection (1) of this section shall continue to be subject to that subsection at the percentage set forth therein of the minimum wage rate specified in subsections (1) and (2) of section 290.502 or, where applicable, the minimum wage rate otherwise specified in sections 290.500 to 290.530.

[2.] 4. If an employee receives and retains compensation in the form of goods or services as an incident of his employment and if he is not required to exercise any discretion in order to receive the goods or services, the employer is required to pay only the difference between the fair market value of the goods and services and the minimum wage otherwise required to be paid by sections 290.500 to 290.530. The fair market value of the goods and services shall be computed on a weekly basis. The director shall provide by regulation a method of valuing the goods and services received by any employee in lieu of the wages otherwise required to be paid under the provisions of sections 290.500 to 290.530. He shall also provide by regulation a method of determining those types of goods and services that are an incident of employment the receipt of which does not require any discretion on the part of the employee.

290.527. Any employer who pays any employee less wages than the wages to which the employee is entitled under or by virtue of sections 290.500 to 290.530 shall be liable to the employee affected for the full amount of the wage rate and an additional [equal] amount equal to twice the unpaid wages as liquidated damages, less any amount actually paid to the employee by the employer and for costs and such reasonable attorney fees as may be allowed by the court or jury. The employee may bring any legal action necessary to collect the claim. Any agreement between the employee and the employer to work for less than the wage rate shall be no defense to the action. All actions for the collection of any deficiency in wages shall be commenced within [two] three years of the accrual of the cause of action.

290.529. Except in the circumstances set forth in section 290.523, all the provisions of sections 290.500 to 290.530 are severable. If any provision, including any section, subsection, subdivision, paragraph, sentence, or clause, of sections 290.500 to 290.530, or the application thereof to any person or circumstance, is found by a court of competent jurisdiction to be invalid, unconstitutional, or unconstitutionally enacted, such decision shall not affect other provisions or applications of sections 290.500 to 290.530 that can be given effect without the invalid, unconstitutional, or unconstitutionally enacted provision or application.

MISSOURI STATE AUDITOR'S OFFICE
FISCAL NOTE (18-202)

Subject

Initiative petition from Richard Von Glahn regarding a proposed amendment to Chapter 290 of the Revised Statutes of Missouri. (Received April 4, 2017)

Date

April 24, 2017

Description

This proposal would amend Chapter 290 of the Revised Statutes of Missouri.

The amendment is to be voted on in November 2018.

Public comments and other input

The State Auditor's office requested input from the **Attorney General's office,** the **Department of Agriculture,** the **Department of Economic Development,** the **Department of Elementary and Secondary Education,** the **Department of Higher Education,** the **Department of Health and Senior Services,** the **Department of Insurance, Financial Institutions and Professional Registration,** the **Department of Mental Health,** the **Department of Natural Resources,** the **Department of Corrections,** the **Department of Labor and Industrial Relations,** the **Department of Revenue,** the **Department of Public Safety,** the **Department of Social Services,** the **Governor's office,** the **Missouri House of Representatives,** the **Department of Conservation,** the **Department of Transportation,** the **Office of Administration,** the **Office of State Courts Administrator,** the **Missouri Senate,** the **Secretary of State's office,** the **Office of the State Public Defender,** the **State Treasurer's office, Adair County, Boone County, Callaway County, Cass County, Clay County, Cole County, Greene County, Jackson County, Jasper County, St. Charles County, St. Louis County, Taney County,** the **City of Cape Girardeau,** the **City of Columbia,** the **City of Jefferson,** the **City of Joplin,** the **City of Kansas City,** the **City of Kirksville,** the **City of Mexico,** the **City of Raymore,** the **City of St. Joseph,** the **City of St. Louis,** the **City of Springfield,** the **City of Union,** the **City of Wentzville,** the **City of West Plains, Cape Girardeau 63 School District, Hannibal 60 School District, State Technical College of Missouri, Metropolitan Community College, University of Missouri, St. Louis Community College, University of Central Missouri, Harris-Stowe State University, Lincoln University, Missouri State University, Missouri Southern State University, Missouri Western State University, Northwest Missouri State University, Southeast Missouri State University, Truman State University, Kansas City Board of Police Commissioners, The Metropolitan Police Department - City of St. Louis,** the **St. Louis County Board of Elections,** the **Board of Election**

Commissioners City of St. Louis, the **Kansas City Board of Election Commissioners,** the **Platte County Board of Elections,** the **Jackson County Election Board,** and the **Clay County Board of Election Commissioners**.

Lara Granich and **Missouri Jobs with Justice Voter Action** provided information as proponents of the proposal to the State Auditor's office.

Robert Bonney, Chief Executive Officer of the Missouri Restaurant Association provided information as an opponent of the proposal to the State Auditor's office.

Assumptions

Officials from the **Attorney General's office** indicated they expect that, to the extent that the enactment of this proposal would result in increased litigation, they can absorb the costs associated with that increased litigation using existing resources. However, if the enactment of this proposal were to result in substantial additional litigation, they may request additional appropriations. They do not expect that the enactment of this proposal would result in any other increased costs to their office.

Officials from the **Department of Agriculture** indicated there is no fiscal impact to their department for this initiative petition.

Officials from the **Department of Economic Development** indicated no impact to their department.

Officials from the **Department of Higher Education** indicated this initiative petition would not have a fiscal impact on their department since public employers are exempt from the new provisions proposed.

Officials from the **Department of Health and Senior Services** indicated this proposal would have no direct fiscal impact on their department since government employees are exempt from its provisions. However, employees of certain entities that receive funding through the department's budget would be impacted, such as Medicaid Home and Community Based Services vendors/providers and Area Agencies on Aging.

Officials from the **Department of Insurance, Financial Institutions and Professional Registration** indicated this petition, if passed, will have no cost or savings to their department.

Officials from the **Department of Mental Health** indicated this proposal creates no direct obligations or requirements to their department that would result in a fiscal impact.

Officials from the **Department of Natural Resources** indicated their department defers to the Office of Administration to determine the fiscal impact of this proposal.

Officials from the **Department of Corrections** indicated they defer to the Office of Administration.

Officials from the **Department of Labor and Industrial Relations** indicated no fiscal impact on their department.

Officials from the **Department of Revenue** indicated this petition will have no fiscal impact on their department. Their department defers to the Office of Administration for a state impact.

Officials from the **Department of Public Safety - Office of the Director** indicated they will defer to the response provided for this initiative petition by the Office of Administration - Human Resources.

Officials from the **Department of Social Services** indicated no fiscal impact on their department. They defer to the Office of Administration.

Officials from the **Governor's office** indicated there should be no added cost or savings to their office.

Officials from the **Missouri House of Representatives** indicated no fiscal impact to their office.

Officials from the **Department of Conservation** indicated that no adverse fiscal impact to their department would be expected as a result of this proposal.

Officials from the **Department of Transportation** indicated unknown fiscal impact.

Officials from the **Office of Administration** indicated the proposal amends Sections 290.502, 290.512, 290.527, RSMo and adds Section 290.529, RSMo.

Section 290.502, RSMo, increases the minimum wage to $8.25 per hour, beginning January 1, 2019 and by another $0.75 per hour each year until it reaches $12.00 per hour beginning January 1, 2024. Thereafter, the minimum wage will be adjusted annually based on the increase/decrease in the cost of living.

Section 290.512, RSMo, increases the base salary for tipped employees. Effective January 1, 2019, employers must pay at least 55% of the minimum wage rate to tipped employees. Each year thereafter the rate increases by five percent until January 1, 2028 when tipped employees should be paid 100% of the minimum wage as established in Section 290.502, RSMo.

The proposal exempts public employers from both requirements; therefore there would be no cost to the State of Missouri.

Because no tax rates are affected, there is no direct impact on general and total state revenues. However, these proposals may have several indirect affects, which could impact revenue collections by an unknown amount, including but not limited to:

- Increased wages for certain employees. According to the US BLS, in 2015, Missouri had 57,000 hourly employees earning wages at or below the federal minimum wage;[1]
- Increased consumption by those employees;
- Lower overall employment (if employers choose to hold costs steady);
- Lower business investment (if employers' payrolls increase);
- Increased prices as firms pass–through labor costs.

This proposal should not impact their office.

Officials from the **Office of State Courts Administrator** indicated there is no fiscal impact on the courts.

Officials from the **Missouri Senate** indicated no fiscal impact on their office.

Officials from the **Secretary of State's office** indicated their office is required to pay for publishing in local newspapers the full text of each statewide ballot measure as directed by Article XII, Section 2(b) of the Missouri Constitution and Section 116.230-116.290, RSMo. Their office is provided with core funding to handle a certain amount of normal activity resulting from each year's legislative session. Funding for this item is adjusted each year depending upon the election cycle with $1.3 million historically appropriated in odd numbered fiscal years and $100,000 appropriated in even numbered fiscal years to meet these requirements. Through FY (fiscal year) 2013, the appropriation had historically been an estimated appropriation because the final cost is dependent upon the number of ballot measures approved by the General Assembly and the initiative petitions certified for the ballot. In FY 2015, the General Assembly changed the appropriation so that it was no longer an estimated appropriation. In FY 2017 their office was appropriated $2.6 million to publish the full text of the measures. In FY 2017, at the August and November elections, there were 6 statewide Constitutional Amendments or ballot propositions that cost $2.4 million to publish (an average of $400,000 per issue). Their office will continue to assume, for the purposes of this fiscal note, that it should have the full appropriation authority it needs to meet the publishing requirements. Because these requirements are mandatory, they reserve the right to request funding to meet the cost of their publishing requirements if the Governor and the General Assembly again change the amount or continue to not designate it as an estimated appropriation.

Officials from the **Office of the State Public Defender** indicated this initiative petition will not have any significant impact on their office.

Officials from the **State Treasurer's office** indicated they do not predict an immediate fiscal impact upon their office if Missouri's minimum wage rate were increased to $12.00 per hour. However, the potential future impact of applying cost of living increases and/or increases in the federal minimum wage to a Missouri minimum wage of $12.00 per hour, as called for elsewhere in Section 290.502, RSMo., is unknown.

[1] http://www.bls.gov/opub/reports/minimum-wage/2015/home.htm

Officials from **Greene County** indicated there are no estimated costs or savings to report from their county for this initiative petition.

Officials from the **City of Kansas City** indicated this petition may have a small negative fiscal impact on their city as a result of the increased hourly minimum wage being higher than the hourly rate paid some city employees.

Officials from the **City of Raymore** indicated no fiscal impact.

Officials from **University of Missouri** indicated they are not able to estimate any significant financial impact on their university.

Officials from **University of Central Missouri** indicated they estimate no fiscal impact since they are excluded under the public employer definition in section 4.

Officials from the **Missouri State University** indicated no fiscal impact.

Officials from **Missouri Southern State University** indicated they do not anticipate any fiscal impact from this initiative petition.

Officials from **Missouri Western State University** indicated the wording is unclear as to whether Colleges/Universities are included in this petition. In assuming they are included, they calculate the following significant fiscal impact to their university. The proposal will have a severe negative impact on the university. The proposed minimum wage increase in 2019 to $8.25 will impact their payroll expenditures by approximately $187,007.00. With continued increases as proposed annually to 2024 the over payroll increase will be approximately $1,637,920.00.

Officials from the **Kansas City Board of Election Commissioners** indicated no fiscal effect on their operations.

Officials from the **Platte County Board of Elections** indicated no fiscal impact.

Officials from the **Jackson County Election Board** indicated this petition does not have a fiscal impact on their office.

Lara Granich and **Missouri Jobs with Justice Voter Action** provided the following information as proponents of this initiative petition.

Re: Fiscal Impact Analysis of Minimum Wage Initiative Petitions

Summary of Proposed Minimum Wage Initiatives						
Version Number		**Initiative Summary**				
Version Number Used in This Impact Analysis	**Version Number Assigned by the Secretary of State**	**Minimum Wage Level**	**Matches the Federal Minimum Wage When It Is Higher**	**Stronger Penalty for Wage Violations**	**Tipped Worker Minimum Wage (as a % of Full Minimum Wage)**	**Allows Localities to Enact a Local Minimum Wage**
Version 13	2018 - 204	$12 by 2023 *(Start at $8.60 and $.85/year)*	Yes	Yes	No Change	No
Version 14	2018 - 205	$12 by 2023 *(Start at $8.60 and $.85/year)*	Yes	No	No Change	No
Version 15	2018 - 206	$12 by 2023 *(Start at $8.60 and $.85/year)*	No	No	No Change	No
Version 16	2018 - 207	$12 by 2024 *(Start at $8.50 and $.70/year)*	Yes	Yes	No Change	No
Version 17	2018 - 208	$12 by 2024 *(Start at $8.50 and $.70/year)*	Yes	No	No Change	No
Version 18	2018 - 209	$12 by 2024 *(Start at $8.50 and $.70/year)*	No	No	No Change	No

Version 19	2018 - 210	$13 by 2025 *(Start at $8.50 and $.75/year)*	Yes	Yes	No Change	No
Version 20	2018 - 211	$13 by 2025 *(Start at $8.50 and $.75/year)*	Yes	No	No Change	No
Version 21	2018 - 212	$13 by 2025 *(Start at $8.50 and $.75/year)*	No	No	No Change	No
Version 22	2018 - 213	$11 by 2022 (Start at $8.75 and $.75/year)	Yes	Yes	No Change	No
Version 23	2018 - 214	$11 by 2022 (Start at $8.75 and $.75/year)	Yes	No	No Change	No
Version 24	2018 - 215	$11 by 2022 (Start at $8.75 and $.75/year)	No	No	No Change	No
Version 25	2018 - 216	$11 by 2021 (Start at $9; $1/year)	Yes	Yes	No Change	No
Version 26	2018 - 200	$12 by 2022 (Start at $9; $1/year)	Yes	No	No Change	No
Version 27	2018 - 201	$13 by 2023 (Start at $9; $1/year)	Yes	No	No Change	No
Version 28	2018 - 202	$12 by 2024 (Start at $8.25; .75/year)	Yes	Yes	100%	No
Version 29	2018 - 203	$13 by 2025 (Start at $8.50; .75/year)	Yes	Yes	60%	No
Version 30	2018 - 196	$12 by 2022 (Start at $9; $1/year)	Yes	Yes	100%	Yes
Version 31	2018 - 197	$12 by 2022 (Start at $9; $1/year)	Yes	Yes	60%	Yes
Version 32	2018 - 198	$13 by 2023 (Start at 9; $1/year)	Yes	Yes	100%	Yes

Version 33	2018 - 199	$13 by 2023 (Start at $9; $1/year)	Yes	Yes	60%	Yes

This letter is from Lara Granich and Missouri Jobs with Justice Voter Action, proponents of the above-referenced Minimum Wage Initiative Petitions. Pursuant to RSMo. Section 116.175, we write to submit the following fiscal impact information to assist your office in its analysis of the fiscal impact of the above-mentioned seven proposed Minimum Wage Initiative Petitions.

Our analysis estimates the impact of the proposed Minimum Wage Initiative Petitions on state and local sales and personal income tax revenue in Missouri. We follow the process that has been used in the past to estimate the impact of minimum initiative petitions on state and local sales and personal income tax revenue, with some refinements. We also address certain claims that have been made by opponents of similar initiative petitions in the past.

As these petitions exclude public workers from the proposed minimum wage increases, we do not include in our analysis an estimate of the impact on state and local payroll costs of the proposed Minimum Wage Initiative Petitions.

I. Estimate of Number of Workers Affected Statewide and the Impact on Their Wages

Table 1. Summary of the Number of Affected Workers and Aggregate Wage Increases for Missouri in the Final Year of Minimum Wage Implementation.

Proposal	Year of Peak Minimum Wage (MW)	Proposed Peak MW	Tipped MW in Peak MW Year	Workers Affected by MW increase	Aggregate Annual Wage Increase in Nominal Dollars
13,14,15[a]	2023	$ 12.00	$ 6.00	835,350	$4,358,798,129
16,17,18[a]	2024	$ 12.00	$ 6.00	819,652	$4,209,438,048
19,20,21[a]	2025	$ 13.00	$ 6.50	900,788	$5,309,336,662
22,23,24[a]	2022	$ 11.00	$ 5.50	738,515	$3,347,138,756
25	2021	$ 11.00	$ 5.50	761,164	$3,469,534,559
26	2022	$ 12.00	$ 6.00	852,284	$4,510,285,824
27	2023	$ 13.00	$ 6.50	949,801	$5,667,065,534
28	2024	$ 12.00	$ 9.60	832,328	$4,288,614,460
29	2025	$ 13.00	$ 7.80	905,942	$5,332,471,496
30	2022	$ 12.00	$ 8.40	864,090	$4,558,317,729
31	2022	$ 12.00	$ 6.84	855,887	$4,523,341,931

32	2023	$ 13.00	$ 9.75	948,421	$5,745,051,956
33	2023	$ 13.00	$ 7.54	942,566	$5,685,951,766

Notes: Author's Analysis of American Community Survey (ACS) Data from 2014.
(a) Since these proposals only vary on non-economic factors, their economic and fiscal impacts are treated as equal for the purposes of this report.

Across the proposals analyzed, the total aggregate wage increase for workers in Missouri ranges from a low of $3.347 billion (Proposals 22-24) to a high of $5.745 billion under Proposal 32. While some proposals have the same final impact numbers, they have different impacts in the initial years (not listed) based on the relative pace of increases in earlier years. A full, year-by-year impact analysis is presented in Appendix Tables A1 through A13 below.

The wage impact of an increase in the minimum wage for the state of Missouri is calculated using the following procedure. The American Community Survey (ACS) Public Use Micro Sample for the most recent year available (2014) for the state of Missouri was downloaded from the US Census Bureau. The American Community Survey was chosen over the Current Population survey because the ACS has a significantly larger sample. We followed the method of Perry, Thomason, and Bernhardt (2016) for calculating an hourly wage rate from the ACS based on observed total annual wage income, typical hours worked each week and weeks worked per year. Since ACS income figures are clustered around whole-numbers, we smoothed the wage distribution by randomly adding or subtracting $0.25 from each wage figure.

Wage adjustments were made only for those individuals earning less than the proposed minimum wage, or proposed tipped minimum wage. We did not make additional adjustments for the "ripple effect" of minimum wage increases on workers earning slightly above the new threshold. Recent evidence suggests that workers earning up to 15 percent above of the minimum wage also receive small increases in response to a minimum wage increase. (See Wicks-Lim (2006) and Dube, Giuliano and Leonard (2015).) Thus, the estimated impacts listed above are likely to be smaller than the actual impact of increasing the minimum wage to the proposed level.

The proposed minimum wage increases exclude public employees. However, it was not practicable to exclude public employees from these calculations because the ACS does not have a published variable that allows for identification of public employees. Nonetheless, this inclusion of public employees should have only a minimal impact on our results, since their numbers are small and most already earn more than the proposed minimum wage increases.[1]

All wages from the 2014 survey were adjusted upward to account for inflation between the time of the survey and the time of measurement of the impact. Actual rates of inflation were used to adjust wages up to 2016. For all subsequent years between 2017 and 2028, baseline wages were adjusted using the projected annual average rate of change in the Consumer Price Index for Urban Workers (CPI-U) for the Midwest region. The 2015 and 2016 Missouri Minimum wage of $7.65 was adjusted by the same factor prior to measuring the impact of a change to the proposed minimum wage in 2019.

After these adjustments, the resulting hourly wage of all employees was compared to the proposed minimum wage. A total of twenty-one proposals were analyzed. For each proposal, we constructed a baseline wage scenario that used only basic wage changes from expected inflation rates to predict each ACS respondent's hourly wage rate in each year

[1] For Missouri's state employees, this can be validated by viewing the earnings of all state employees at: http://mapyourtaxes.mo.gov/MAP/Employees/. In larger counties and cities most all public employees already earn more than the highest proposed minimum wage. Smaller counties and towns may have some public employees who earn less than the highest proposed minimum.

between 2019 and 2028. We then constructed a counterfactual, or "proposed" wage distribution for each worker under all twenty-one minimum wage proposed scenarios. Since the minimum wage proposals offer nine different paths for raising the minimum wage for all non-tipped private sector workers, and different wage paths for tipped workers, we create separate minimum wage changes for tipped and non-tipped workers. Specifically, we used information on a worker's occupation and observed wage levels to separately identify tipped workers and assign them the proposed tipped minimum wage in each year, rather than the higher non-tipped minimum wage.[2]

If the proposed minimum wage was less than the inflation-adjusted hourly earnings of an employee, then no impact was calculated. If the proposed minimum wage was more than the hourly earnings for an employee, then the difference between the inflation-adjusted hourly earnings (i.e. baseline) and the proposed minimum wage was calculated. That difference was multiplied by the number of hours the employee worked in the year to calculate the annual impact for that employee. The result was then multiplied by a weighing factor for that employee in the population. The total impact for the state of Missouri was then summed across all affected workers to generate a total estimated increase in wage income in the state.

We do not include an estimate of job losses due to minimum wage changes. Existing research is clear that past minimum wage increases have had no measurable effect on aggregate employment levels. Larger minimum wage increases, such as those in Los Angeles, Seattle, and other jurisdictions, have not yet been studied to detect a clear disemployment effect. While it is possible that there may be some employment losses due to automation or other factors, this potential negative effect is likely offset by the positive potential job growth stemming from multiplier effects of the spending of minimum wage workers who receive substantial raises. There is substantial research to indicate that increases in the minimum wage have multiplier effects that increase the direct effects. For this reason and because of the likely increases in wages for individuals who earn above the proposed minimum wage rates, the impacts summarized in the table are considered conservative estimates relative to the total impact that would occur as a result of increasing the minimum wage to the proposed levels.

II. Economic Literature on the Impact of Minimum Wage Increases on Employment

Next, it is necessary to review the economic literature on the impact of minimum wage increases on employment. Opponents often claim that minimum wage increases may reduce employment in a state. If that is true, then those employment reductions would result in reductions in state income and sales tax revenue. However, review of the most credible recent empirical research on the minimum wage shows that increases in the minimum wage have had no discernible impact on employment. We thus conclude that it is not appropriate to project that the proposed initiative petitions would result in any detectable employment reduction, and resulting losses in income and sales tax revenue, or increases in unemployment-related costs to the state.

Economists have conducted hundreds of studies of the employment impact of the minimum wage. A recent meta-study – a formal statistical study of studies – by Doucouliagos and Stanley (2009) reviewed all the research conducted over the last three decades on the employment impact of minimum wage increases on teenagers in the United States. The researchers concluded that the minimum wage has little or no discernible effect on the employment prospects of low-wage workers. Their study followed a rigorous, peer-reviewed procedure and has the advantage of using a set of predetermined, objective criteria for weighing the validity of statistical findings across studies with different results.

[2] We defined tipped workers as those employed in occupations that typically receive a large share of income as tips. These occupations were 'Bartenders' (4040), 'Waiters and Waitresses', 'Food Servers, Non-restaurant' and 'Miscellaneous food preparation and serving related workers including dining room and cafeteria attendants and bartender helpers'.

(Source: Doucouliagos, Hristos and T. D. Stanley. 2009. "Publication Selection Bias in Minimum-Wage Research? A Meta-Regression Analysis." British Journal of Industrial Relations,vol. 47, no. 2, pp. 406-428.)

Recent theoretical and empirical research emphasizes several explanations for the consistently negligible employment impacts of moderate increases in the minimum wage. First, relative to total wage costs, minimum-wage increases are small. Second, employers and workers appear to respond to minimum-wage increases in many ways that reduce the direct cost to employers and substantially reduce or eliminate the need to cut employment.

Probably the most important economic response to a higher minimum wage is a reduction in turnover. At higher wages, employers fill vacancies faster and retain employees longer, boosting total employment and average productivity per worker while reducing direct and indirect training costs. Dube, Lester, and Reich (2012), for example, examined the effect of the minimum wage on labor turnover among teens and restaurant workers. They find "...striking evidence that separations, new hires, and turnover rates for teens and restaurant workers fall substantially following a minimum wage increase..." (p. 2). Their findings, using nationally representative data, are consistent with local case studies of the minimum wage and related "living wage" laws, including Dube, Naidu, and Reich's (2007) analysis of the San Francisco city-wide minimum wage; Fairris's (2005) study of local government contractors in Los Angeles; Howes (2005) on homecare workers in California; and Reich, Hall, and Jacobs (2005) on workers at the San Francisco airport.
(Sources: Dube, Arindrajit, T. William Lester, and Michael Reich. 2012. "Minimum Wage Shocks, Employment Flows and Labor Market Frictions." Berkeley, CA: Institute for Research on Labor and Employment. http://escholarship.org/uc/item/76p927ks; Dube, Arindrajit, Suresh Naidu, and Michael Reich. 2007. "The Economic Effects of a Citywide Minimum Wage." *Industrial and Labor Relations Review*, vol. 60, no. 4, pp. 522-543; Fairris, David. 2005. "The Impact of Living Wages on Employers: A Control Group Analysis of the Los Angeles Ordinance." *Industrial Relations*, vol. 44, no. 1, pp. 84-105; Howes, Candace. 2005. "Living Wages and the Retention of Home Care Workers in San Francisco." *Industrial Relations*, vol. 44, 5 no. 1, pp. 139-163; Reich, Michael, Peter Hall, and Ken Jacobs. 2005. "Living Wage Policies at the San Francisco Airport: Impacts on Workers and Businesses." *Industrial Relations*, vol. 44, no. 1, pp. 106-138.)

Employers also appear to respond to increases in the minimum wage by taking measures to boost productivity. Hirsch, Kaufman, and Zelenska's (2011) study of the impact of the federal minimum wage increase on 81 fast-food restaurants in Georgia and Alabama, for example, asked fast-food managers about the scope for efficiency improvements in response to the minimum-wage rise. About 90 percent of managers indicated that they planned to respond to the minimum wage increase with increased performance standards such as "requiring a better attendance and on-time record, faster and more proficient performance of job duties, taking on additional tasks, and faster termination of poor performers." (p. 27) Roughly the same share of managers said that they sought to "boost morale" by presenting the minimum wage increase as a "challenge to the store" and using this as a way "to energize employees to improve productivity." (pp. 28-29) Based on their interviews with store managers, the researchers concluded that a minimum wage increase may function as a "catalyst or shock that forces managers to step out of the daily routine and think about where cost savings can occur." (p. 29) (Source: Hirsch, Barry T., Bruce Kaufman, and Tetyana Zelenska, "Minimum Wage Channels of Adjustment." IZA Discussion Paper No. 6132. Germany: Institute for the Study of Labor. http://www2.gsu.edu/~ecobth/IZA_HKZ_MinWageCoA_dp6132.pdf)

A higher minimum wage may also motivate workers to work harder, independently of any actions by employers to increase productivity. According to "efficiency wage" theory, wages above the competitive-market rate may elicit greater work effort for several reasons. As Carl Shapiro and Joseph Stiglitz (1984) have argued, higher pay increases the cost to workers of losing their job, potentially inducing greater effort from workers in order to reduce their chances of

being fired. George Akerlof (1982), arguing from a more sociological point of view, has suggested that workers may see higher wages as a gift from employers, leading workers to reciprocate by working harder. (Sources: Shapiro, Carl and Joseph E. Stiglitz. 1984. "Equilibrium unemployment as a worker discipline device." *American Economic Review*, vol. 74, no. 3, pp. 433-444; Akerlof, George A. 1982. "Labor contracts as partial gift exchange." *Quarterly Journal of Economics*, vol. 97, no. 4, pp. 543-569.)

We therefore conclude that the proposed increase in the Missouri minimum wage would have no discernible impact on the employment levels of low-wage workers. Accordingly, we do not factor in reductions in employment, or any resulting decrease in sales tax or income tax. We also do not project any increased unemployment insurance costs – both because we do not project any resulting job losses, and, additionally, because unemployment insurance costs are paid for by employer premiums, and so are ultimately not a cost to the state.

For similar reasons, we do not believe that the proposed increase will have any significant adverse economic impact on small businesses or, by extension, on corporate income tax revenue. In fact, many small businesses already pay little if any corporate income tax.

III. State and Local Sales and Personal Income Tax Revenue Impact of Raising the Minimum Wage

Based on the wage impact figures calculated above, and the understanding that the minimum wage increases would be unlikely to result in offsetting job losses, we next calculate the impact of the projected wage increases on state and local sales and personal income tax revenue in Missouri. We project only the direct impact of the various minimum wage increase scenarios on such tax revenue. We do not attempt to project the additional impact through a GDP multiplier effect, or the potentially higher sales taxes generated if employers offset wage increases with higher prices (which would be taxable).

Personal Income Tax Revenue. In order to determine the projected increase in personal income tax revenues that would result directly from the increased wages, we had to develop assumptions about the effective income tax rates of the affected workers. We made the following assumptions with respect to the effective tax rate:

1. That 25% of affected workers can be claimed as a dependent on another party's Missouri income tax return and, as a result, would pay an effective tax rate of 6.0% on the increase in income;
2. That 50% of the affected workers would file as single taxpayers, would claim one deduction of $2,100, and would be entitled to a standard deduction of $5,800. This would result in an effective tax rate of 2.47%;
3. The remaining 25% would, we assumed, pay no additional Missouri income tax.

In light of these assumptions, the increased Missouri income tax revenue for each petition version can be calculated as follows: (total wage increase * 25% * 6.0%) + (total wage increase * 50% * 2.47%) + (total wage increase *25% * 0%).

Sales Tax Revenue. The state of Missouri imposes a 4.225% state sales tax on those items that are not exempt from the sales tax base. In addition, the average local sales tax rate is 2.95%. As a result, the average Missouri net sales tax rate is 7.175%. To estimate the share of income that is spent on goods and services that are subject to sales taxes, we used data from the 2015 Consumer Expenditure Survey (CES) for the US to estimate the share of income spent on categories that are subject to sales taxes. The CES summary tables list average spending per consumer across 20 different

categories (e.g. housing, transportation, food away from home) and we categorized each spending item as taxable or non-taxable and then calculated the share of spending that we taxable.[3] The resulting rate was 30.3 percent.

Based upon the above assumptions, and the total wage increase calculations for each version of the petition, we estimate that the increase in state income tax revenue resulting from the increased wages would be as follows:

Table 2. Summary of the Impact of Minimum Wage Increases on State and Local Sales and Income Taxes in Year of Full Minimum Wage Final Implementation.

Proposal	State Sales Tax (4.225%)	Local Sales Tax Revenue (2.95%)	Total Sales Tax Revenue Increase	Personal Income Tax Revenue	Total Sales and Personal Income Tax Revenue Increase
13,14,15[a]	$55,814,587	$38,971,132	$94,785,719	$119,213,129	$213,998,848
16,17,18[a]	$53,902,025	$37,635,734	$91,537,759	$115,128,131	$206,665,889
19,20,21[a]	$67,986,272	$47,469,704	$115,455,976	$145,210,358	$260,666,334
22,23,24[a]	$42,860,248	$29,926,090	$72,786,338	$91,544,245	$164,330,583
25	$44,427,531	$31,020,406	$75,447,937	$94,891,770	$170,339,707
26	$57,754,393	$40,325,553	$98,079,946	$123,356,317	$221,436,263
27	$72,567,004	$50,668,086	$123,235,090	$154,994,242	$278,229,333
28	$54,915,882	$38,343,634	$93,259,516	$117,293,605	$210,553,122
29	$68,282,514	$47,676,548	$115,959,062	$145,843,095	$261,802,158
30	$58,369,444	$40,754,996	$99,124,440	$124,669,990	$223,794,430
31	$57,921,577	$40,442,285	$98,363,862	$123,713,402	$222,077,264

Note: Author's Analysis of American Community Survey (ACS) data from 2014 and fiscal impact assumptions described above. All dollars are in nominal figures. (a) Since these proposals only vary on non-economic factors, their economic and fiscal impacts are treated as equal for the purposes of this report.

As described in Table 2 above, the fiscal impact of the proposed minimum wage increases varies based on the ultimate level of the minimum wage and the degree of tipped minimum wage phase out. The estimates of the total fiscal benefit range from $164 million to $282 million annually. Appendix tables A1 through A13 provide a year-by-year summary of the fiscal benefits.

[3] Specifically, the categories we assumed to be subject to state and local sales taxes are: food, household furnishings and equipment, vehicle purchases, gasoline and motor oil, entertainment, and all other expenditures. We assumed that 50 percent of the spending on the category "apparel and services" was taxable.

We hope that this information is useful to your office as your prepare your analyses of the petitions.

Respectfully submitted,

Lara Granich

Robert Bonney, Chief Executive Officer of the Missouri Restaurant Association provided the following information as an opponent of this initiative petition.

These corrections were subsequently provided to the submitted information

In the table on the bottom of page 7 and top of page 8, both averages for 2023 should be based on a 5 year phase-in. Accordingly, the figure on that table should state for 2023 ($12) Average Annual Unemployment Premiums Paid by State of $16,269,523.52.

The corresponding change on the table on page 12 would be to state, for 2023 ($12) Total Net Loss to State Government from Taxes and Unemployment Insurance of ($19,137,851.76).

Re: Initiative Petitions 2018-196 through 2018-216

Dear Mr. Halwes,

I write on behalf of Robert Bonney. Mr. Bonney is the Chief Executive Officer of the Missouri Restaurant Association. Please consider this letter and the accompanying studies as his fiscal impact statement as an opponent of Initiative Petitions 2018-196 through 2018-216 (the "Initiative Petitions"). If passed, any of these twenty-one initiatives would have a substantial negative impact on state and local governments, as well as Missouri small businesses. Those effects are both direct (as noted in Section 1) and secondary (as noted in Sections 2 through 5). The direct effects stem from higher labor and contracting costs that the state and its political subdivisions will incur, despite the Initiatives' effort to exclude government workers from the mandate.

The indirect effects will present a debate this Office has seen before. The proponents of the Initiative Petitions will once again rely on data sourced from political activist groups who claim increases in the minimum wage only serve to create new taxable income. The reality is that such groups approach this issue with political bias. Their analysis is one-sided because it completely ignores the fact that a wage increase does not "create" income from thin air; instead, it is an economic transfer from Missouri businesses to workers. Missouri businesses must pay the new wages "created" by the increases. Political activists' models fail to account, then, for two specific manifestations of the "debit" side of this transfer: reductions in employment, and the reduction in corporate income tax paid based upon business done in Missouri.

The failure to account for any employment effect at any proposed wage increase—even a drastic increase of the minimum wage to $13—is particularly puzzling, because Missouri's most populous areas border Illinois and Kansas. These states, respectively, have minimum wages of $8.25 and $7.25. Neither state adjusts the minimum wage for inflation. Likewise, the second effect—loss of corporate income tax revenues—is a mathematical certainty. Missouri businesses will be the source of the wage increase, which will lower their own taxable income. Assuming a one-to-one substitution of "created" wages for lost corporate income, the difference in the rates

at which these two types of income are taxed will result in a net decrease in state revenue. A dollar from increased wages is taxable by state government in Missouri at 6% or substantially less, whereas Missouri's corporate income tax rate is 6.25%.

On top of these two types of negative outcomes—lower employment and lower state tax revenues—there may be second-order effects to small businesses because they lack the access to capital to weather price fluctuations; they may not survive at all because they may not have the flexibility to simply cut employment, shifting their reliance to capital instead of labor resources, or suffering a decrease in production and revenue.

In short, much of the fiscal impact regarding the current crop of wage-related ballot measures is secondary: they cause transfers of wealth within (or out of) the state economy, and those transfers of wealth then create second-order effects for state and local governments via their collection of tax revenues and provision of welfare services for the unemployed or less-employed. Because these fiscal notes call for the Auditor operate in the area of secondary effects, it is critical that she treat both sides of the wealth transfer equally, and refrain from assessing only one half of the wage increase equation.

1. Direct Labor Cost Impact on State and Local Government Budgets

As noted to the State Auditor's Office previously by Dr. David Macpherson, a nationally prominent labor and economics expert, there are two ways to measure labor cost on state and local government budgets. First, one can use the information included in fiscal note responses from state and local government entities. It is important to note that these fiscal notes provide an incomplete and, therefore, too-low estimate of labor cost. Few state and local government entities respond to requests for a fiscal note response, and those that do respond often ignore important effects.

Second, data from the U.S. Census Bureau's Current Population Survey (CPS) can be used to calculate increased labor cost to state and local government entities in Missouri. To combat this time-honored analysis, and in a blatant attempt to manipulate the fiscal note process, the Initiative Petitions provide that they will raise the minimum wage for private workers, but not for workers employed by state or local governmental entities. No conceivable justification exists for solely raising the minimum wage on private businesses. Whatever the disparity between the value of total compensation at a private business and at a government employer, that disparity does not approach the wage adjustments at issue here, ranging from an inflation adjusted wage increase of 51.16% (($13-$8.60)/$8.60) in Initiative Petitions 2018-198 through 2018-201 to a wage increase of 30.17% (($11-$8.45)/$8.45) in Initiative Petitions 2018-213 through 2018-215.

Moreover, it is unreasonable to assume that on a sustained basis public employers, as defined in the Initiative Petitions, would be able to maintain dramatically lower wage levels than private businesses. Public employers would lose staff employable at higher rates in the private market, imposing substantial costs on government productivity. Using the method traditionally employed by labor economists and followed by the Auditor's office, one can calculate the annual

wage costs to state and local governmental entities, based on the annual wage cost for each state and local government worker in the ORG CPS, as detailed on page 6 of Dr. Macpherson's 2012 report, attached hereto as **Exhibit A**. Even if the auditor finds that a specific estimate of costs is not determinable, the auditor should note that state and local government "operating costs could increase by an unknown annual amount that could be significant," through the form of higher wage costs and higher contracting costs.

The proponents of the Initiative Petitions may argue that the Auditor should abandon any state and local cost estimates altogether. The proponents will argue that provisions they have inserted in the statute would mean that state and local government entities will not have to pay higher wages to their employees. Setting aside unjustifiable discrimination against private employers (and "public employees"), the provision is of uncertain legal effect and constitutionality. A "public employer," defined in the initiatives as "the state or a political subdivision of the state" still incurs substantial costs for wages of individuals that are "private employees," rather than "public employees." Cleaning services, food service, and other essential services often rely on state contracts with outside vendors. Sometimes, a contract rate may vary depending on the cost of labor. Even if the contract rate is fixed, it must be re-bid periodically, and that bidding process would take into account the new minimum wage. Plainly, the initiative would impose higher costs for state and local governments in contracting with any private entity and its employees. As a matter of law, it would be insufficient and unfair for the Auditor's fiscal note or summary to simply assume that these costs to state and local governmental entities do not exist.

2. Cost of Unemployment Benefits

a) The effect of inflation on Missouri's minimum wage

CPS–ORG data show that between 2007 and 2015, median nominal wages for adult (25–59 years old) workers in the U.S. grew by 1.68 percent a year. However, Missouri's minimum wage is currently adjusted using "the percentage increase or decrease as of the preceding July over the level as of July of the immediately preceding year of the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W)." Section 290.502, RSMo. Coincidentally (or perhaps not), the CPI-W, over the period from 2006 to 2016, also increased at an average rate of 1.68 percent a year.

Year	CPI-W	Observed inflation %
2006	199.2	
2007	203.7	0.022590361
2008	216.304	0.061875307
2009	210.526	-0.0267124

2010	213.898	0.016017024
2011	222.686	0.041085003
2012	225.568	0.01294199
2013	230.084	0.02002057
2014	234.525	0.019301646
2015	233.806	-0.00306577
2016	234.771	0.004127353

Using Missouri's current inflation-adjusted minimum wage rate and an assumed, constant 1.68 percent increase in the CPI-W, the minimum wage in Missouri will be as follows:

Year	Estimated Minimum Wage
2016	$7.65 (observed)
2017	$7.70 (observed)
2018	$7.85
2019	$8.00
2020	$8.15
2021	$8.30
2022	$8.45
2023	$8.60
2024	$8.75
2025	$8.90
2026	$9.05

b) Calculating job loss attributable to increased minimum wage

At least one outside economist, James Sherk, has already provided an estimate for job loss in Missouri based on a $15 minimum wage. Mr. Sherk calculated the effect of a $15 minimum wage implemented in 2021. Mr. Sherk's figures accounted for inflation by estimating the present value of $15.00 in 2021, rather than estimating an absolute figure for wage inflation in Missouri. Mr. Sherk calculated the present value of $15.00 in 2021 to be $13.57, per hour, based on wage inflation of 1.68 percent. Mr. Sherk evaluated the change from $7.65 per hour to $13.57 per hour (a 77.39% increase), exclusive of agricultural workers. Cumulatively, Mr. Sherk calculated this 77.39 percent increase in wages to reduce employment in the affected workforce by (0.7739*0.677) 52.39%.

Graves Garrett LLC

Mr. Sherk calculated that approximately 40.9% of Missouri's Wage and Salary Workers would be affected by such a $15 minimum wage. Mr. Sherk's calculations reveal that a $15 minimum wage in 2021 would be expected to reduce the number of full-time equivalent jobs in Missouri by approximately 218,000. Based on CPS–ORG data, these figures reveal an affected workforce of approximately 416,086 workers impacted by a $15 minimum wage increase in 2021.

However, in 2014, Dr. Macpherson found, using more conservative, national-level Congressional Budget Office data, that an increase to a $10.10 minimum wage, effective January 1, 2015, would eliminate about 15,700 jobs in Missouri. Dr. Macpherson analyzed the effect of a Missouri $10.10 minimum wage using a model suitable to a national analysis. This analysis predicted a loss of 15,700 Missouri jobs based on a wage increase from $7.50 in 2014 to $10.10 in 2015 (a 34.67% increase).

On the whole, the analysis by Mr. Sherk is more instructive here, since it is more recent, Missouri-specific, and anticipates larger wage changes contemplated by the Initiative Petitions. The most accurate way to determine the estimate of Workers Affected would be to analyze the CPS–ORG data. However, without such data readily available in the time constraints imposed by the fiscal note process, it is reasonable for estimation purposes to assume Mr. Sherk's figures are evenly distributed. Assuming that worker data follows an equal distribution, the Initiative Petitions would be expected to result in the following job losses:

Year of final prescribed wage increase	Wage without IP	Wage mandated by IP	Percentage increase	Percentage of affected workers who lose jobs (Percentage Increase x 0.677 Elasticity)	Estimate of Workers Affected	Estimate of Missouri Workers Unemployed by Initiative
2021	$8.30	$11.00	32.53%	22.02%	174,897	38,512
2022	$8.45	$11.00	30.18%	20.43%	162,262	33,150
2022	$8.45	$12.00	42.01%	28.44%	225,866	64,236
2023	$8.60	$12.00	39.53%	26.77%	212,532	56,895
2023	$8.60	$13.00	51.16%	34.64%	275,061	95,281
2024	$8.75	$12.00	37.14%	25.15%	199,683	50,220
2024	$8.75	$13.00	48.57%	32.88%	261,136	85,861
2025	$8.90	$13.00	46.07%	31.19%	247,695	77,256
2026	$9.05	$13.00	43.65%	29.55%	234,683	69,349

c) The best estimate for a price elasticity of demand for low-skilled labor is -0.677.

As noted by Mr. Sherk, starting wages of $15.00 per hour mean that full-time employee must create at least $38,700 a year in value for his or her employer (including wages, employer payroll taxes, and mandatory healthcare benefits). High minimum wages and mandatory benefit costs make it much harder for less-experienced and less-skilled workers to find jobs, particularly full-time work.

Recent labor economics scholarship has revealed that, accounting for publication bias, a state-specific elasticity of demand for less-skilled workers is, on average, approximately -0.677, though some estimates are even higher, around -1.0.[1] "[E]conomists have extensively studied how businesses respond to higher wages overall, not just minimum-wage increases. On average these studies find a 10 percent increase in labor costs causes firms to reduce employment of less-skilled workers by 6.8 percent in the long run."[2]

While these elasticity estimates are substantial in absolute terms, there is reason to believe that such estimates might still understate the impact of a Missouri state-specific effort to increase the minimum wage. This is so for several reasons. First, traditionally, labor economists view labor as a reasonably difficult input to substitute; however, Missouri businesses have readily available options. There are relatively few barriers to doing business in Missouri's border states, and businesses can easily relocate across a state line to take advantage of more favorable wage (and tax laws). Additionally, substantially raising the cost for Missouri labor, relative to labor sources in other states and other countries, is likely to force many manufacturing jobs in Missouri to disappear entirely. Automation is also a significant risk. The substitution of labor is becoming increasingly easy due to technology advancements and the "sharing" economy, where fewer individuals are "employees" covered by the minimum wage. Finally, a labor "price shock" may result in significant decreases in the demand for goods and services. People make behavioral changes to avoid higher costs, including eating out less often and generally decreasing consumption (or shifting their activities to consumption involving comparatively low amounts of labor) wherever possible.

[1] Sherk, James, "How $15-per-Hour Minimum Starting Wages Would Affect Each State," The Heritage Foundation, http://report.heritage.org/ib4601.

[2] "The coefficients on these estimates imply an elasticity of –0.677 for a study published in 2012 (the most recent year in their data) of long-run unconditional labor demand for low-skilled labor in the U.S., estimated using industry-level administrative panel data and a structural form model." "Estimates that do not account for publication bias tend to slow a long-run elasticity closer to –1.0. See, for example, George Borjas, Labor Economics, 6th ed. (Columbus, OH: McGraw-Hill, 2013), Chapter 4: 'The evidence also suggests that the estimates of the long-run labor demand elasticity cluster around –1, so the long-run labor demand curve is indeed more elastic than the short-run curve.' " Sherk, available at http://report.heritage.org/ib4601.

Graves Garrett LLC

d) Unemployment Benefit Costs

We derived an average unemployment payout by calculating the expected weekly unemployment benefit amount. Based on current data, the expected unemployment weekly benefit amount of a worker making $7.65 an hour, on a 40 hour workweek, is $159.12 per week, for 20 weeks.[3] The expected unemployment weekly benefit amount of a worker making $10.99 an hour is $228.59 per week. The expected unemployment weekly benefit amount of a worker making $11.99 an hour is $249.39 per week. The expected unemployment weekly benefit amount of a worker making $12.99 an hour is $270.19 per week. We assume that workers will seek unemployment insurance for the full twenty weeks authorized under Missouri law, because unemployment attributable to an increase in the minimum wage is structural. In this case, structural unemployment occurs because workers' job skills do not meet the established "price floor" of labor, rendering the worker's skills unmarketable. Assuming an even distribution of workers affected, the average unemployment benefit cost to the state for a worker is calculated as follows:

- For Initiative Petitions 2018-213 through 2018-216, [($159.12+$228.59)/2]*20 = $3,877.10
- For Initiative Petitions 2018-196, 2018-197, 2018-200, 2018-202, and 2018-204 through 209, [($159.12+$249.39)/2]*20 = $4,085.10
- For Initiative Petitions 2018-198, 2018-199, 2018-201, 2018-203, 2018-210 through 2018-212, [($159.12+$270.19)/2]*20 = $4,293.10

Consistent with Dr. Macpherson's 2012 report, it would be reasonable for the Auditor to assume that 35% of unemployed workers will receive unemployment benefits. Combining these numbers leads to the following estimates:

Year of final prescribed wage increase	Estimate of Missouri Workers Unemployed by Initiative	Estimated Unemployment Amount Per Worker	Estimated Total Unemployment Premiums Paid	Average Annual Unemployment Premiums Paid by State
2021 ($11)	38,512	3,877.10	$52,260,206.32	$17,420,068.77
2022 ($11)	33,150	3,877.10	$44,984,052.75	$11,246,013.19
2022 ($12)	64,236	4,085.10	$91,843,669.26	$22,960,917.32
2023 ($12)	56,895	4,085.10	$81,347,617.58	$20,336,904.39

[3] https://labor.mo.gov/DES/Claims/calculator. A 2015 law decreased the unemployment benefit period from 20 weeks to 13 weeks, but the Supreme Court of Missouri struck down the law in July 2016.

2023 ($13)	95,281	4,293.10	$143,167,801.39	$28,633,560.28
2024 ($12)	50,220	4,085.10	$71,803,802.70	$11,967,300.45
2024 ($13)	85,861	4,293.10	$129,013,450.69	$21,502,241.78
2025 ($13)	77,256	4,293.10	$116,083,706.76	$16,583,386.68
2026 ($13)	69,349	4,293.10	$104,202,767.17	$13,025,345.90

3. Impact on State Income Tax Revenue

The 2012 analysis prepared by Dr. Macpherson may also be used as a reference in calculating the effect of the initiative petitions on state income tax revenue. Here, again, it is reasonable to assume that our "affected workers" are evenly distributed, though precise CPS–ORG data would also provide a reliable estimate. Here, the increased income tax revenue is the additional income tax paid by workers whose wages increase. There is a loss of revenue, however, in the form of decreased income tax paid by workers whose wages decrease and businesses who absorb the increased cost of labor, rather than passing it along to customers.

For the purposes of these estimates, we assume that workers work 40 hours a week and 52 weeks per year:

Year of final prescribed wage increase	Estimate of Workers Affected	Estimate of Missouri Workers Unemployed by IP	Estimate of Missouri Workers with Increased Wages	Annual Increase in Wages Paid to Workers who get Wage Increase in Final Year	Annual Decrease in Wages Paid to Workers now Unemployed
2021 ($11)	174,897	38,512	136,385	$382,969,080.00	$108,141,696.00

2022 ($11)	162,262	33,150	129,112	$342,405,024.00	$87,913,800.00
2022 ($12)	225,866	64,236	161,630	$596,737,960.00	$237,159,312.00
2023 ($12)	212,532	56,895	155,637	$550,332,432.00	$201,180,720.00
2023 ($13)	275,061	95,281	179,780	$822,673,280.00	$436,005,856.00
2024 ($12)	199,683	50,220	149,463	$505,184,940.00	$169,743,600.00
2024 ($13)	261,136	85,861	175,275	$774,715,500.00	$379,505,620.00
2025 ($13)	247,695	77,256	170,439	$726,750,021.03	$329,419,584.00
2026 ($13)	234,683	69,349	165,334	$679,192,072.00	$284,885,692.00

These net wage increases will lead to corresponding increases in state income tax collections. Traditionally, it has been assumed that about 50% of affected workers will pay 6% income tax, while the other 50% of workers pay no state income tax. This assumption may be less accurate at the higher wage increases contemplated by the Initiative Petitions. Accordingly, figures are also displayed assuming that about 75% of affected workers will pay 6% income tax, while the other 25% of workers pay no state income tax.

Annual Net Increase in Wages Paid To Workers	Annual Income Tax Increase from Wage Increase (50% pay tax)	Annual Income Tax Increase from Wage Increase (75% pay tax)
$274,827,384.00	$8,244,821.52	$12,367,232.28
$254,491,224.00	$7,634,736.72	$11,452,105.08
$359,578,648.00	$10,787,359.44	$16,181,039.16
$349,151,712.00	$10,474,551.36	$15,711,827.04
$386,667,424.00	$11,600,022.72	$17,400,034.08
$335,441,340.00	$10,063,240.20	$15,094,860.30
$395,209,880.00	$11,856,296.40	$17,784,444.60
$397,330,437.03	$11,919,913.11	$17,879,869.67
$394,306,380.00	$11,829,191.40	$17,743,787.10

Graves Garrett LLC

Based on these figures, Missouri businesses must also decide whether to pass along any increase in wage costs (wages and mandatory payments).[4]

Year of final prescribed wage increase	Annual Cost to Business from Increased Wage	Annual Decreased Corporate Income Tax if cost is fully absorbed	Annual Decreased Corporate Income Tax if cost is 50% absorbed
2021 ($11)	$412,266,214.62	$25,766,638.41	$12,883,319.21
2022 ($11)	$368,599,008.34	$23,037,438.02	$11,518,719.01
2022 ($12)	$642,388,413.94	$40,149,275.87	$20,074,637.94
2023 ($12)	$592,432,863.05	$37,027,053.94	$18,513,526.97
2023 ($13)	$885,607,785.92	$55,350,486.62	$27,675,243.31
2024 ($12)	$543,831,587.91	$33,989,474.24	$16,994,737.12
2024 ($13)	$833,981,235.80	$52,123,827.23	$26,061,913.62
2025 ($13)	$782,346,397.64	$48,896,649.85	$24,448,324.93
2026 ($13)	$731,150,265.50	$45,696,891.59	$22,848,445.80

Assuming businesses absorb half of the cost of increased wages, and 75 percent of affected workers pay the new, higher taxes, the effect on state income tax collections is estimated to be:

Year of final prescribed wage increase	Annual Net Income Tax Revenue Loss
2021 ($11)	($516,086.93)
2022 ($11)	($66,613.93)
2022 ($12)	($3,893,598.78)
2023 ($12)	($2,801,699.93)
2023 ($13)	($10,275,209.23)
2024 ($12)	($1,899,876.82)
2024 ($13)	($8,277,469.02)
2025 ($13)	($6,568,455.26)
2026 ($13)	($5,104,658.70)

[4] A healthcare benefit cost estimate is not available based on the time limitations imposed by this fiscal note.

Graves Garrett LLC

4. Sales tax revenue gain or loss

Projecting any increase in sales tax revenue resulting from an increased minimum wage would require the auditor's office to conclude, based on data separate and apart from the sheer conjecture typically offered by political activist groups: (1) the net effect on consumer disposable income and (2) the percentage of a consumer's disposable income that is spent on goods subject to the sales tax, taking into consideration that the scope of Missouri's sales tax has been truncated by a voter-approved constitutional amendment from November 2016.

Typically, the Auditor's office multiplies the total increase in worker earnings (which should be adjusted for employment reductions) and multiplies the result by 25 percent, then multiplying that figure by the Missouri the population weighted combined average state and local sales tax in Missouri, 7.81%.[5] Based on this estimate, the population-weighted combined average local sales tax is 3.585%.

However, it would be deceptive to fail to account for sales tax losses from workers whose wages are eliminated or sales tax losses from reduced business profits (attributable to the higher wages paid), which will lower spending by business owners. The first figure is calculable by determining the total annual wages (adjusted for employment deductions) for all workers who lose jobs due to a minimum wage hike, multiplied by 25 percent. The second number is calculable by multiplying the total increase in worker earnings (multiplied by 1.0765 to account for Social Security and Medicare taxes) by approximately 15 percent.[6]

Year of final prescribed wage increase	Annual Net Increase in Wages Paid To Workers	New Wages Spent on Sales Tax Items	Annual Cost to Business from Increased Wage	Annual Business Income No Longer Included in Sales Tax Base (50% passed-through)
2021 ($11)	$274,827,384	$68,706,846	$412,266,214.62	($61,839,932)
2022 ($11)	$254,491,224	$63,622,806	$368,599,008.34	($55,289,851)
2022 ($12)	$359,578,648	$89,894,662	$642,388,413.94	($96,358,262)
2023 ($12)	$349,151,712	$87,287,928	$592,432,863.05	($88,864,929)

[5] http://taxfoundation.org/sites/taxfoundation.org/files/docs/LOST--2015.png.
[6] This estimate would also need to be adjusted to reflect certain employers' mandate under the Affordable Care Act to provide healthcare coverage and pay 60 percent of such coverage.

2023 ($13)	$386,667,424	$96,666,856	$885,607,785.92	($132,841,168)
2024 ($12)	$335,441,340	$83,860,335	$543,831,587.91	($81,574,738)
2024 ($13)	$395,209,880	$98,802,470	$833,981,235.75	($125,097,185)
2025 ($13)	$397,330,437	$99,332,609	$782,346,397.64	($117,351,960)
2026 ($13)	$394,306,380	$98,576,595	$731,150,265.51	($109,672,540)

Accordingly, the annual estimations of the effects on state and local revenue, and total state economic impact are as follows:

Year of final prescribed wage increase	Annual Net Income Tax Revenue Loss	Annual Net Effect on State Sales Tax	Total Annual Effect on State Tax Revenue	Total Net Loss to State Government from Taxes and Unemployment Insurance	Annual Net Effect on Local Sales Tax
2021 ($11)	($516,086.93)	$290,127.11	($225,959.82)	($17,646,028.59)	$246,178.86
2022 ($11)	($66,613.93)	$352,067.34	$285,453.41	($10,960,559.78)	$298,736.43
2022 ($12)	($3,893,598.78)	($273,087.10)	($4,166,685.88)	($27,127,603.19)	($231,720.06)
2023 ($12)	($2,801,699.93)	($66,628.31)	($2,868,328.24)	($23,205,232.64)	($56,535.50)
2023 ($13)	($10,275,209.23)	($1,528,364.68)	($11,803,573.91)	($40,437,134.18)	($1,296,849.08)
2024 ($12)	($1,899,876.82)	$96,566.47	($1,803,310.36)	($13,770,610.81)	$81,938.65
2024 ($13)	($8,277,469.02)	($1,110,951.72)	($9,388,420.74)	($30,890,662.52)	($942,665.55)
2025 ($13)	($6,136,139.31)	($761,317.55)	($6,897,456.87)	($23,480,843.55)	($645,993.71)
2026 ($13)	($5,104,658.70)	($468,803.67)	($5,573,462.37)	($18,598,808.26)	($397,789.62)

5. Damage to small business

Additionally, any proponent or opponent fiscal note submission is required, pursuant to Missouri law, to state the impact of the initiative on small businesses. According to analysis by the Employment Policies Institute, 40 percent of the minimum wage workforce is employed at businesses with fewer than 50 employees. [7] The impact on extra costs to small business may be more significant than even this 40% figure suggests. Small businesses are more easily shut down by input price increases than large businesses, which have greater access to capital to weather the

[7] https://www.epionline.org/oped/who-really-employs-minimum-wage-workers/

storm. Clearly, small businesses that do not shut down due to increases in the minimum wage will pay higher costs, estimated at about 40% of business' total increased costs, described above.

Conclusion

In conclusion, the State Auditor should attempt to quantify the increased cost to be borne by state and local government entities through increased contracting costs as a result of an increase to the minimum wage. This direct cost is outlined in Section 1.

Indirect costs are outlined in Sections 2 through 5, and show a net loss. Although such second-order effects more difficult to predict, a net loss is easily the most likely outcome. Significantly, this result is only obtainable if the Auditor reviews both the "credit" and "debit" sides of the transfer of wealth from businesses to workers. The Auditor should refrain from taking the proponents' likely invitation to consider and present only the "credit," side, and should attempt to provide a complete picture of all effects of a minimum wage increase, including the loss of revenue to state and local governments from individuals who lose employment. Only conveying (or quantifying) the potential for gain, without fairly conveying the likelihood of net loss, would be deceptive and unfair.

The State Auditor's previous 2018 fiscal notes are a good model. Each of the fiscal notes for the Initiative Petitions should follow the already-established format and state that:

> "[O]perating costs could increase by an unknown annual amount that could be significant. State and local government tax revenue could change by an unknown annual amount ranging from a $## million decrease to a $## million increase depending on business decisions."

Should you desire further detail or have any questions about this fiscal impact statement, please do not hesitate to contact me.

Sincerely,

Edward D. Greim

ABOUT THE MISSOURI RESTAURANT ASSOCIATION

With origins dating back to 1916, the Missouri Restaurant Association (MRA) is a statewide trade association representing over 1,500 member establishments. The association's membership is diverse, and includes full service, fast casual, and quick service restaurants, cafeterias, hotels, schools, institutions, contract feeders, and ancillary foodservice providers such as theme parks. The association has been successful in securing support from virtually every segment of the foodservice and hospitality industry.

MRA includes seven chapters as extensions of the parent organization, each with its own Officers, Board of Directors, and limited budget. The association is governed by a Board of Directors comprised of five Officers, 33 Directors, and each President of the seven affiliated chapters.

MRA is dedicated to serving the needs of the foodservice and hospitality industry, enhancing and improving its growth and development, assisting and educating its members in operating more effectively, improving the political and social environment in which the industry conducts business, for the benefit of its members, patrons, employees, and the well-being of the community.

David A. Macpherson is the E.M. Stevens Professor of Economics at Trinity University. He received undergraduate and doctoral degrees in economics from Pennsylvania State University.

Dr. Macpherson has published over 60 articles in leading economics and real estate journals including Review of Economics and Statistics, Industrial and Labor Relations Review, Journal of Labor Economics, Journal of Human Resources, and Journal of Real Estate Economics and Finance. His research has been funded by a variety of entities including the National Science Foundation, Florida Legislature, and the National Association of Realtors. He is co-author of the undergraduate labor economics text, Contemporary Labor Economics, as well as the principles of economics text, Economics: Private and Public Choice. He is included in Who's Who in Economics, Fourth Edition, which includes the 1,200 most frequently cited economists.

THE IMPACT OF A $10.10 MINIMUM WAGE ON JOBS AND TAXPAYER COSTS IN MISSOURI

June 2014

Economic Analysis by **Dr. David Macpherson**
Trinity University

Index

Executive Summary 4
Results 5
Technical Appendix 7

EXECUTIVE SUMMARY

Missouri's minimum wage of $7.50 is linked to rise in most years with the inflation rate. But some state legislators and labor unions would like to raise that figure even higher. For instance, a recent labor union-organized bus tour in the state promoted a $10.10 minimum wage in St. Louis.

Proponents have enthusiastically pointed to the benefits of the $10.10 policy. But there's been far less discussion of the costs involved with a $10.10-an-hour minimum wage—both the cost on employment, and the cost to taxpayers.

In this study, labor economist David Macpherson of Trinity University uses Census Bureau data to estimate the impact on Missouri's labor market and budget from raising the minimum wage to $10.10 an hour. He also provides separate results for the St. Louis metropolitan area.

Dr. Macpherson's employment estimates follow the methodology used by the nonpartisan Congressional Budget Office in its report earlier this year estimating the impact of a $10.10 minimum wage nationwide, which in turn relied on 60 different empirical studies to formulate its estimates.

Statewide, he finds that over 15,000 jobs would be lost at the $10.10 wage level—with 9,300 of those jobs being held by women. In the St. Louis metropolitan area, approximately 4,800 jobs would be lost from a $10.10 minimum wage.

The cost to taxpayers would be significant: There are approximately 40,000 state and local employees whose wages would be affected by the $10.10 increase in Missouri, for a combined cost to taxpayers of $87 million annually.

Raising wages is an admirable goal, but the evidence suggests that accomplishing this goal with a blunt wage mandate could do more harm than good.

RESULTS

The minimum wage is one of the most hotly-debated topics in the political world. Some legislators claim that a higher base wage will stimulate the economy; others claim that it will reduce jobs when affected employers can't offset the higher costs through higher prices.

Economists, who have studied the issue since the late 1940s, tend to take a skeptical view of minimum wage increases. Since the early 1990s, for instance, roughly 85 percent of the most credible research on the minimum wage points to job loss for less-skilled groups. The nonpartisan Congressional Budget Office (CBO), in an evaluation of President Obama's proposed $10.10 minimum wage increase, reviewed 60 different studies and concluded that the policy would eliminate 500,000 jobs if enacted.

The estimates that follow, of the employment impact of a higher minimum wage on Missouri's labor market, were performed by Dr. David Macpherson of Trinity University. Dr. Macpherson followed closely the methodology used by the CBO in its 2014 report. Dr. Macpherson also estimates the taxpayer costs of a higher minimum wage, as many state and local public employees will see their earnings increase when the minimum wage rises.

Dr. Macpherson's methodology is presented in detail in a technical appendix.

Estimated Employment Effects of a $10.10 Minimum Wage in Missouri

Statewide, Dr. Macpherson finds that increasing the minimum wage to $10.10 would eliminate over 15,000 jobs—approximately 60 percent of which are jobs held by women. The bulk of the job losses would be concentrated among individuals with a high school degree or less, and among people who work in the retail or leisure & hospitality industries.

(Note: Totals have slight discrepancies due to rounding.)

City-Specific Minimum Wage Employment Impacts

The city of St. Louis has been the subject of a number of protests calling for a higher minimum wage. Dr. Macpherson analyzed the employment impact of a $10.10 minimum wage in the St. Louis metropolitan area, providing breakouts by gender and education where the data permits. He estimates that the wage hike would eliminate approximately 5,000 jobs—just over half of which would be jobs held by women.

RESULTS CONTINUED

Missouri Taxpayer Costs of a $10.10 Minimum Wage

Dr. Macpherson estimates that approximately forty thousand state & local public employees would be affected by a minimum wage increase to $10.10 an hour. These additional wage costs translate to new costs for state and local taxpayers. Following the methodology described in detail in the technical appendix, Dr. Macpherson estimates both the straight wage cost of a $10.10 minimum wage, as well as the total compensation cost with Social Security, Medicare, workers compensation, and unemployment insurance included. Statewide, taxpayers would shoulder an additional $87 million in costs if the base wage was increased to $10.10 an hour and public employees were covered by the new wage.

Missouri Taxpayer Costs of a $10.10 Minimum Wage	
# of State & Local Workers	304,588
# Affected By $10.10 MW	40,103
Annual Wage Cost	$79,629,374
Annual Compensation Cost	$87,004,355

Note: Annual compensation costs include the cost of worker's compensation, FICA, and unemployment insurance benefits.

TECHNICAL APPENDIX

Estimating Employment Loss and the Cost to State and Local Government of an Increase in the Minimum Wage

Dr. David Macpherson
E.M. Stevens Professor of Economics
Trinity University

This paper describes how we estimate the employment loss and the cost to state and local governments of a proposed increase in the minimum wage effective on January 1, 2015.

Data and Sample

First, we use data from the Current Population Survey (CPS) Outgoing Rotation Groups (ORG) from January 2011 through December 2013. For each worker in the sample, we calculate their wage rate. We also adjust the wage rate to reflect a forecast of wages in 2015. This is done in two steps. First, based on legislation enacted as of April 2014, we estimate the minimum wage that would be in effect in January 2015 for each state and city that we consider. If a state or city has an indexed minimum wage, we increase the January 2014 state or city minimum wage by the Congressional Budget Office (CBO) inflation forecast for 2014 of 1.7%.

Since we use data from 2011 through 2013, we also follow the CBO approach for forecasting what the wage distribution would be in 2015. This is done in two steps. First, we adjust wages observed prior to 2013 to reflect 2013 minimum wage legislation. For example, if the minimum wage in a state was $7.25 in 2011 and grew to $8.00 by 2013, anyone who earned between $7.25 and $8.00 in 2011 would have their wage increased to $8.00. After wages are adjusted to 2013 levels, we assume that all wages grow by 2.9% in 2014. Using the resulting 2015 distribution of wages, we adjust for minimum wage legislation that would increase the minimum between 2013 and 2015. Anyone earning a wage between the 2013 and 2015 minimum wage is assigned a wage matching the 2015 minimum wage.

After generating the forecast 2015 distribution of wages reflecting wage growth and existing minimum wage legislation, we identify workers who would be affected by additional changes to the 2015 minimum wage as those with wages between the predicted minimum wage legislated for 2015 (or up to $.25 below it) and the proposed minimum.

To estimate the number of affected workers, we take two steps. First, for each state, we estimate the number of affected workers for 2013. Second, we adjust the weights in the 2011 and 2012 data so that the state-specific number of affected workers implied by the 2011 and 2012 data matches that for 2013. This adjustment is designed to correct for the changing economic climate as the economy recovers from the great recession and to generate estimates that are as close as possible to the most recent data (2013). After we adjust the 2011 and 2012 weights, we estimate the number of affected workers by summing their earnings weights and dividing the total by 36 (the number of months of data).

[1] Also, following CBO, anyone earning up to $.25 less than the 2011 minimum wage would have their wage increased by the amount that the minimum wage increased (i.e. a $7.00 wage would be increased to $7.75 in this example). This approach is used to adjust for the fact that many workers round their answers when asked about their wage.

TECHINCAL APPENDIX CONTINUED

Employment Loss

To estimate employment loss, for each affected worker we compute:

L = e *(Proposed Min Wage /Min Wage 2015 – 1)

where e is an assumed elasticity of employment with respect to changes in the minimum wage, Min Wage 2015 is the minimum wage currently legislated for 2015, and Proposed Min Wage is the minimum wage that is being proposed for 2015. Thus, for example, if a worker is projected to earn the federal minimum of $7.25 in 2015, the expected reduction in employment resulting from a $10.10 minimum wage in 2015 if e=.45 is .45*(10.10/7.25 – 1) = .18. That is, for every 100 workers currently earning the federal minimum, the expectation is that 18 would lose a job if the minimum wage elasticity is .45.

To estimate the aggregate employment loss in the economy, we use earnings weights to sum L across workers. We also follow the Congressional Budget Office (2014) and use an elasticity of 0.15 for non-teenagers and 0.45 for teenagers.

Cost to State and Local Government

We use the same data to estimate the cost to state and local government of a proposed minimum wage hike. We apply the same definition of affected workers described above and estimate the number of state and local government workers affected by a minimum wage hike. We do not, however, assume that there is any job loss for state and local workers as we do not have an appropriate elasticity estimate specific to state and local workers. To the extent that state or local governments reduce hours or employment in response tothe minimum wage hike, our estimate of the cost of the hike would be overstated.

To estimate the increase in annual payroll cost resulting from an increase in the minimum wage, we estimate the increase in annual cost for each worker as:

(Proposed Min Wage-Min Wage 2015)*weekly hours*52

We then multiply the increase in annual cost by the earnings weight for each worker and sum across workers. Since an increase in wages also requires increased employer contributions for Social Security, Medicare, workers' compensation and unemployment insurance, we apply an estimate of the payroll tax rate for these mandatory programs to calculate the additional cost for these programs.

For each state and city considered, we provide tables summarizing the number of affected workers, employment loss, and the distribution of employment loss by sex, education, race, age and industry. Given that we use three years of data, a rule of thumb for minimum sample size required to achieve a reasonably accurate estimate of the employment loss is to require at least 30,000 people be in the relevant category. For example, if there are fewer than 30,000 people projected to be in a particular industry category, the Bureau of Labor Statistics would not report the estimate due to a lack of reliability based on the variance of the estimate relative to its mean.

In addition to the estimate of employment loss, for each state or city considered, we estimate the number of state and local workers that would be affected by the minimum wage hike and the total annual cost to government in terms of wages and total compensation. As with the employment estimates, we advise caution in interpreting estimates that are based on fewer than 30,000 affected workers.

[3] Congressional Budget Office, "The Effects of a Minimum-Wage Increase on Employment and Family Income," February 2014.

[4] For workers paid by the hour the reported hourly wage was used. For workers who are not paid by the hour, we calculate the hourly wage by dividing usual weekly earnings by usual weekly hours. Overtime pay was calculated as time and one-half for hours above 40 hours for hourly workers.

[5] The assumed payroll tax for Medicare and Social Security is 7.65 percent. To estimate the payroll tax for workers' compensation and unemployment insurance, we use unpublished data from the 2010 Employer Cost of Employee Compensation database for state and local workers in the relevant region in 2010.

FISCAL ANALYSIS
OF
PROPOSED STATUTORY INITIATIVE PETITIONS 2012-084 AND 2012-085

Prepared for

Victor Allred versus Robin Carnahan and Thomas Schweich
Circuit Court of Cole County, Missouri

FISCAL ANALYSIS
OF
PROPOSED STATUTORY INITIATIVE PETITIONS 2012-084 AND 2012-085

I. Introduction

This report was undertaken at the request of counsel representing plaintiffs in the case of Victor Allred versus Robin Carnahan and Thomas Schweich. As part of the basis of the lawsuit, the plaintiffs allege that the fiscal note summaries for proposed statutory initiative petitions 2012-084 and 2012-085 are insufficient and unfair. I was asked by counsel to evaluate the fiscal impact of proposed statutory initiative petitions 2012-084 and 2012-085.

The results of my analysis indicate:

(1) labor costs to state and local government entities, based on state auditor fiscal notes, will rise by more than $1,352,182. A more inclusive estimate indicates that state and local government labor costs will increase by $16,003,712;

(2) unemployment benefit costs will rise by $4,397,510 during the first year of the minimum wage increase;

(3) individual income tax revenue will rise by at most $4,078,088;

(4) the loss in corporate income tax revenue could be as high as $9,243,105;

(5) state and local sales tax revenue will rise by at most $2,919,327;

(6) during the first year: state and local governments will incur increased costs of $20,401,222; the change in state and local government revenue will

range from -$2,245,690 to +$6,997,415; and the net state and local government fiscal impact will range from -$22,646,912 to -$13,403,807.

The report is organized as follows. My qualifications to prepare this report are contained in Section II. Section III describes the data and records I relied upon for this report. Section IV reviews the estimated fiscal impact of proposed statutory initiative petitions 2012-084 and 2012-085. A summary and my conclusions are provided in Section VI.

II. Qualifications

I am currently the E.M. Stevens Professor of Economics at Trinity University in San Antonio, Texas. Previously, I was employed by Florida State University as Director of the Pepper Institute on Aging and Public Policy and the Rod and Hope Brim Eminent Scholar in Economics. I have taught both undergraduate and graduate Econometrics (statistical analysis of economic data), and Labor Economics. I have published over 50 articles in peer-reviewed professional journals.

I am currently serving on the editorial board of the *Journal of Forensic Economics*, which is a peer-reviewed journal. I have also served as a reviewer or 'referee' for 24 peer-reviewed journals, including the *Journal of Human Resources, Journal of Labor Economics, Quarterly Journal of Economics,* and the *Review of Economics and Statistics*. Based upon these experiences, I am very familiar with the scholarly and professional research process and the concept of peer review.

I have prepared numerous analyses and reports that use statistical methods as applied to specific questions. I have been responsible for developing the techniques and approaches required for these analyses. I routinely use computers and statistical software packages to assist me in my analytical work. I have been qualified as an expert witness on statistical analysis of employment discrimination and economic damages in state courts in Florida and Georgia and Federal Courts, and I have given expert testimony. I have prepared analyses and offered testimony on behalf of both plaintiffs and defendants.

Details of my qualifications are reflected in my current resume and legal cases, attached as Appendix A to the report.

III. Data and Records

I reviewed the following materials in preparing this report.

- Plaintiff's Complaint
- Material cited in footnotes below.

IV. Fiscal Impact

A. Overview

The proposed statutory initiative petitions 2012-084 and 2012-085 contain many elements in common. Both initiatives would increase the Missouri minimum wage to $8.25 per hour, alter the exemption for retail and service firms, raise the cash wage of tipped workers from 50% to 60% of the minimum wage, and increase the statute of limitation from two to three year for underpayment claims.

The initiatives differ in their linkage to the federal minimum wage. Initiative petition 2012-084 requires that the state minimum wage be automatically increased to the

federal minimum wage if it is higher than the state minimum wage. Initiative petition 2012-085 does not have such a linkage. It only requires that workers be paid the higher of the state minimum wage or the federal minimum wage. The linkage to the federal minimum wage will cause the state minimum wage to be higher under initiative petition 2012-084 over time. This is because the state minimum wage, in contrast to the federal minimum wage, is adjusted for inflation as measured by the Consumer Price Index.

An increase in the minimum wage in Missouri will affect state and local government entities in two ways. First, it will directly increase the cost of labor to state and local government entities. This will occur due to the increase in wages of state and local government workers earning between the existing minimum wage of $7.25 and the new minimum wage of $8.25.[1] In addition, workers laid off due to the minimum wage increase can collect unemployment benefits. The state government will bear the cost of unemployment benefits of these workers for the first 20 weeks. Second, state and local government may gain increased revenue through higher income tax and sales taxes paid by workers affected by the minimum wage who remain employed. However, state and local government will suffer reduced tax revenue to the extent the higher wage cost lowers profits of businesses.

The following sections estimate the cost and revenue effects to state and local government entities of the proposed minimum wage increase.

[1] Information about the minimum wage in Missouri is available at http://www.labor.mo.gov/DLS/minimumwage/.

B. Direct Labor Cost Impact on State and Local Government Budgets

There are two possible ways to measure the direct labor cost on state and local government budgets. First, one can use the information included in the fiscal notes prepared by the State Auditor regarding the proposed initiatives. It is important to note that the fiscal notes provide an incomplete and thus too low estimate of the direct labor cost. The fiscal notes indicate that the Office of Administration's (OA) Division of Personnel reported that as of September 2011 there were 834 state workers who would be affected by an increase of the minimum wage to $8.25 and the "approximate annual cost" would be more than $540,000.

This OA estimate excludes seasonal workers such as State Fair employees, State Parks Employees, and tax season staff. The Division of Revenue noted its labor cost would rise by $40,000. The Division of Natural Resources stated they have over 500 workers who would be affected by the increase, but did not provide an estimate of the cost. The State Fair hired 745 workers that would be affected, but no cost estimate was provided.

Thus, the cost to state government, based on the fiscal notes, would be more than $580,000.

The fiscal notes also provide an incomplete and thus too low measure of the cost to local government and public educational institutions. Many cities and educational institutions did not respond to Office of Auditor's survey or provide an estimate of the cost of the higher minimum wage. The City of Columbia, City of Jefferson, City of

Joseph, Linn State Technical College, and Metropolitan Community College did provide such an estimate. The total cost to these five institutions is $772,182.

Based on the fiscal notes, the cost to state and local government entities of the increase in the minimum wage to $8.25 will be more than $1,352,182.

Second, data from the U.S. Census Bureau's Current Population Survey (CPS) can also be used to calculate the cost of the increased labor cost to state and local government entities in Missouri. Using the data from January 2010 to December 2011 Outgoing Rotation Group (ORG) CPS, I calculated that 17,089 state and local government workers would be affected by the minimum wage increase. I defined affected workers as those individuals earning between $7.00 and $8.24 per hour. Though the minimum wage was $7.25 per hour during this period, I also included those workers reporting earnings of $7.00 to $7.24 since some individuals may round their wage rate. I calculated the annual wage cost for each state and local government worker (i) in the ORG CPS as:

$$Annual\ Wage\ Cost_i = (\$8.25 - current\ wage_i) * weekly\ hours_i * 52.$$[2]

The average annual wage cost increase was $870. I summed the cost over each worker (i) to obtain the total wage cost to state and local government entities in Missouri of $14,866,430.

The increased wage cost is not the only labor cost to state and local government entities of the minimum wage increase. Employers are required to pay 7.65% of their wage costs in Social Security and Medicare taxes. Thus, the total labor cost of the minimum wage increase will be 1.0765 times $14,866,430 or $16,003,712.

---

[2] I assume that persons reporting an hourly wage rate between $7.00 and $7.24 are actually earning $7.25 per hour.

C. Unemployment Benefit Impact

The higher minimum wage will cause firms to reduce their level of employment.[3] As a result, the number of unemployed workers will increase. Thus, another important fiscal cost of the minimum wage increase is the cost of the unemployment insurance benefits for the workers laid off as a result of the minimum wage increase.

To calculate the cost to the unemployment benefits program, I first calculated the number of workers laid off. To do so, I calculated a probability of job loss for each affected Missouri worker (i) in the January 2010 to December 2011 ORG CPS:

$$Probability\ Job\ Loss_{\ i} = \frac{(\$8.25 - Current\ Wage_i)}{Current\ Wage_i} * elasticity_i.$$

I used the preferred employment elasticity (i.e., sensitivity of employment to wage changes) contained in Sabia and Burkhauser (2010), which was -0.6 for individuals aged 16 to 29 without a high school degree and -0.2 for all other individuals. The sole exception was for state and local government workers, where I assumed an elasticity of zero.[4] The sum across all affected workers yielded an estimated job loss of 5,745 jobs.

The next step was to calculate the weekly benefit for the average unemployed worker. Using the benefits calculator on the Missouri unemployment benefits web site and the wage income of average private-sector affected worker ($10,937), yields an average weekly benefit of $109.36[5]. The state of Missouri pays the first 20 weeks of benefits.[6] Thus, each eligible unemployed worker could receive a total of $2,187.20 in

---

[3] For a survey of research regarding the effect of the minimum wage on employment, see David Neumark and William L. Wascher, *Minimum Wages* (Cambridge, MA: MIT Press, 2008).
[4] Joseph J. Sabia and Richard V. Burkhauser, "Minimum Wages and Poverty: Will a $9.50 Federal Minimum Wage Really Help the Working Poor?" *Southern Economic Journal* (January 2010): 592-623.
[5] http://www.labor.mo.gov/DES/Claims/calculator.asp
[6] See http://www.labor.mo.gov/DES/Claims/

benefits paid for by the state of Missouri. These jobs are permanently eliminated and so it is appropriate to calculate the full amount of benefits for each worker.

Unemployment insurance, however, does not cover all unemployed workers. For example, it does not cover people who leave a job voluntarily, people looking for their first job, and re-entrants who previously left the labor force voluntarily. Furthermore, some individuals don't apply for benefits even though they are eligible. I assume that 35% of the unemployed workers will receive unemployment benefits based on analysis by Wenger (2001).[7]

The last step is to calculate the total cost to the Missouri unemployment benefits program. This done by multiplying the number of jobs lost (5,745) times the average benefit amount ($2,187.20) times the percent of unemployed individuals collecting benefits (35%). This calculation yields a figure of $4,397,510. This cost would be borne only during the first year of the minimum wage increase. The inflation adjustments in the minimum wage will also yield costs to the unemployment insurance program, but it is not possible to estimate the amount.

D. Impact on State Income Tax Revenue

The state of Missouri will gain increased revenue through higher income tax taxes paid by workers affected by the minimum wage who remain employed. However, it will

[7] Jeffery Wenger. "Divided We Fall: Deserving Workers Slip through America's Patchwork Unemployment Insurance System." *Economic Policy Institute*, 2001. Sabia and Burkhauser (2010) make the same assumption in their calculation of the amount of unemployment benefits generated by a minimum wage increase.

suffer reduced corporate income tax revenue to the extent the higher wage cost lowers profits of businesses.

To calculate the impact on individual income tax revenue, I again used data from January 2010 to December 2011 ORG CPS. I defined affected workers as those Missouri individuals earning between $7.00 and $8.24 per hour.[8] I used the following formula to estimate the change in income tax revenue:

$$\Delta Tax\ Revenue_i = (Tax_After_i - Tax_Before_i) - Prob_Job_Loss_i * Tax_Before_i,$$

where Tax_After_i is the income tax paid by worker i after the minimum wage increase. Tax_Before_i is the income tax paid by worker i after the minimum wage increase, and $Prob_Job_Loss_i$ is the probability of job loss for worker i. The first term shows the change in individual income tax revenue assuming no job loss and the second term shows the loss in tax revenue due to the employment loss caused by the minimum wage increase.

The income tax calculations were based on two assumptions.[9] First, the 50% percent of affected workers who were under the age 25 who were assumed to be dependents on another person's tax return. As a result, it was assumed that the affected workers' earnings were taxable at the maximum Missouri income tax rate of 6% both and after the minimum wage increase.[10] Second, all persons age 25 and older were assumed to be paying little or no income tax after exemptions and deductions. Thus, about 50% of the earnings increase will be taxed at a rate of 6%.

---

[8] I again assume that persons reporting an hourly wage rate between $7.00 and $7.24 are actually earning $7.25 per hour. The annual earnings level was calculated as the worker's wage rate times usual weekly hours worked times 52.

[9] The same assumptions are used in the State Auditor's fiscal notes for the initiatives.

[10] This assumption will overstate the revenue increase as 20% of affected workers under the age 25 are living by themselves and some of these individuals will not be a dependent on another person's tax return.

The tax calculations reveal an increase in income tax revenue increase to the state. Assuming no workers were laid off by the minimum wage increase, income tax revenue would rise by $6,043,534. However, the state will lose $1,965,446 in income tax revenue due to the lost earnings of private-sector workers no longer employed due to the minimum wage hike.[11] Thus, the net increase in individual income tax revenue is $4,078,088.

Businesses have three options to respond to the higher labor costs of a higher minimum wage. They can reduce their profits, raise prices, or lay off workers. Based on the 2010-2011 ORG CPS data, the minimum wage increase will raise private-sector labor costs by $192,620,900 if employment levels are not reduced. However, labor costs will be lowered by $55,240,790 due to the reduction in employment. Thus, labor costs will, on net, rise by $137,380,110. These increased labor costs may be either passed on to consumers through higher prices or reduced profits or more likely some combination of higher prices and reduced profits. Assuming that businesses absorbed all of the higher costs through reduced profits, the corporate income tax revenue would fall by the Missouri corporate income tax of 6.25% times the rise in labor costs of $137,380,110 * 1.0765 (to account for employer-paid Social Security and Medicare taxes) or $9,243,106.[12] Alternatively, if half of the higher labor costs were passed on to consumers, then corporate income tax revenue would fall by $4,621,553.

[11] The probability of job loss was calculated in the same manner as in the prior section.
[12] The corporate income tax for Missouri is available at: http://dor.mo.gov/business/corporate/

E. Impact on State and Local Sales Tax Revenue

To calculate the impact on state and local sales tax revenue the following approach was undertaken.[13] First, the total increase in worker earnings, adjusted for employment reductions, was calculated using the 2010-2011 ORG CPS. This figure was $152,246,540. Second, the increase in Missouri taxable sales was calculated as 25% of the earnings increase or $38,061,635. Third, the increase in sales tax revenue was calculated by multiplying the taxable sales change times the average state and local rate of 7.67% or $2,919,327.[14]

The higher minimum wage may decrease sales tax revenue to the extent that it reduces business profits, which will lower spending by business owners.

VI. Summary and Conclusions

I was asked by counsel to evaluate the fiscal impact of proposed statutory initiative petitions 2012-084 and 2012-085.

The results of my analysis indicate:

(1) labor costs to state and local government entities, based on state auditor fiscal notes, will rise by more than $1,352,182. A more inclusive estimate indicates that state and local government labor costs will increase by $16,003,712;

[13] The same general approach is used in the State Auditor's fiscal notes for the initiatives.
[14] The average rate comes from http://taxfoundation.org/news/show/27023.html

(2) unemployment benefit costs will rise by $4,397,510 during the first year of the minimum wage increase;

(3) individual income tax revenue will rise by at most $4,078,088;

(4) the loss in corporate income tax revenue could be as high as $9,243,105;

(5) state and local sales tax revenue will rise by at most $2,919,327;

(6) during the first year: state and local governments will incur increased costs of $20,401,222; the change in state and local government revenue will range from -$2,245,690 to +$6,997,415; and the net state and local government fiscal impact will range from -$22,646,912 to -$13,403,807.

University of South Carolina, 4/2000-11/2000, $10,000, "Minority Homeownership in South Carolina," with Stacy Sirmans.

Florida Department of Business and Professional Regulation, 3/1999-6/1999, $21,739, "Forecasting Housing Demand in Florida," with Stacy Sirmans.

University of South Carolina, 4/1999-11/1999, $10,000, "Forecasting Housing Demand in South Carolina," with Stacy Sirmans.

Florida State University, 6/1999-8/1999, $7,500, "Support for Preparing ECO 2000 as a Web-Based Course."

TIAA-CREF, 8/1998-8/1999, $23,000, "Determinants of Savings in Supplemental Pension Plans: A Case Study of Pension Choices in Higher Education," with Melissa Hardy and Larry Hazelrigg.

Florida Department of Business and Professional Regulation, 4/1998-6/1998, $16,638, "Forecasting Seniors' Demand for Housing in Florida," with Stacy Sirmans.

Florida Department of Business and Professional Regulation, 12/1997-6/1998, $18,472, "Housing Price Appreciation in Orlando and Tampa," with Stacy Sirmans.

Florida State University, 6/1998-8/1998, $7,500, "Support for Preparing ECO 2000 as a Web-Assisted Course."

Florida Department of Business and Professional Regulation, 3/1997-6/1997, $17,898, "Minority Homeownership in Florida," with Stacy Sirmans.

U.S. Department of Labor, Pension Welfare and Benefit Administration, 12/1996-8/1997, $20,000, "The Impact of Rising 401(k) Pension Coverage on Retirement Income," with William Even.

U.S. Department of Labor, Pension Welfare and Benefit Administration, 3/1996-6/1997, $15,000, "The Determinants of 401(k) Participation and Contribution Levels," with William Even.

Florida Department of Business and Professional Regulation, 4/1996-6/1996, $22,702, "Forecasting the Number of New Florida Real Estate Licensees," with Stacy Sirmans.

U.S. Department of Labor, Pension Welfare and Benefit Administration, 3/1995-6/1996, $15,000, "Explaining the Decline in Pension Coverage of Less Educated Workers," with William Even.

Florida State University COFRS Grant, 6/1994-8/1994, $8,000, "The Relative Compensation and Quality of Public and Private Sector Workers."

W.E. Upjohn Institute for Employment Research, 3/1994-12/1995, $35,000, "Pensions and Productivity," with Stuart Dorsey and Christopher Cornwell.

Florida Division of Workers' Compensation, 1/94-12/1995, $100,000, "Worker's Compensation Recipency in Union and Nonunion Workplaces," part of a service contract titled "Research Partnership with the Division of Workers' Compensation," co-investigator (one of several).

University of Wisconsin Institute for Research on Poverty Small Grant Program, 7/1993-6/1994, $15,000, "Racial Composition, Wages, and Quality Sorting," with Barry Hirsch.

U.S. Department of Labor, Pension Welfare and Benefit Administration, 7/1993-6/1993, $10,000, "Trends in Individual and Family Pension Coverage," with William Even.

U.S. Department of Labor, Pension Welfare and Benefit Administration, 6/1992-5/1993, $10,000, "The Pension Coverage of Young and Mature Workers," with William Even.

U.S. Department of Labor, Pension Welfare and Benefit Administration and American Society of Pension Actuaries, 6/1991-5/1992, $10,000, "A Conference on Current Pension Policy Issues," with William Even.

Miami University Faculty Research Grant, 6/1991-8/1991, $4,000, "Projected Growth in Retiree Health Insurance Liabilities."

Ohio Board of Regents Research Challenge Grant, 1/1990-12/1990, $4,980, "Proposal to Enhance the Data Library of the Center of Pension and Retirement Research," with William Even and Samuel Williamson.

Miami University Faculty Research Grant, 6/1990-8/1990, $4,000, "The Role of Firm Size in Pension Coverage and Options."

Miami University Faculty Research Grant, 6/1989-8/1989, $4,000, "Declining Unionism and the Gender Wage Gap," with William Even.

Participation in National Meetings

Panel Discussant, American Real Estate and Urban Economics Association/ASSA meetings, January 2008.

Presented, "Employee Turnover in the Long-Term Care Industry," at Academy Health Annual Research Meetings, June 2007.

Presented, "Participant Direction in Defined Contribution Pension Plans," at International Atlantic Economic Society meetings, October 2006.

Presented, "The Risk and Return of Pension Investments in Employer Stock," at International Atlantic Economic Society meetings, October 2005.

Presented, "Replacing Earnings After Termination: Evidence from the Displaced Worker Survey," at the Allied Social Science Association/National Association of Forensic Economics, January 2002.

Presented, "Labor Market Transitions of Older Workers," at the Allied Social Science Association/Society of Government Economists meetings, January 1999.

Presented, "Why has the Loss in Pension Coverage Accelerated Among Less Educated Workers?" at the American Economic Association Meetings, 1995.

Presented, "Wages and Gender Composition: Why Do Women's Jobs Pay Less?" at the American Economic Association Meetings, 1994, with Barry Hirsch.

Presented, "Pensions, Labor Turnover, and Employer Size" at the American Economic Association Meetings, 1993, with William Even.

Presented, "Why Did Male Pension Coverage Decline in the 1980s?" at the American Economic Association meetings, 1992, with William Even.

Participation in Regional Meetings

Presented "Unions and Pension Performance: The Role of Pension Design," at Southern Economics Association meetings, November 2009.

Panel member, "Recent Federal Reserve Policy: An Evaluation" at Southern Economics Association meetings, November 2009.

Discussant, "Topics in Health Economics," at Southern Economics Association meetings, November 2009.

Discussant, "Teacher Pay, Principals, and Schooling," at Southern Economics Association meetings, November 2009.

Presented "Is Bigger Still Better?: The Decline of the Wage Premium at Large Firms," at Western Economic Association meetings, July 2009.

Presented "Is Bigger Still Better?: The Decline of the Wage Premium at Large Firms," at Eastern Economic Association meetings, February 2009.

Panel Discussant at the Southern Economic Association meetings, November 2008.

Presented "Is Bigger Still Better?: The Decline of the Wage Premium at Large Firms," at Southern Economic Association meetings, November 2008.

Presented "The Growth of Participant Direction in Defined Contribution Pensions," at Western Economic Association meetings, July 2008.

Chair "Pensions and Retirement" Session at Southern Economic Association meetings, November 2007.

Presented "The Growth of Participant Direction in Defined Contribution Pensions," at Southern Economic Association meetings, November 2007.

Presented, "Participant Direction in Defined Contribution Pension Plans," at Southern Economic Association meetings, November 2006.

Panel Discussant, Southern Economic Association meetings, November 2005.

Presented, "Do Pensions Impede Phased Retirement?" at the Southern Economic Association meetings, November 2004.

Presented, "When Will the Gender Gap in Retirement Income Narrow?" at the Southern Economic Association meetings, November 2003.

Presented, "How Will the Growth of DC and 401(k) Plans Affect Pension Income?" at the Southern Economic Association meetings, November 2002.

Presented, "Racial Composition, Wages, and Quality Sorting," at the Southern Economic Association meetings, November 1999.

Presented, "Racial and Ethnic Differences in Pension Coverage and Benefit Levels," at the Southern Economic Association meetings, November 1998.

Presented, "Factors Influencing Participation and Contribution Levels in 401(k) Plans," at the Western Economics Association meetings, July 1998.

Presented, "Aging at Work: Employment Determination, Firm Strategies, and Public Policy in the United States," at the Western Economic Association meetings, July 1994.

Presented, "Why Did Male Pension Coverage Decline in the 1980s?" at the Western Economic Association meetings, July 1992.

Presented "Plant Size and the Decline of Unionism," at the Southern Economic Association meetings, 1989, with William Even.

Panel Discussant, Southern Economic Association meetings, November 1989.

Presented "The Labor Force Participation and Earnings Profiles of Married Female Immigrants," at the Southern Economic Association meetings, November 1988.

Presented "Pensions, Screening, and the Gender Wage Gap," at the Southern Economic Association meetings, November 1988.

Session Chair and Panel Discussant at the Southern Economic Association meetings, November 1988.

Participation in Invited Seminars, Conferences, and other Presentations

Presented, "Teaching Macroeconomics During Troubled Times," at Creative Ideas for Your Basic Economics Course Conference at Florida State University, February 2012.

Presented, "Participant Direction in Defined Contribution Pension Plans," at Pennsylvania State University, April 2010.

Presented, "The Parallels Between the Japanese Economic Crisis of the 1990s and the US Today" at Creative Ideas for Your Basic Economics Course Conference at Florida State University, February 2010.

Chair "Minimum Wage & EITC" Session at Society of Labor Economists meetings, May 2009.

Presented "Participant Direction in Defined Contribution Plans," at Lehigh University, April 2009.

Presented "Is Bigger Still Better?: The Decline of the Wage Premium at Large Firms," at Association of Private Enterprise Education meetings, April 2009.

Presented "The Growth of Participant Direction in Defined Contribution Pensions," at Trinity University, October 2008.

Presented "The Growth of Participant Direction in Defined Contribution Pensions," at Georgia State University, April 2008.

Presented "The Growth of Participant Direction in Defined Contribution Pensions," at Association of Private Enterprise Education meetings, April 2008.
Presented, "Improving Pension Coverage at Small Firms," at Hudson Institute, May 2006.

Presented, "Participant Direction in Defined Contribution Plans," at Society of Labor Economics meetings, May 2006.

Presented, "Participant Direction in Defined Contribution Plans," at Association of Private Enterprise Education meetings, April 2006.

Presented, "Participant Direction in Defined Contribution Plans," at University of Wisconsin-Milwaukee, April 2006.

Invited Panel Participant for Pepper Foundation and Center Symposium on pension reform, Washington, DC, February 2006.

Presented, "The Risk and Return of Pension Investments in Employer Stock," at West Virginia University, April 2005.

Presented, "The Risk and Return of Pension Investments in Employer Stock," at the University of Kentucky, November 2004.

Presented, "The Causes and Consequences of Company Stock Holdings in Pension Funds," at the Federal Reserve Bank of Atlanta, April 2004.

Presented, "The Causes and Consequences of Company Stock Holdings in Pension Funds," at the University of Oklahoma, February 2004.

Presented, "Tracking Union and Nonunion Wages in the U.S.: Can the Evidence be Reconciled?" at the Middlebury Annual Conference on Economic Issues, April 2002.

Presented, "How Will the Growth of DC and 401(k) Plans Affect Pension Income?" at the Miami University Center for Pension and Retirement Research Conference, June 2001.

Presented, "Benefits and Worker Productivity," Benefits for the Workplace of Tomorrow Conference, Wharton School, University of Pennsylvania, May 2001.

Participant, Innovations in Managing the Financial Risks of Retirement Conference, Wharton School, University of Pennsylvania, May 2000.

Presented "Using Hi-Tech in Large Lectures," at Association of Private Enterprise Education meetings, April 2000.

Presented "Employee Participation in 401(k) Plans," at University of Wisconsin-Milwaukee, October 1999.

Presented "Gender, Race, and Ethnicity in the Labor Market," as part of the Smith Chair course in Labor Economics at Brigham Young University, September 1999.

Presented, "The Decline in Pension Coverage Among Less Educated Workers," at the Florida State University Economics Department Seminar Series, 1996.

Presented, "Children's Effects on Women's Labor Market Attachment and Earnings" at the Conference on the Changes in Working Time in Canada and the United States, Canadian Employment Research Forum, 1996.

Presented, "Earnings, Rents, and Competition in the Airline Labor Market" at the Ohio State University Economics Department Seminar Series, 1996.

Presented, "Earnings, Rents, and Competition in the Airline Labor Market" at the Florida State University Economics Department Seminar Series, 1995.

Presented, "Employer Size and Labor Turnover: The Role of Pensions," at Syracuse University, 1995.

Presented, "Earnings, Rents, and Competition in the Airline Labor Market" while visiting scholar at the Federal Reserve Bank of Cleveland, 1995.

Presented, "Trends in Individual and Household Pension Coverage," at the Miami University Center for Pension and Retirement Research Conference, 1994.

Presented, "Racial Composition, Quality Sorting, and the Black-White Wage Gap" at the University of Wisconsin, Institute for Research on Poverty, Small Grants Workshop, 1993, with Barry Hirsch.

Presented, "Why Did Male Pension Coverage Decline in the 1980s?" at the Florida State University Economics Department Seminar Series, 1992.

Participant at National Bureau of Economic Research (NBER) Labor Studies meetings of the Summer Institute, 1992.

Presented, "Why Did Male Pension Coverage Decline in the 1980s?" at the Miami University Conference on Current Pension Policy Issues, 1992.

Organizer and participant at conference on "Contemporary Issues in Pension Economics," hosted by the Center for Pension and Retirement Research, Miami University, 1990.

Presented "The Effect of International Competition on Union and Nonunion Wages," at the University of Cincinnati Seminar Series, 1987.

Outside reviewer for Department of Economics, UNC-Greensboro, Georgia State University.

Promotion and tenure letters for candidates at Georgia State University, Kansas State University, Monmouth University, Ohio State University, University of Massachusetts, University of Southern California, and University of Wisconsin-Milwaukee.

Honors and Awards

Awarded sabbatical, Trinity, Fall 2011.

Nominated for FSU Award for Excellence in Undergraduate Teaching, Spring 2005.

Named Rod and Hope Brim Eminent Scholar in Economics, FSU, Fall 2004.

Research Fellow, Institute for the Study of Labor (IZA), Bonn, 2004-.

Who's Who in Economics, Fourth Edition, Mark Blaug and Howard Vane (eds), Edward Elgar Publishing, 2003, pp. 524 (selection criteria: one of the 1,200 most frequently cited economists in the years 1990-2000 using the Social Science Citation Index).

Awarded Abba Lerner named professorship, FSU, Spring 2000.

Awarded sabbatical, FSU, Spring 2000.

Received FSU Award for Excellence in Undergraduate Teaching, Spring 2000.

Received FSU Teaching Incentive Program Award, Fall 1995.

Nominated for FSU Award for Excellence in Undergraduate Teaching, Spring 1994.

Nominated for Outstanding Teaching Award, Associated Student Government, Miami University,1992.
Selected by the Miami University Sisters of Delta Gamma for a "Favorite Professor Award" in Fall 1990.

Honorary Member of Golden Key National Honor Society, Fall 1989.

Selected by the Sisters of Delta Gamma as "One of the twenty five most outstanding faculty members at Miami University" in Fall 1988.

Service

Vice President, Southern Economic Association, 2011-

Trinity University

Dick and Peggy Prassel Professor of Business Administration Search Committee, 2011
Faculty and Staff Compensation Committee, 2010-2011
Student Retention Committee, 2010

Florida State University

University and College Committees:

Member, GPC subcommittee for Marketing, Spring 2008.
Member, Graduate Policy Committee, Fall 2007-.
Chair, GPC subcommittee for Political Science, Fall 2006.
Member, Title IV Admissions Attendance Committee, Fall 2003-Spring 2004.
Member, College of Social Sciences Executive Committee, Fall 2003-.
Member, Ad Hoc Committee on COSS Technology, Spring 2003.
Member, Computing and Information Resource Committee, Fall 1999-.
Member, Academic and Policy Affairs Committee, Fall 1996-Spring 1998.

Economics Department Committees:

Member, Ad Hoc Committee on Economics 2000 Level Courses, Spring 1999.
Member, Undergraduate Economics Committee, Fall 1998-
Member, Economics Department Executive Committee, Fall 1994-Spring 1995, Fall 1996-Spring 1999, Fall 2000-.
Economics Department Library Representative, Fall 1993-.
Micro/Macroeconomics Seminar Coordinator, Fall 1993-Spring 1995, Fall 1998-Fall 1999, Fall 2001, Fall 2006-.

Comprehensive Examination Committees:

Member, Masters Comprehensive Exam Committee, Spring 1994.
Member, Ph.D. Labor Field Exam Committee, Fall 1992, Spring 1994, Fall 1994, Fall 1995, Fall 1996, Spring 1997, Spring 1998.
Chair, Masters Comprehensive Exam Committee, Fall 1994, Spring 1998.

Depositions and Trial Testimony: 2008 to 2012

1. Angela Speed and Adrian Speed vs. Hertz Corporation
   Atty: Dawn Pompey Whitehurst; Brevard County, Florida; gave deposition; wrongful injury; 2008; Case No: 05-2005-CA-065447

2. Patricia Morrison vs. Anthony Mork and Microspine Surgery
   Atty: Steven Andrews; Walton County, Florida; testified at trial; wrongful injury; 2008; Case No: 06000249CA.

3. James Tomaselli vs. State of Florida, Department of Corrections
   Atty: Gordon Leech; Martin County, Florida; gave deposition; wrongful termination; 2008; Case No: 01-554-CA.

4. Russell Martin, et al. v. City of Atlanta, et al.
   Atty: Andrew Coffman; U.S. District Court, Northern District of Georgia, Atlanta 5Division; gave deposition; racial discrimination; 2008; Case CA File No: 1:07-cv-00326-BBM

5. McCabe, et al. v. Harmon Fruit, et al.
   Atty: Larry Perry; Polk County, Florida; gave deposition; wrongful death; 2008; Case 53-2005-CA-003612-0000-00

6. Thomas Faulkner v. Michael Chertoff and Department of Homeland Security
   Atty: John Davis; U.S. District Court; Northern District of Florida; gave deposition; wrongful termination; 2009; Case 4:08CV341-SPM/WCS

7. Matthew Debord and Tabitha Debord vs. G & S Material Service et al.
   Atty: Hubert Brown; U.S. District Court; Northern District of Florida; gave deposition; wrongful injury; 2009; Case 3:07cv365-LAC/MD

8. Jessica Loveday vs. USA
   Atty: Anthony Caggiano; U.S. District Court; Northern District of Florida; gave deposition; wrongful injury; 2009; Case 1:08cv205/SPM

9. Julia Keyes vs. AIG
   Atty: Larry Perry; Jackson County, Florida; gave deposition; wrongful injury; 2009; Case 08706CA

10. Estate of Linda DePuy vs. Broeseker et al.
    Atty: Steve Andrews; Leon County, Florida; gave deposition; wrongful death; 2009; Case 2007 CA 2509

11. Oliver and Sollman vs. VSoft Inc.
    Atty: Larry Pankey; U.S. District Court, Northern District of Georgia, Atlanta Division; gave deposition; age discrimination; 2009; Case CA File No: 1:09-CV-0185

12. Yolanda Young vs. Covington and Burling, LLP
    Atty: Latif Damon; U.S. District Court for the District of Columbia; gave deposition; racial discrimination; 2009; Case CA File No: 1:09-CV-0464 RBW

13. Deborah Suboh vs. Mark Bergeson et al.
    Atty: Stephanie Wright and Charlotte Perrell; Georgia, Dekalb County; Case 07A77585-5, gave deposition; legal malpractice; 2010.

14. Rolando Simmons vs. Davis and Peterson
    Atty: Hubert Brown; Florida, Calhoun County; Case 2008-0150-CA, gave deposition and testified at trial; medical malpractice; 2010.

15. Lorie J. Marshall, et al. vs. H & R Block Tax Services, Inc.
    Atty: Allan Steyer; U.S, U.S. District Court
    Southern District of Illinois; Case No. 3:08-CV591-MJR; gave deposition; consumer damages; 2010.

16. Daren Davis vs. Joseph Austin and Terry Roberts Work Site
    Atty: Anthony Caggiano; Florida, Osceola County; gave deposition; wrongful injury; 2010; Case 2006 CA 002997 AN

17. David Darrow vs. Adventist Health Systems/Sunbelt Inc.
    Atty: Anthony Caggiano; Florida, Orange County; gave deposition; wrongful injury; 2010; Case 48-2009-CA-004897-0

18. Samuel Gonzalez vs. Gurdev Singh Nijjar et al.
    Atty: Ramon Rodriguez; Texas, El Paso County; gave deposition; wrongful injury; 2010; Case 2007-011

19. John Davis vs. Devereux Foundation.
    Atty: Thomas Brown; Florida, Brevard County; gave deposition; wrongful injury; 2010; Case 99-15992-CA-F

20. Al Kowalski vs. et al. YellowPages.Com, LLC
    Atty: Peter Pearlman; U.S. District Court Southern District of New York; Case No. 10-7318 (PGG); gave deposition; consumer damages; 2011.

21. Christina Glover and Jason Glover vs. Publix Super Markets
    Atty: Phelicia Steill; Florida, Leon; Case No. 08 CA 2695; gave deposition; wrongful injury; 2011.

22. Lissette Cartagena and William Cartagena vs. Bracero et al.
    Atty: Thomas Brown; Florida, Orange County; Case No. 07-CA-2645 DIV 34; gave deposition and testified at trial; wrongful injury; 2011.

23. Lillie Conyers and James Conyers vs. Werner Enterprises et al.
    Atty: Thomas Brown; Florida, Jackson County; Case No. 09-1174-CA; gave deposition; wrongful injury; 2011.

24. Shannon McCants vs. Wackenhut Corporation
    Atty: Dawn Pompey Whitehurst; Duval County, Florida; gave deposition and testified at trial; wrongful death; 2011; Case No: 16-2008-CA-014834

25. Christina Whipple versus R.E.S.A, Inc.
    Atty: Susan Haney; Bexar County, Texas; gave deposition; business damages; 2011; Case No.: 2009-CI-17074

26. Daniel Plouffe, et al. versus General Motors, LLC
    Atty: Michael Pitt; Wayne County, Michigan; gave deposition; age discrimination; 2012; Case No.: Case No. 11-007645-CL

27. Johnny Cash versus State Farm
    Atty: Steven Andrews; Leon County, Florida; testified at trial; wrongful injury; 2012; Case No.: Case No. 10-CA-2429

The State Auditor's office did not receive a response from the **Department of Elementary and Secondary Education, Adair County, Boone County, Callaway County, Cass County, Clay County, Cole County, Jackson County, Jasper County, St. Charles County, St. Louis County, Taney County,** the **City of Cape Girardeau,** the **City of Columbia,** the **City of Jefferson,** the **City of Joplin,** the **City of Kirksville,** the **City of Mexico,** the **City of St. Joseph,** the **City of St. Louis,** the **City of Springfield,** the **City of Union,** the **City of Wentzville,** the **City of West Plains, Cape Girardeau 63 School District, Hannibal 60 School District, State Technical College of Missouri, Metropolitan Community College,** and **St. Louis Community College, Harris-Stowe State University, Lincoln University, Northwest Missouri State University, Southeast Missouri State University, Truman State University, Kansas City Board of Police Commissioners, The Metropolitan Police Department - City of St. Louis,** the **St. Louis County Board of Elections,** the **Board of Election Commissioners City of St. Louis,** and the **Clay County Board of Election Commissioners.**

Fiscal Note Summary

State and local governments estimate no direct costs or savings from the proposal, but operating costs could increase by an unknown annual amount that could be significant. State and local government tax revenue could change by an unknown annual amount ranging from a $1.7 million decrease to a $211 million increase depending on business decisions.

STATE AUDITORS OFFICE

The Honorable Nicole Galloway
State Auditor
State Capitol Building
Jefferson City, MO 65101

RE: Petition approval request from Richard Von Glahn regarding a proposed statutory amendment to Chapter 290, Version 6 (2018-201)

Dear Auditor Galloway:

Enclosed please find an initiative petition sample sheet for a proposal to amend the Revised Statutes of Missouri filed by Richard Von Glahn on April 3, 2017.

We are referring the enclosed petition sample sheet to you for the purposes of preparing a fiscal note and fiscal note summary as required by Section 116.332, RSMo. Section 116.175.2, RSMo requires the state auditor to forward the fiscal note and fiscal note summary to the attorney general within twenty days of receipt of the petition sample sheet.

Thank you for your immediate consideration of this request.

Sincerely,

John R. Ashcroft

Be it enacted by the people of the state of Missouri:

Section 290.502 of the Revised Statutes of Missouri is amended and a new section to be known as section 290.529 is enacted to read as follows:

290.502. 1. Except as may be otherwise provided pursuant to sections 290.500 to 290.530, effective January 1, 2007, every employer shall pay to each employee wages at the rate of $6.50 per hour, or wages at the same rate or rates set under the provisions of federal law as the prevailing federal minimum wage applicable to those covered jobs in interstate commerce, whichever rate per hour is higher.

2. The minimum wage shall be increased or decreased on January 1, 2008, and on January 1 of successive years, by the increase or decrease in the cost of living. On September 30, 2007, and on each September 30 of each successive year, the director shall measure the increase or decrease in the cost of living by the percentage increase or decrease as of the preceding July over the level as of July of the immediately preceding year of the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W) or successor index as published by the U.S. Department of Labor or its successor agency, with the amount of the minimum wage increase or decrease rounded to the nearest five cents.

3. Except as may be otherwise provided pursuant to sections 290.500 to 290.530, and notwithstanding subsection (1) of this section, effective January 1, 2019, every employer shall pay to each employee wages at the rate of not less than $9.00 per hour, or wages at the same rate or rates set under the provisions of federal law as the prevailing federal minimum wage applicable to those covered jobs in interstate commerce, whichever rate per hour is higher. Thereafter, the minimum wage established by this subsection shall be increased each year by $1.00 per hour, effective January 1 of each of the next four years, until it reaches $13.00 per hour, effective January 1, 2023. Thereafter, the minimum wage established by this subsection shall be increased or decreased on January 1, 2024, and on January 1 of successive years, per the method set forth in subsection (2) of this section. If at any time the federal minimum wage rate is above or is thereafter increased above the minimum wage then in effect under this subsection, the minimum wage required by this subsection shall continue to be increased pursuant to this subsection (3), but the higher federal rate shall immediately become the minimum wage required by this subsection and shall be increased or decreased per the method set forth in subsection (2) for so long as it remains higher than the state minimum wage required and increased pursuant to this subsection.

4. For purposes of this section, the term "public employer" means an employer that is the state or a political subdivision of the state, including a department, agency, officer, bureau, division, board, commission, or instrumentality of the state, or a city, county, town, village, school district, or other political subdivision of the state. Subsection (3) of this section shall not apply to a public employer with respect to its employees. Any public employer that is subject to subsections (1) and (2) of this section shall continue to be subject to those subsections.

290.529. Except in the circumstances set forth in section 290.523, all the provisions of sections 290.500 to 290.530 are severable. If any provision, including any section, subsection, subdivision, paragraph, sentence, or clause, of sections 290.500 to 290.530, or the application thereof to any person or circumstance, is found by a court of competent jurisdiction to be invalid, unconstitutional, or unconstitutionally enacted, such decision shall not affect other provisions or applications of sections 290.500 to 290.530 that can be given effect without the invalid, unconstitutional, or unconstitutionally enacted provision or application.

MISSOURI STATE AUDITOR'S OFFICE
FISCAL NOTE (18-201)

Subject

Initiative petition from Richard Von Glahn regarding a proposed amendment to Chapter 290 of the Revised Statutes of Missouri. (Received April 4, 2017)

Date

April 24, 2017

Description

This proposal would amend Chapter 290 of the Revised Statutes of Missouri.

The amendment is to be voted on in November 2018.

Public comments and other input

The State Auditor's office requested input from the **Attorney General's office,** the **Department of Agriculture,** the **Department of Economic Development,** the **Department of Elementary and Secondary Education,** the **Department of Higher Education,** the **Department of Health and Senior Services,** the **Department of Insurance, Financial Institutions and Professional Registration,** the **Department of Mental Health,** the **Department of Natural Resources,** the **Department of Corrections,** the **Department of Labor and Industrial Relations,** the **Department of Revenue,** the **Department of Public Safety,** the **Department of Social Services,** the **Governor's office,** the **Missouri House of Representatives,** the **Department of Conservation,** the **Department of Transportation,** the **Office of Administration,** the **Office of State Courts Administrator,** the **Missouri Senate,** the **Secretary of State's office,** the **Office of the State Public Defender,** the **State Treasurer's office, Adair County, Boone County, Callaway County, Cass County, Clay County, Cole County, Greene County, Jackson County, Jasper County, St. Charles County, St. Louis County, Taney County,** the **City of Cape Girardeau,** the **City of Columbia,** the **City of Jefferson,** the **City of Joplin,** the **City of Kansas City,** the **City of Kirksville,** the **City of Mexico,** the **City of Raymore,** the **City of St. Joseph,** the **City of St. Louis,** the **City of Springfield,** the **City of Union,** the **City of Wentzville,** the **City of West Plains, Cape Girardeau 63 School District, Hannibal 60 School District, State Technical College of Missouri, Metropolitan Community College, University of Missouri, St. Louis Community College, University of Central Missouri, Harris-Stowe State University, Lincoln University, Missouri State University, Missouri Southern State University, Missouri Western State University, Northwest Missouri State University, Southeast Missouri State University, Truman State University, Kansas City Board of Police Commissioners, The Metropolitan Police Department - City of St. Louis,** the **St. Louis County Board of Elections,** the **Board of Election**

Commissioners City of St. Louis, the **Kansas City Board of Election Commissioners,** the **Platte County Board of Elections,** the **Jackson County Election Board,** and the **Clay County Board of Election Commissioners**.

Lara Granich and **Missouri Jobs with Justice Voter Action** provided information as proponents of the proposal to the State Auditor's office.

Robert Bonney, Chief Executive Officer of the Missouri Restaurant Association provided information as an opponent of the proposal to the State Auditor's office.

Assumptions

Officials from the **Attorney General's office** indicated they expect that, to the extent that the enactment of this proposal would result in increased litigation, they can absorb the costs associated with that increased litigation using existing resources. However, if the enactment of this proposal were to result in substantial additional litigation, they may request additional appropriations. They do not expect that the enactment of this proposal would result in any other increased costs to their office.

Officials from the **Department of Agriculture** indicated there is no fiscal impact to their department for this initiative petition.

Officials from the **Department of Economic Development** indicated no impact to their department.

Officials from the **Department of Higher Education** indicated this initiative petition would not have a fiscal impact on their department since public employers are exempt from the new provisions proposed.

Officials from the **Department of Health and Senior Services** indicated this proposal would have no direct fiscal impact on their department since government employees are exempt from its provisions. However, employees of certain entities that receive funding through the department's budget would be impacted, such as Medicaid Home and Community Based Services vendors/providers and Area Agencies on Aging.

Officials from the **Department of Insurance, Financial Institutions and Professional Registration** indicated this petition, if passed, will have no cost or savings to their department.

Officials from the **Department of Mental Health** indicated this proposal creates no direct obligations or requirements to their department that would result in a fiscal impact.

Officials from the **Department of Natural Resources** indicated their department defers to the Office of Administration to determine the fiscal impact of this proposal.

Officials from the **Department of Corrections** indicated they defer to the Office of Administration.

Officials from the **Department of Labor and Industrial Relations** indicated no fiscal impact on their department.

Officials from the **Department of Revenue** indicated this petition will have no fiscal impact on their department. Their department defers to the Office of Administration for a state impact.

Officials from the **Department of Public Safety - Office of the Director** indicated they will defer to the response provided for this initiative petition by the Office of Administration - Human Resources.

Officials from the **Department of Social Services** indicated no fiscal impact on their department. They defer to the Office of Administration.

Officials from the **Governor's office** indicated there should be no added cost or savings to their office.

Officials from the **Missouri House of Representatives** indicated no fiscal impact to their office.

Officials from the **Department of Conservation** indicated that no adverse fiscal impact to their department would be expected as a result of this proposal.

Officials from the **Department of Transportation** indicated unknown fiscal impact.

Officials from the **Office of Administration** indicated the proposal amends Sections 290.502 and adds Section 290.529, RSMo.

Section 290.502, RSMo, increases the minimum wage to $9.00 per hour, beginning January 1, 2019 and by another $1.00 per hour each year until it reaches $13.00 per hour beginning January 1, 2023. Thereafter, the minimum wage will be adjusted annually based on the increase/decrease in the cost of living.

The proposal exempts public employers from the requirements; therefore there would be no cost to the State of Missouri.

Because no tax rates are affected, there is no direct impact on general and total state revenues. However, these proposals may have several indirect affects which could impact revenue collections by an unknown amount, including but not limited to:

- Increased wages for certain employees. According to the US BLS, in 2015, Missouri had 57,000 hourly employees earning wages at or below the federal minimum wage;[1]
- Increased consumption by those employees;
- Lower overall employment (if employers choose to hold costs steady);

[1] http://www.bls.gov/opub/reports/minimum-wage/2015/home.htm

- Lower business investment (if employers' payrolls increase);
- Increased prices as firms pass–through labor costs.

This proposal should not impact their office.

Officials from the **Office of State Courts Administrator** indicated there is no fiscal impact on the courts.

Officials from the **Missouri Senate** indicated no fiscal impact on their office.

Officials from the **Secretary of State's office** indicated their office is required to pay for publishing in local newspapers the full text of each statewide ballot measure as directed by Article XII, Section 2(b) of the Missouri Constitution and Section 116.230-116.290, RSMo. Their office is provided with core funding to handle a certain amount of normal activity resulting from each year's legislative session. Funding for this item is adjusted each year depending upon the election cycle with $1.3 million historically appropriated in odd numbered fiscal years and $100,000 appropriated in even numbered fiscal years to meet these requirements. Through FY (fiscal year) 2013, the appropriation had historically been an estimated appropriation because the final cost is dependent upon the number of ballot measures approved by the General Assembly and the initiative petitions certified for the ballot. In FY 2015, the General Assembly changed the appropriation so that it was no longer an estimated appropriation. In FY 2017 their office was appropriated $2.6 million to publish the full text of the measures. In FY 2017, at the August and November elections, there were 6 statewide Constitutional Amendments or ballot propositions that cost $2.4 million to publish (an average of $400,000 per issue). Their office will continue to assume, for the purposes of this fiscal note, that it should have the full appropriation authority it needs to meet the publishing requirements. Because these requirements are mandatory, they reserve the right to request funding to meet the cost of their publishing requirements if the Governor and the General Assembly again change the amount or continue to not designate it as an estimated appropriation.

Officials from the **Office of the State Public Defender** indicated this initiative petition will not have any significant impact on their office.

Officials from the **State Treasurer's office** indicated this proposal would have no impact on their office, as it would not apply to state employees.

Officials from **Greene County** indicated there are no estimated costs or savings to report from their county for this initiative petition.

Officials from the **City of Kansas City** indicated this petition may have a small negative fiscal impact on their city as a result of the increased hourly minimum wage being higher than the hourly rate paid some city employees.

Officials from the **City of Raymore** indicated no fiscal impact.

Officials from **University of Missouri** indicated they are not able to estimate any significant financial impact on their university.

Officials from **University of Central Missouri** indicated they estimate no fiscal impact since they are excluded under the public employer definition in section 4.

Officials from the **Missouri State University** indicated no fiscal impact.

Officials from **Missouri Southern State University** indicated they do not anticipate any fiscal impact from this initiative petition.

Officials from **Missouri Western State University** indicated the wording is unclear as to whether Colleges/Universities are included in this petition. In assuming they are included, they calculate the following significant fiscal impact to their university. The proposal will have a detrimental impact on the university. As proposed increasing minimum wage to $9.00 an hour up to and including $13.00 per hour by 2023 their payroll increases would escalate to a minimum of $455,840.00 with the first scheduled increase to $2,039,200.00 by 2023, the proposed date for minimum wage to reach $13.00 per hour. These additional expenditures would be devastating to the university's overall operations.

Officials from the **Kansas City Board of Election Commissioners** indicated no fiscal effect on their operations.

Officials from the **Platte County Board of Elections** indicated no fiscal impact.

Officials from the **Jackson County Election Board** indicated this petition does not have a fiscal impact on their office.

Lara Granich and **Missouri Jobs with Justice Voter Action** provided the following information as proponents of this initiative petition.

This letter is from Lara Granich and Missouri Jobs with Justice Voter Action, proponents of the above-referenced Minimum Wage Initiative Petitions. Pursuant to RSMo. Section 116.175, we write to submit the following fiscal impact information to assist your office in its analysis of the fiscal impact of the above-mentioned seven proposed Minimum Wage Initiative Petitions.

Our analysis estimates the impact of the proposed Minimum Wage Initiative Petitions on state and local sales and personal income tax revenue in Missouri. We follow the process that has been used in the past to estimate the impact of minimum initiative petitions on state and local sales and personal income tax revenue, with some refinements. We also address certain claims that have been made by opponents of similar initiative petitions in the past.

As these petitions exclude public workers from the proposed minimum wage increases, we do not include in our analysis an estimate of the impact on state and local payroll costs of the proposed Minimum Wage Initiative Petitions.

I. Estimate of Number of Workers Affected Statewide and the Impact on Their Wages

Table 1. Summary of the Number of Affected Workers and Aggregate Wage Increases for Missouri in the Final Year of Minimum Wage Implementation.

Proposal	Year of Peak Minimum Wage (MW)	Proposed Peak MW	Tipped MW in Peak MW Year	Workers Affected by MW increase	Aggregate Annual Wage Increase in Nominal Dollars
13,14,15[a]	2023	$ 12.00	$ 6.00	835,350	$4,358,798,129
16,17,18[a]	2024	$ 12.00	$ 6.00	819,652	$4,209,438,048
19,20,21[a]	2025	$ 13.00	$ 6.50	900,788	$5,309,336,662
22,23,24[a]	2022	$ 11.00	$ 5.50	738,515	$3,347,138,756
25	2021	$ 11.00	$ 5.50	761,164	$3,469,534,559
26	2022	$ 12.00	$ 6.00	852,284	$4,510,285,824
27	2023	$ 13.00	$ 6.50	949,801	$5,667,065,534
28	2024	$ 12.00	$ 9.60	832,328	$4,288,614,460
29	2025	$ 13.00	$ 7.80	905,942	$5,332,471,496
30	2022	$ 12.00	$ 8.40	864,090	$4,558,317,729
31	2022	$ 12.00	$ 6.84	855,887	$4,523,341,931

32	2023	$ 13.00	$ 9.75	948,421	$5,745,051,956
33	2023	$ 13.00	$ 7.54	942,566	$5,685,951,766

Notes: Author's Analysis of American Community Survey (ACS) Data from 2014.
(a) Since these proposals only vary on non-economic factors, their economic and fiscal impacts are treated as equal for the purposes of this report.

Across the proposals analyzed, the total aggregate wage increase for workers in Missouri ranges from a low of $3.347 billion (Proposals 22-24) to a high of $5.745 billion under Proposal 32. While some proposals have the same final impact numbers, they have different impacts in the initial years (not listed) based on the relative pace of increases in earlier years. A full, year-by-year impact analysis is presented in Appendix Tables A1 through A13 below.

The wage impact of an increase in the minimum wage for the state of Missouri is calculated using the following procedure. The American Community Survey (ACS) Public Use Micro Sample for the most recent year available (2014) for the state of Missouri was downloaded from the US Census Bureau. The American Community Survey was chosen over the Current Population survey because the ACS has a significantly larger sample. We followed the method of Perry, Thomason, and Bernhardt (2016) for calculating an hourly wage rate from the ACS based on observed total annual wage income, typical hours worked each week and weeks worked per year. Since ACS income figures are clustered around whole-numbers, we smoothed the wage distribution by randomly adding or subtracting $0.25 from each wage figure.

Wage adjustments were made only for those individuals earning less than the proposed minimum wage, or proposed tipped minimum wage. We did not make additional adjustments for the "ripple effect" of minimum wage increases on workers earning slightly above the new threshold. Recent evidence suggests that workers earning up to 15 percent above of the minimum wage also receive small increases in response to a minimum wage increase. (See Wicks-Lim (2006) and Dube, Giuliano and Leonard (2015).) Thus, the estimated impacts listed above are likely to be smaller than the actual impact of increasing the minimum wage to the proposed level.

The proposed minimum wage increases exclude public employees. However, it was not practicable to exclude public employees from these calculations because the ACS does not have a published variable that allows for identification of public employees. Nonetheless, this inclusion of public employees should have only a minimal impact on our results, since their numbers are small and most already earn more than the proposed minimum wage increases.[1]

All wages from the 2014 survey were adjusted upward to account for inflation between the time of the survey and the time of measurement of the impact. Actual rates of inflation were used to adjust wages up to 2016. For all subsequent years between 2017 and 2028, baseline wages were adjusted using the projected annual average rate of change in the Consumer Price Index for Urban Workers (CPI-U) for the Midwest region. The 2015 and 2016 Missouri Minimum wage of $7.65 was adjusted by the same factor prior to measuring the impact of a change to the proposed minimum wage in 2019.

After these adjustments, the resulting hourly wage of all employees was compared to the proposed minimum wage. A total of twenty-one proposals were analyzed. For each proposal, we constructed a baseline wage scenario that used only basic wage changes from expected inflation rates to predict each ACS respondent's hourly wage rate in each year

[1] For Missouri's state employees, this can be validated by viewing the earnings of all state employees at: http://mapyourtaxes.mo.gov/MAP/Employees/. In larger counties and cities most all public employees already earn more than the highest proposed minimum wage. Smaller counties and towns may have some public employees who earn less than the highest proposed minimum.

between 2019 and 2028. We then constructed a counterfactual, or "proposed" wage distribution for each worker under all twenty-one minimum wage proposed scenarios. Since the minimum wage proposals offer nine different paths for raising the minimum wage for all non-tipped private sector workers, and different wage paths for tipped workers, we create separate minimum wage changes for tipped and non-tipped workers. Specifically, we used information on a worker's occupation and observed wage levels to separately identify tipped workers and assign them the proposed tipped minimum wage in each year, rather than the higher non-tipped minimum wage.[2]

If the proposed minimum wage was less than the inflation-adjusted hourly earnings of an employee, then no impact was calculated. If the proposed minimum wage was more than the hourly earnings for an employee, then the difference between the inflation-adjusted hourly earnings (i.e. baseline) and the proposed minimum wage was calculated. That difference was multiplied by the number of hours the employee worked in the year to calculate the annual impact for that employee. The result was then multiplied by a weighing factor for that employee in the population. The total impact for the state of Missouri was then summed across all affected workers to generate a total estimated increase in wage income in the state.

We do not include an estimate of job losses due to minimum wage changes. Existing research is clear that past minimum wage increases have had no measurable effect on aggregate employment levels. Larger minimum wage increases, such as those in Los Angeles, Seattle, and other jurisdictions, have not yet been studied to detect a clear disemployment effect. While it is possible that there may be some employment losses due to automation or other factors, this potential negative effect is likely offset by the positive potential job growth stemming from multiplier effects of the spending of minimum wage workers who receive substantial raises. There is substantial research to indicate that increases in the minimum wage have multiplier effects that increase the direct effects. For this reason and because of the likely increases in wages for individuals who earn above the proposed minimum wage rates, the impacts summarized in the table are considered conservative estimates relative to the total impact that would occur as a result of increasing the minimum wage to the proposed levels.

II. Economic Literature on the Impact of Minimum Wage Increases on Employment

Next, it is necessary to review the economic literature on the impact of minimum wage increases on employment. Opponents often claim that minimum wage increases may reduce employment in a state. If that is true, then those employment reductions would result in reductions in state income and sales tax revenue. However, review of the most credible recent empirical research on the minimum wage shows that increases in the minimum wage have had no discernible impact on employment. We thus conclude that it is not appropriate to project that the proposed initiative petitions would result in any detectable employment reduction, and resulting losses in income and sales tax revenue, or increases in unemployment-related costs to the state.

Economists have conducted hundreds of studies of the employment impact of the minimum wage. A recent meta-study – a formal statistical study of studies – by Doucouliagos and Stanley (2009) reviewed all the research conducted over the last three decades on the employment impact of minimum wage increases on teenagers in the United States. The researchers concluded that the minimum wage has little or no discernible effect on the employment prospects of low-wage workers. Their study followed a rigorous, peer-reviewed procedure and has the advantage of using a set of predetermined, objective criteria for weighing the validity of statistical findings across studies with different results.

[2] We defined tipped workers as those employed in occupations that typically receive a large share of income as tips. These occupations were 'Bartenders' (4040), 'Waiters and Waitresses', 'Food Servers, Non-restaurant' and 'Miscellaneous food preparation and serving related workers including dining room and cafeteria attendants and bartender helpers'.

(Source: Doucouliagos, Hristos and T. D. Stanley. 2009. "Publication Selection Bias in Minimum-Wage Research? A Meta-Regression Analysis." British Journal of Industrial Relations,vol. 47, no. 2, pp. 406-428.)

Recent theoretical and empirical research emphasizes several explanations for the consistently negligible employment impacts of moderate increases in the minimum wage. First, relative to total wage costs, minimum-wage increases are small. Second, employers and workers appear to respond to minimum-wage increases in many ways that reduce the direct cost to employers and substantially reduce or eliminate the need to cut employment.

Probably the most important economic response to a higher minimum wage is a reduction in turnover. At higher wages, employers fill vacancies faster and retain employees longer, boosting total employment and average productivity per worker while reducing direct and indirect training costs. Dube, Lester, and Reich (2012), for example, examined the effect of the minimum wage on labor turnover among teens and restaurant workers. They find "...striking evidence that separations, new hires, and turnover rates for teens and restaurant workers fall substantially following a minimum wage increase..." (p. 2). Their findings, using nationally representative data, are consistent with local case studies of the minimum wage and related "living wage" laws, including Dube, Naidu, and Reich's (2007) analysis of the San Francisco city-wide minimum wage; Fairris's (2005) study of local government contractors in Los Angeles; Howes (2005) on homecare workers in California; and Reich, Hall, and Jacobs (2005) on workers at the San Francisco airport.
(Sources: Dube, Arindrajit, T. William Lester, and Michael Reich. 2012. "Minimum Wage Shocks, Employment Flows and Labor Market Frictions." Berkeley, CA: Institute for Research on Labor and Employment. http://escholarship.org/uc/item/76p927ks; Dube, Arindrajit, Suresh Naidu, and Michael Reich. 2007. "The Economic Effects of a Citywide Minimum Wage." *Industrial and Labor Relations Review*, vol. 60, no. 4, pp. 522-543; Fairris, David. 2005. "The Impact of Living Wages on Employers: A Control Group Analysis of the Los Angeles Ordinance." *Industrial Relations*, vol. 44, no. 1, pp. 84-105; Howes, Candace. 2005. "Living Wages and the Retention of Home Care Workers in San Francisco." *Industrial Relations*, vol. 44, 5 no. 1, pp. 139-163; Reich, Michael, Peter Hall, and Ken Jacobs. 2005. "Living Wage Policies at the San Francisco Airport: Impacts on Workers and Businesses." *Industrial Relations*, vol. 44, no. 1, pp. 106-138.)

Employers also appear to respond to increases in the minimum wage by taking measures to boost productivity. Hirsch, Kaufman, and Zelenska's (2011) study of the impact of the federal minimum wage increase on 81 fast-food restaurants in Georgia and Alabama, for example, asked fast-food managers about the scope for efficiency improvements in response to the minimum-wage rise. About 90 percent of managers indicated that they planned to respond to the minimum wage increase with increased performance standards such as "requiring a better attendance and on-time record, faster and more proficient performance of job duties, taking on additional tasks, and faster termination of poor performers." (p. 27) Roughly the same share of managers said that they sought to "boost morale" by presenting the minimum wage increase as a "challenge to the store" and using this as a way "to energize employees to improve productivity." (pp. 28-29) Based on their interviews with store managers, the researchers concluded that a minimum wage increase may function as a "catalyst or shock that forces managers to step out of the daily routine and think about where cost savings can occur." (p. 29) (Source: Hirsch, Barry T., Bruce Kaufman, and Tetyana Zelenska, "Minimum Wage Channels of Adjustment." IZA Discussion Paper No. 6132. Germany: Institute for the Study of Labor. http://www2.gsu.edu/~ecobth/IZA_HKZ_MinWageCoA_dp6132.pdf)

A higher minimum wage may also motivate workers to work harder, independently of any actions by employers to increase productivity. According to "efficiency wage" theory, wages above the competitive-market rate may elicit greater work effort for several reasons. As Carl Shapiro and Joseph Stiglitz (1984) have argued, higher pay increases the cost to workers of losing their job, potentially inducing greater effort from workers in order to reduce their chances of

being fired. George Akerlof (1982), arguing from a more sociological point of view, has suggested that workers may see higher wages as a gift from employers, leading workers to reciprocate by working harder. (Sources: Shapiro, Carl and Joseph E. Stiglitz. 1984. "Equilibrium unemployment as a worker discipline device." *American Economic Review*, vol. 74, no. 3, pp. 433-444; Akerlof, George A. 1982. "Labor contracts as partial gift exchange." *Quarterly Journal of Economics*, vol. 97, no. 4, pp. 543-569.)

We therefore conclude that the proposed increase in the Missouri minimum wage would have no discernible impact on the employment levels of low-wage workers. Accordingly, we do not factor in reductions in employment, or any resulting decrease in sales tax or income tax. We also do not project any increased unemployment insurance costs – both because we do not project any resulting job losses, and, additionally, because unemployment insurance costs are paid for by employer premiums, and so are ultimately not a cost to the state.

For similar reasons, we do not believe that the proposed increase will have any significant adverse economic impact on small businesses or, by extension, on corporate income tax revenue. In fact, many small businesses already pay little if any corporate income tax.

III. State and Local Sales and Personal Income Tax Revenue Impact of Raising the Minimum Wage

Based on the wage impact figures calculated above, and the understanding that the minimum wage increases would be unlikely to result in offsetting job losses, we next calculate the impact of the projected wage increases on state and local sales and personal income tax revenue in Missouri. We project only the direct impact of the various minimum wage increase scenarios on such tax revenue. We do not attempt to project the additional impact through a GDP multiplier effect, or the potentially higher sales taxes generated if employers offset wage increases with higher prices (which would be taxable).

Personal Income Tax Revenue. In order to determine the projected increase in personal income tax revenues that would result directly from the increased wages, we had to develop assumptions about the effective income tax rates of the affected workers. We made the following assumptions with respect to the effective tax rate:

1. That 25% of affected workers can be claimed as a dependent on another party's Missouri income tax return and, as a result, would pay an effective tax rate of 6.0% on the increase in income;
2. That 50% of the affected workers would file as single taxpayers, would claim one deduction of $2,100, and would be entitled to a standard deduction of $5,800. This would result in an effective tax rate of 2.47%;
3. The remaining 25% would, we assumed, pay no additional Missouri income tax.

In light of these assumptions, the increased Missouri income tax revenue for each petition version can be calculated as follows: (total wage increase * 25% * 6.0%) + (total wage increase * 50% * 2.47%) + (total wage increase *25% * 0%).

Sales Tax Revenue. The state of Missouri imposes a 4.225% state sales tax on those items that are not exempt from the sales tax base. In addition, the average local sales tax rate is 2.95%. As a result, the average Missouri net sales tax rate is 7.175%. To estimate the share of income that is spent on goods and services that are subject to sales taxes, we used data from the 2015 Consumer Expenditure Survey (CES) for the US to estimate the share of income spent on categories that are subject to sales taxes. The CES summary tables list average spending per consumer across 20 different

categories (e.g. housing, transportation, food away from home) and we categorized each spending item as taxable or non-taxable and then calculated the share of spending that we taxable.[3] The resulting rate was 30.3 percent.

Based upon the above assumptions, and the total wage increase calculations for each version of the petition, we estimate that the increase in state income tax revenue resulting from the increased wages would be as follows:

Table 2. Summary of the Impact of Minimum Wage Increases on State and Local Sales and Income Taxes in Year of Full Minimum Wage Final Implementation.

Proposal	State Sales Tax (4.225%)	Local Sales Tax Revenue (2.95%)	Total Sales Tax Revenue Increase	Personal Income Tax Revenue	Total Sales and Personal Income Tax Revenue Increase
13,14,15[a]	$55,814,587	$38,971,132	$94,785,719	$119,213,129	$213,998,848

31	$57,921,577	$40,442,285	$98,363,862	$123,713,402	$222,077,264
32	$73,565,624	$51,365,347	$124,930,970	$157,127,171	$282,058,141
33	$72,808,843	$50,836,944	$123,645,787	$155,510,781	$279,156,568

Note: Author's Analysis of American Community Survey (ACS) data from 2014 and fiscal impact assumptions described above. All dollars are in nominal figures. (a) Since these proposals only vary on non-economic factors, their economic and fiscal impacts are treated as equal for the purposes of this report.

As described in Table 2 above, the fiscal impact of the proposed minimum wage increases varies based on the ultimate level of the minimum wage and the degree of tipped minimum wage phase out. The estimates of the total fiscal benefit range from $164 million to $282 million annually. Appendix tables A1 through A13 provide a year-by-year summary of the fiscal benefits.

[3] Specifically, the categories we assumed to be subject to state and local sales taxes are: food, household furnishings and equipment, vehicle purchases, gasoline and motor oil, entertainment, and all other expenditures. We assumed that 50 percent of the spending on the category "apparel and services" was taxable.

We hope that this information is useful to your office as your prepare your analyses of the petitions.

Respectfully submitted,

Lara Granich

1) Total employed workers in 2014 from the ACS was estimated to be 2,795,876. This figure was inflated to each subsequent year based on the population projections in the State of Missouri between 2020 and 2030 (CAGR = 0.6%)

Robert Bonney, Chief Executive Officer of the Missouri Restaurant Association provided the following information as an opponent of this initiative petition.

These corrections were subsequently provided to the submitted information

In the table on the bottom of page 7 and top of page 8, both averages for 2023 should be based on a 5 year phase-in. Accordingly, the figure on that table should state for 2023 ($12) Average Annual Unemployment Premiums Paid by State of $16,269,523.52.

The corresponding change on the table on page 12 would be to state, for 2023 ($12) Total Net Loss to State Government from Taxes and Unemployment Insurance of ($19,137,851.76).

Re: Initiative Petitions 2018-196 through 2018-216

Dear Mr. Halwes,

I write on behalf of Robert Bonney. Mr. Bonney is the Chief Executive Officer of the Missouri Restaurant Association. Please consider this letter and the accompanying studies as his fiscal impact statement as an opponent of Initiative Petitions 2018-196 through 2018-216 (the "Initiative Petitions"). If passed, any of these twenty-one initiatives would have a substantial negative impact on state and local governments, as well as Missouri small businesses. Those effects are both direct (as noted in Section 1) and secondary (as noted in Sections 2 through 5). The direct effects stem from higher labor and contracting costs that the state and its political subdivisions will incur, despite the Initiatives' effort to exclude government workers from the mandate.

The indirect effects will present a debate this Office has seen before. The proponents of the Initiative Petitions will once again rely on data sourced from political activist groups who claim increases in the minimum wage only serve to create new taxable income. The reality is that such groups approach this issue with political bias. Their analysis is one-sided because it completely ignores the fact that a wage increase does not "create" income from thin air; instead, it is an economic transfer from Missouri businesses to workers. Missouri businesses must pay the new wages "created" by the increases. Political activists' models fail to account, then, for two specific manifestations of the "debit" side of this transfer: reductions in employment, and the reduction in corporate income tax paid based upon business done in Missouri.

The failure to account for any employment effect at any proposed wage increase—even a drastic increase of the minimum wage to $13—is particularly puzzling, because Missouri's most populous areas border Illinois and Kansas. These states, respectively, have minimum wages of $8.25 and $7.25. Neither state adjusts the minimum wage for inflation. Likewise, the second effect—loss of corporate income tax revenues—is a mathematical certainty. Missouri businesses will be the source of the wage increase, which will lower their own taxable income. Assuming a one-to-one substitution of "created" wages for lost corporate income, the difference in the rates

at which these two types of income are taxed will result in a net decrease in state revenue. A dollar from increased wages is taxable by state government in Missouri at 6% or substantially less, whereas Missouri's corporate income tax rate is 6.25%.

On top of these two types of negative outcomes—lower employment and lower state tax revenues—there may be second-order effects to small businesses because they lack the access to capital to weather price fluctuations; they may not survive at all because they may not have the flexibility to simply cut employment, shifting their reliance to capital instead of labor resources, or suffering a decrease in production and revenue.

In short, much of the fiscal impact regarding the current crop of wage-related ballot measures is secondary: they cause transfers of wealth within (or out of) the state economy, and those transfers of wealth then create second-order effects for state and local governments via their collection of tax revenues and provision of welfare services for the unemployed or less-employed. Because these fiscal notes call for the Auditor operate in the area of secondary effects, it is critical that she treat both sides of the wealth transfer equally, and refrain from assessing only one half of the wage increase equation.

1. Direct Labor Cost Impact on State and Local Government Budgets

As noted to the State Auditor's Office previously by Dr. David Macpherson, a nationally prominent labor and economics expert, there are two ways to measure labor cost on state and local government budgets. First, one can use the information included in fiscal note responses from state and local government entities. It is important to note that these fiscal notes provide an incomplete and, therefore, too-low estimate of labor cost. Few state and local government entities respond to requests for a fiscal note response, and those that do respond often ignore important effects.

Second, data from the U.S. Census Bureau's Current Population Survey (CPS) can be used to calculate increased labor cost to state and local government entities in Missouri. To combat this time-honored analysis, and in a blatant attempt to manipulate the fiscal note process, the Initiative Petitions provide that they will raise the minimum wage for private workers, but not for workers employed by state or local governmental entities. No conceivable justification exists for solely raising the minimum wage on private businesses. Whatever the disparity between the value of total compensation at a private business and at a government employer, that disparity does not approach the wage adjustments at issue here, ranging from an inflation adjusted wage increase of 51.16% (($13-$8.60)/$8.60) in Initiative Petitions 2018-198 through 2018-201 to a wage increase of 30.17% (($11-$8.45)/$8.45) in Initiative Petitions 2018-213 through 2018-215.

Moreover, it is unreasonable to assume that on a sustained basis public employers, as defined in the Initiative Petitions, would be able to maintain dramatically lower wage levels than private businesses. Public employers would lose staff employable at higher rates in the private market, imposing substantial costs on government productivity. Using the method traditionally employed by labor economists and followed by the Auditor's office, one can calculate the annual

wage costs to state and local governmental entities, based on the annual wage cost for each state and local government worker in the ORG CPS, as detailed on page 6 of Dr. Macpherson's 2012 report, attached hereto as **Exhibit A**. Even if the auditor finds that a specific estimate of costs is not determinable, the auditor should note that state and local government "operating costs could increase by an unknown annual amount that could be significant," through the form of higher wage costs and higher contracting costs.

The proponents of the Initiative Petitions may argue that the Auditor should abandon any state and local cost estimates altogether. The proponents will argue that provisions they have inserted in the statute would mean that state and local government entities will not have to pay higher wages to their employees. Setting aside unjustifiable discrimination against private employers (and "public employees"), the provision is of uncertain legal effect and constitutionality. A "public employer," defined in the initiatives as "the state or a political subdivision of the state" still incurs substantial costs for wages of individuals that are "private employees," rather than "public employees." Cleaning services, food service, and other essential services often rely on state contracts with outside vendors. Sometimes, a contract rate may vary depending on the cost of labor. Even if the contract rate is fixed, it must be re-bid periodically, and that bidding process would take into account the new minimum wage. Plainly, the initiative would impose higher costs for state and local governments in contracting with any private entity and its employees. As a matter of law, it would be insufficient and unfair for the Auditor's fiscal note or summary to simply assume that these costs to state and local governmental entities do not exist.

2. Cost of Unemployment Benefits

a) The effect of inflation on Missouri's minimum wage

CPS–ORG data show that between 2007 and 2015, median nominal wages for adult (25–59 years old) workers in the U.S. grew by 1.68 percent a year. However, Missouri's minimum wage is currently adjusted using "the percentage increase or decrease as of the preceding July over the level as of July of the immediately preceding year of the Consumer Price Index for Urban Wage Earners and Clerical Workers (CPI-W)." Section 290.502, RSMo. Coincidentally (or perhaps not), the CPI-W, over the period from 2006 to 2016, also increased at an average rate of 1.68 percent a year.

Year	CPI-W	Observed inflation %
2006	199.2	
2007	203.7	0.022590361
2008	216.304	0.061875307
2009	210.526	-0.0267124

2010	213.898	0.016017024
2011	222.686	0.041085003
2012	225.568	0.01294199
2013	230.084	0.02002057
2014	234.525	0.019301646
2015	233.806	-0.00306577
2016	234.771	0.004127353

Using Missouri's current inflation-adjusted minimum wage rate and an assumed, constant 1.68 percent increase in the CPI-W, the minimum wage in Missouri will be as follows:

Year	Estimated Minimum Wage
2016	$7.65 (observed)
2017	$7.70 (observed)
2018	$7.85
2019	$8.00
2020	$8.15
2021	$8.30
2022	$8.45
2023	$8.60
2024	$8.75
2025	$8.90
2026	$9.05

b) Calculating job loss attributable to increased minimum wage

At least one outside economist, James Sherk, has already provided an estimate for job loss in Missouri based on a $15 minimum wage. Mr. Sherk calculated the effect of a $15 minimum wage implemented in 2021. Mr. Sherk's figures accounted for inflation by estimating the present value of $15.00 in 2021, rather than estimating an absolute figure for wage inflation in Missouri. Mr. Sherk calculated the present value of $15.00 in 2021 to be $13.57, per hour, based on wage inflation of 1.68 percent. Mr. Sherk evaluated the change from $7.65 per hour to $13.57 per hour (a 77.39% increase), exclusive of agricultural workers. Cumulatively, Mr. Sherk calculated this 77.39 percent increase in wages to reduce employment in the affected workforce by (0.7739*0.677) 52.39%.

Graves Garrett LLC

Mr. Sherk calculated that approximately 40.9% of Missouri's Wage and Salary Workers would be affected by such a $15 minimum wage. Mr. Sherk's calculations reveal that a $15 minimum wage in 2021 would be expected to reduce the number of full-time equivalent jobs in Missouri by approximately 218,000. Based on CPS–ORG data, these figures reveal an affected workforce of approximately 416,086 workers impacted by a $15 minimum wage increase in 2021.

However, in 2014, Dr. Macpherson found, using more conservative, national-level Congressional Budget Office data, that an increase to a $10.10 minimum wage, effective January 1, 2015, would eliminate about 15,700 jobs in Missouri. Dr. Macpherson analyzed the effect of a Missouri $10.10 minimum wage using a model suitable to a national analysis. This analysis predicted a loss of 15,700 Missouri jobs based on a wage increase from $7.50 in 2014 to $10.10 in 2015 (a 34.67% increase).

On the whole, the analysis by Mr. Sherk is more instructive here, since it is more recent, Missouri-specific, and anticipates larger wage changes contemplated by the Initiative Petitions. The most accurate way to determine the estimate of Workers Affected would be to analyze the CPS–ORG data. However, without such data readily available in the time constraints imposed by the fiscal note process, it is reasonable for estimation purposes to assume Mr. Sherk's figures are evenly distributed. Assuming that worker data follows an equal distribution, the Initiative Petitions would be expected to result in the following job losses:

Year of final prescribed wage increase	Wage without IP	Wage mandated by IP	Percentage increase	Percentage of affected workers who lose jobs (Percentage Increase x 0.677 Elasticity)	Estimate of Workers Affected	Estimate of Missouri Workers Unemployed by Initiative
2021	$8.30	$11.00	32.53%	22.02%	174,897	38,512
2022	$8.45	$11.00	30.18%	20.43%	162,262	33,150
2022	$8.45	$12.00	42.01%	28.44%	225,866	64,236
2023	$8.60	$12.00	39.53%	26.77%	212,532	56,895
2023	$8.60	$13.00	51.16%	34.64%	275,061	95,281
2024	$8.75	$12.00	37.14%	25.15%	199,683	50,220
2024	$8.75	$13.00	48.57%	32.88%	261,136	85,861
2025	$8.90	$13.00	46.07%	31.19%	247,695	77,256
2026	$9.05	$13.00	43.65%	29.55%	234,683	69,349

c) The best estimate for a price elasticity of demand for low-skilled labor is -0.677.

As noted by Mr. Sherk, starting wages of $15.00 per hour mean that full-time employee must create at least $38,700 a year in value for his or her employer (including wages, employer payroll taxes, and mandatory healthcare benefits). High minimum wages and mandatory benefit costs make it much harder for less-experienced and less-skilled workers to find jobs, particularly full-time work.

Recent labor economics scholarship has revealed that, accounting for publication bias, a state-specific elasticity of demand for less-skilled workers is, on average, approximately -0.677, though some estimates are even higher, around -1.0.[1] "[E]conomists have extensively studied how businesses respond to higher wages overall, not just minimum-wage increases. On average these studies find a 10 percent increase in labor costs causes firms to reduce employment of less-skilled workers by 6.8 percent in the long run."[2]

While these elasticity estimates are substantial in absolute terms, there is reason to believe that such estimates might still understate the impact of a Missouri state-specific effort to increase the minimum wage. This is so for several reasons. First, traditionally, labor economists view labor as a reasonably difficult input to substitute; however, Missouri businesses have readily available options. There are relatively few barriers to doing business in Missouri's border states, and businesses can easily relocate across a state line to take advantage of more favorable wage (and tax laws). Additionally, substantially raising the cost for Missouri labor, relative to labor sources in other states and other countries, is likely to force many manufacturing jobs in Missouri to disappear entirely. Automation is also a significant risk. The substitution of labor is becoming increasingly easy due to technology advancements and the "sharing" economy, where fewer individuals are "employees" covered by the minimum wage. Finally, a labor "price shock" may result in significant decreases in the demand for goods and services. People make behavioral changes to avoid higher costs, including eating out less often and generally decreasing consumption (or shifting their activities to consumption involving comparatively low amounts of labor) wherever possible.

[1] Sherk, James, "How $15-per-Hour Minimum Starting Wages Would Affect Each State," The Heritage Foundation, http://report.heritage.org/ib4601.

[2] "The coefficients on these estimates imply an elasticity of –0.677 for a study published in 2012 (the most recent year in their data) of long-run unconditional labor demand for low-skilled labor in the U.S., estimated using industry-level administrative panel data and a structural form model." "Estimates that do not account for publication bias tend to slow a long-run elasticity closer to –1.0. See, for example, George Borjas, Labor Economics, 6th ed. (Columbus, OH: McGraw-Hill, 2013), Chapter 4: 'The evidence also suggests that the estimates of the long-run labor demand elasticity cluster around –1, so the long-run labor demand curve is indeed more elastic than the short-run curve.' " Sherk, available at http://report.heritage.org/ib4601.

Graves Garrett LLC

d) Unemployment Benefit Costs

We derived an average unemployment payout by calculating the expected weekly unemployment benefit amount. Based on current data, the expected unemployment weekly benefit amount of a worker making $7.65 an hour, on a 40 hour workweek, is $159.12 per week, for 20 weeks.[3] The expected unemployment weekly benefit amount of a worker making $10.99 an hour is $228.59 per week. The expected unemployment weekly benefit amount of a worker making $11.99 an hour is $249.39 per week. The expected unemployment weekly benefit amount of a worker making $12.99 an hour is $270.19 per week. We assume that workers will seek unemployment insurance for the full twenty weeks authorized under Missouri law, because unemployment attributable to an increase in the minimum wage is structural. In this case, structural unemployment occurs because workers' job skills do not meet the established "price floor" of labor, rendering the worker's skills unmarketable. Assuming an even distribution of workers affected, the average unemployment benefit cost to the state for a worker is calculated as follows:

- For Initiative Petitions 2018-213 through 2018-216, [($159.12+$228.59)/2]*20 = $3,877.10
- For Initiative Petitions 2018-196, 2018-197, 2018-200, 2018-202, and 2018-204 through 209, [($159.12+$249.39)/2]*20 = $4,085.10
- For Initiative Petitions 2018-198, 2018-199, 2018-201, 2018-203, 2018-210 through 2018-212, [($159.12+$270.19)/2]*20 = $4,293.10

Consistent with Dr. Macpherson's 2012 report, it would be reasonable for the Auditor to assume that 35% of unemployed workers will receive unemployment benefits. Combining these numbers leads to the following estimates:

Year of final prescribed wage increase	Estimate of Missouri Workers Unemployed by Initiative	Estimated Unemployment Amount Per Worker	Estimated Total Unemployment Premiums Paid	Average Annual Unemployment Premiums Paid by State
2021 ($11)	38,512	3,877.10	$52,260,206.32	$17,420,068.77
2022 ($11)	33,150	3,877.10	$44,984,052.75	$11,246,013.19
2022 ($12)	64,236	4,085.10	$91,843,669.26	$22,960,917.32
2023 ($12)	56,895	4,085.10	$81,347,617.58	$20,336,904.39

[3] https://labor.mo.gov/DES/Claims/calculator. A 2015 law decreased the unemployment benefit period from 20 weeks to 13 weeks, but the Supreme Court of Missouri struck down the law in July 2016.

2023 ($13)	95,281	4,293.10	$143,167,801.39	$28,633,560.28
2024 ($12)	50,220	4,085.10	$71,803,802.70	$11,967,300.45
2024 ($13)	85,861	4,293.10	$129,013,450.69	$21,502,241.78
2025 ($13)	77,256	4,293.10	$116,083,706.76	$16,583,386.68
2026 ($13)	69,349	4,293.10	$104,202,767.17	$13,025,345.90

3. Impact on State Income Tax Revenue

The 2012 analysis prepared by Dr. Macpherson may also be used as a reference in calculating the effect of the initiative petitions on state income tax revenue. Here, again, it is reasonable to assume that our "affected workers" are evenly distributed, though precise CPS–ORG data would also provide a reliable estimate. Here, the increased income tax revenue is the additional income tax paid by workers whose wages increase. There is a loss of revenue, however, in the form of decreased income tax paid by workers whose wages decrease and businesses who absorb the increased cost of labor, rather than passing it along to customers.

For the purposes of these estimates, we assume that workers work 40 hours a week and 52 weeks per year:

Year of final prescribed wage increase	Estimate of Workers Affected	Estimate of Missouri Workers Unemployed by IP	Estimate of Missouri Workers with Increased Wages	Annual Increase in Wages Paid to Workers who get Wage Increase in Final Year	Annual Decrease in Wages Paid to Workers now Unemployed
2021 ($11)	174,897	38,512	136,385	$382,969,080.00	$108,141,696.00

2022 ($11)	162,262	33,150	129,112	$342,405,024.00	$87,913,800.00
2022 ($12)	225,866	64,236	161,630	$596,737,960.00	$237,159,312.00
2023 ($12)	212,532	56,895	155,637	$550,332,432.00	$201,180,720.00
2023 ($13)	275,061	95,281	179,780	$822,673,280.00	$436,005,856.00
2024 ($12)	199,683	50,220	149,463	$505,184,940.00	$169,743,600.00
2024 ($13)	261,136	85,861	175,275	$774,715,500.00	$379,505,620.00
2025 ($13)	247,695	77,256	170,439	$726,750,021.03	$329,419,584.00
2026 ($13)	234,683	69,349	165,334	$679,192,072.00	$284,885,692.00

These net wage increases will lead to corresponding increases in state income tax collections. Traditionally, it has been assumed that about 50% of affected workers will pay 6% income tax, while the other 50% of workers pay no state income tax. This assumption may be less accurate at the higher wage increases contemplated by the Initiative Petitions. Accordingly, figures are also displayed assuming that about 75% of affected workers will pay 6% income tax, while the other 25% of workers pay no state income tax.

Annual Net Increase in Wages Paid To Workers	Annual Income Tax Increase from Wage Increase (50% pay tax)	Annual Income Tax Increase from Wage Increase (75% pay tax)
$274,827,384.00	$8,244,821.52	$12,367,232.28
$254,491,224.00	$7,634,736.72	$11,452,105.08
$359,578,648.00	$10,787,359.44	$16,181,039.16
$349,151,712.00	$10,474,551.36	$15,711,827.04
$386,667,424.00	$11,600,022.72	$17,400,034.08
$335,441,340.00	$10,063,240.20	$15,094,860.30

$394,306,380.00	$11,829,191.40	$17,743,787.10

Graves Garrett LLC

Based on these figures, Missouri businesses must also decide whether to pass along any increase in wage costs (wages and mandatory payments).[4]

Year of final prescribed wage increase	Annual Cost to Business from Increased Wage	Annual Decreased Corporate Income Tax if cost is fully absorbed	Annual Decreased Corporate Income Tax if cost is 50% absorbed
2021 ($11)	$412,266,214.62	$25,766,638.41	$12,883,319.21
2022 ($11)	$368,599,008.34	$23,037,438.02	$11,518,719.01
2022 ($12)	$642,388,413.94	$40,149,275.87	$20,074,637.94
2023 ($12)	$592,432,863.05	$37,027,053.94	$18,513,526.97
2023 ($13)	$885,607,785.92	$55,350,486.62	$27,675,243.31
2024 ($12)	$543,831,587.91	$33,989,474.24	$16,994,737.12
2024 ($13)	$833,981,235.80	$52,123,827.23	$26,061,913.62
2025 ($13)	$782,346,397.64	$48,896,649.85	$24,448,324.93
2026 ($13)	$731,150,265.50	$45,696,891.59	$22,848,445.80

Assuming businesses absorb half of the cost of increased wages, and 75 percent of affected workers pay the new, higher taxes, the effect on state income tax collections is estimated to be:

Year of final prescribed wage increase	Annual Net Income Tax Revenue Loss
2021 ($11)	($516,086.93)
2022 ($11)	($66,613.93)
2022 ($12)	($3,893,598.78)
2023 ($12)	($2,801,699.93)
2023 ($13)	($10,275,209.23)
2024 ($12)	($1,899,876.82)
2024 ($13)	($8,277,469.02)
2025 ($13)	($6,568,455.26)
2026 ($13)	($5,104,658.70)

[4] A healthcare benefit cost estimate is not available based on the time limitations imposed by this fiscal note.

Graves Garrett LLC

4. Sales tax revenue gain or loss

Projecting any increase in sales tax revenue resulting from an increased minimum wage would require the auditor's office to conclude, based on data separate and apart from the sheer conjecture typically offered by political activist groups: (1) the net effect on consumer disposable income and (2) the percentage of a consumer's disposable income that is spent on goods subject to the sales tax, taking into consideration that the scope of Missouri's sales tax has been truncated by a voter-approved constitutional amendment from November 2016.

Typically, the Auditor's office multiplies the total increase in worker earnings (which should be adjusted for employment reductions) and multiplies the result by 25 percent, then multiplying that figure by the Missouri the population weighted combined average state and local sales tax in Missouri, 7.81%.[5] Based on this estimate, the population-weighted combined average local sales tax is 3.585%.

However, it would be deceptive to fail to account for sales tax losses from workers whose wages are eliminated or sales tax losses from reduced business profits (attributable to the higher wages paid), which will lower spending by business owners. The first figure is calculable by determining the total annual wages (adjusted for employment deductions) for all workers who lose jobs due to a minimum wage hike, multiplied by 25 percent. The second number is calculable by multiplying the total increase in worker earnings (multiplied by 1.0765 to account for Social Security and Medicare taxes) by approximately 15 percent.[6]

Year of final prescribed wage increase	Annual Net Increase in Wages Paid To Workers	New Wages Spent on Sales Tax Items	Annual Cost to Business from Increased Wage	Annual Business Income No Longer Included in Sales Tax Base (50% passed-through)
2021 ($11)	$274,827,384	$68,706,846	$412,266,214.62	($61,839,932)
2022 ($11)	$254,491,224	$63,622,806	$368,599,008.34	($55,289,851)
2022 ($12)	$359,578,648	$89,894,662	$642,388,413.94	($96,358,262)
2023 ($12)	$349,151,712	$87,287,928	$592,432,863.05	($88,864,929)

[5] http://taxfoundation.org/sites/taxfoundation.org/files/docs/LOST--2015.png.
[6] This estimate would also need to be adjusted to reflect certain employers' mandate under the Affordable Care Act to provide healthcare coverage and pay 60 percent of such coverage.

2023 ($13)	$386,667,424	$96,666,856	$885,607,785.92	($132,841,168)
2024 ($12)	$335,441,340	$83,860,335	$543,831,587.91	($81,574,738)
2024 ($13)	$395,209,880	$98,802,470	$833,981,235.75	($125,097,185)
2025 ($13)	$397,330,437	$99,332,609	$782,346,397.64	($117,351,960)
2026 ($13)	$394,306,380	$98,576,595	$731,150,265.51	($109,672,540)

Accordingly, the annual estimations of the effects on state and local revenue, and total state economic impact are as follows:

Year of final prescribed wage increase	Annual Net Income Tax Revenue Loss	Annual Net Effect on State Sales Tax	Total Annual Effect on State Tax Revenue	Total Net Loss to State Government from Taxes and Unemployment Insurance	Annual Net Effect on Local Sales Tax
2021 ($11)	($516,086.93)	$290,127.11	($225,959.82)	($17,646,028.59)	$246,178.86
2022 ($11)	($66,613.93)	$352,067.34	$285,453.41	($10,960,559.78)	$298,736.43
2022 ($12)	($3,893,598.78)	($273,087.10)	($4,166,685.88)	($27,127,603.19)	($231,720.06)
2023 ($12)	($2,801,699.93)	($66,628.31)	($2,868,328.24)	($23,205,232.64)	($56,535.50)
2023 ($13)	($10,275,209.23)	($1,528,364.68)	($11,803,573.91)	($40,437,134.18)	($1,296,849.08)
2024 ($12)	($1,899,876.82)	$96,566.47	($1,803,310.36)	($13,770,610.81)	$81,938.65
2024 ($13)	($8,277,469.02)	($1,110,951.72)	($9,388,420.74)	($30,890,662.52)	($942,665.55)
2025 ($13)	($6,136,139.31)	($761,317.55)	($6,897,456.87)	($23,480,843.55)	($645,993.71)
2026 ($13)	($5,104,658.70)	($468,803.67)	($5,573,462.37)	($18,598,808.26)	($397,789.62)

5. Damage to small business

Additionally, any proponent or opponent fiscal note submission is required, pursuant to Missouri law, to state the impact of the initiative on small businesses. According to analysis by the Employment Policies Institute, 40 percent of the minimum wage workforce is employed at businesses with fewer than 50 employees. [7] The impact on extra costs to small business may be more significant than even this 40% figure suggests. Small businesses are more easily shut down by input price increases than large businesses, which have greater access to capital to weather the

[7] https://www.epionline.org/oped/who-really-employs-minimum-wage-workers/

storm. Clearly, small businesses that do not shut down due to increases in the minimum wage will pay higher costs, estimated at about 40% of business' total increased costs, described above.

Conclusion

In conclusion, the State Auditor should attempt to quantify the increased cost to be borne by state and local government entities through increased contracting costs as a result of an increase to the minimum wage. This direct cost is outlined in Section 1.

Indirect costs are outlined in Sections 2 through 5, and show a net loss. Although such second-order effects more difficult to predict, a net loss is easily the most likely outcome. Significantly, this result is only obtainable if the Auditor reviews both the "credit" and "debit" sides of the transfer of wealth from businesses to workers. The Auditor should refrain from taking the proponents' likely invitation to consider and present only the "credit," side, and should attempt to provide a complete picture of all effects of a minimum wage increase, including the loss of revenue to state and local governments from individuals who lose employment. Only conveying (or quantifying) the potential for gain, without fairly conveying the likelihood of net loss, would be deceptive and unfair.

The State Auditor's previous 2018 fiscal notes are a good model. Each of the fiscal notes for the Initiative Petitions should follow the already-established format and state that:

> "[O]perating costs could increase by an unknown annual amount that could be significant. State and local government tax revenue could change by an unknown annual amount ranging from a $## million decrease to a $## million increase depending on business decisions."

Should you desire further detail or have any questions about this fiscal impact statement, please do not hesitate to contact me.

Sincerely,

Edward D. Greim

ABOUT THE MISSOURI RESTAURANT ASSOCIATION

With origins dating back to 1916, the Missouri Restaurant Association (MRA) is a statewide trade association representing over 1,500 member establishments. The association's membership is diverse, and includes full service, fast casual, and quick service restaurants, cafeterias, hotels, schools, institutions, contract feeders, and ancillary foodservice providers such as theme parks. The association has been successful in securing support from virtually every segment of the foodservice and hospitality industry.

MRA includes seven chapters as extensions of the parent organization, each with its own Officers, Board of Directors, and limited budget. The association is governed by a Board of Directors comprised of five Officers, 33 Directors, and each President of the seven affiliated chapters.

MRA is dedicated to serving the needs of the foodservice and hospitality industry, enhancing and improving its growth and development, assisting and educating its members in operating more effectively, improving the political and social environment in which the industry conducts business, for the benefit of its members, patrons, employees, and the well-being of the community.

David A. Macpherson is the E.M. Stevens Professor of Economics at Trinity University. He received undergraduate and doctoral degrees in economics from Pennsylvania State University.

Dr. Macpherson has published over 60 articles in leading economics and real estate journals including Review of Economics and Statistics, Industrial and Labor Relations Review, Journal of Labor Economics, Journal of Human Resources, and Journal of Real Estate Economics and Finance. His research has been funded by a variety of entities including the National Science Foundation, Florida Legislature, and the National Association of Realtors. He is co-author of the undergraduate labor economics text, Contemporary Labor Economics, as well as the principles of economics text, Economics: Private and Public Choice. He is included in Who's Who in Economics, Fourth Edition, which includes the 1,200 most frequently cited economists.

THE IMPACT OF A $10.10 MINIMUM WAGE ON JOBS AND TAXPAYER COSTS IN MISSOURI

June 2014

Economic Analysis by **Dr. David Macpherson**

Index

Executive Summary 4
Results 5
Technical Appendix 7

EXECUTIVE SUMMARY

Missouri's minimum wage of $7.50 is linked to rise in most years with the inflation rate. But some state legislators and labor unions would like to raise that figure even higher. For instance, a recent labor union-organized bus tour in the state promoted a $10.10 minimum wage in St. Louis.

Proponents have enthusiastically pointed to the benefits of the $10.10 policy. But there's been far less discussion of the costs involved with a $10.10-an-hour minimum wage—both the cost on employment, and the cost to taxpayers.

In this study, labor economist David Macpherson of Trinity University uses Census Bureau data to estimate the impact on Missouri's labor market and budget from raising the minimum wage to $10.10 an hour. He also provides separate results for the St. Louis metropolitan area.

Dr. Macpherson's employment estimates follow the methodology used by the nonpartisan Congressional Budget Office in its report earlier this year estimating the impact of a $10.10 minimum wage nationwide, which in turn relied on 60 different empirical studies to formulate its estimates.

Statewide, he finds that over 15,000 jobs would be lost at the $10.10 wage level—with 9,300 of those jobs being held by women. In the St. Louis metropolitan area, approximately 4,800 jobs would be lost from a $10.10 minimum wage.

The cost to taxpayers would be significant: There are approximately 40,000 state and local employees whose wages would be affected by the $10.10 increase in Missouri, for a combined cost to taxpayers of $87 million annually.

Raising wages is an admirable goal, but the evidence suggests that accomplishing this goal with a blunt wage mandate could do more harm than good.

RESULTS

The minimum wage is one of the most hotly-debated topics in the political world. Some legislators claim that a higher base wage will stimulate the economy; others claim that it will reduce jobs when affected employers can't offset the higher costs through higher prices.

Economists, who have studied the issue since the late 1940s, tend to take a skeptical view of minimum wage increases. Since the early 1990s, for instance, roughly 85 percent of the most credible research on the minimum wage points to job loss for less-skilled groups. The nonpartisan Congressional Budget Office (CBO), in an evaluation of President Obama's proposed $10.10 minimum wage increase, reviewed 60 different studies and concluded that the policy would eliminate 500,000 jobs if enacted.

The estimates that follow, of the employment impact of a higher minimum wage on Missouri's labor market, were performed by Dr. David Macpherson of Trinity University. Dr. Macpherson followed closely the methodology used by the CBO in its 2014 report. Dr. Macpherson also estimates the taxpayer costs of a higher minimum wage, as many state and local public employees will see their earnings increase when the minimum wage rises.

Dr. Macpherson's methodology is presented in detail in a technical appendix.

Estimated Employment Effects of a $10.10 Minimum Wage in Missouri

Statewide, Dr. Macpherson finds that increasing the minimum wage to $10.10 would eliminate over 15,000 jobs—approximately 60 percent of which are jobs held by women. The bulk of the job losses would be concentrated among individuals with a high school degree or less, and among people who work in the retail or leisure & hospitality industries.

(Note: Totals have slight discrepancies due to rounding.)

City-Specific Minimum Wage Employment Impacts

The city of St. Louis has been the subject of a number of protests calling for a higher minimum wage. Dr. Macpherson analyzed the employment impact of a $10.10 minimum wage in the St. Louis metropolitan area, providing breakouts by gender and education where the data permits. He estimates that the wage hike would eliminate approximately 5,000 jobs—just over half of which would be jobs held by women.

Missouri Taxpayer Costs of a $10.10 Minimum Wage

Dr. Macpherson estimates that approximately forty thousand state & local public employees would be affected by a minimum wage increase to $10.10 an hour. These additional wage costs translate to new costs for state and local taxpayers. Following the methodology described in detail in the technical appendix, Dr. Macpherson estimates both the straight wage cost of a $10.10 minimum wage, as well as the total compensation cost with Social Security, Medicare, workers compensation, and unemployment insurance included. Statewide, taxpayers would shoulder an additional $87 million in costs if the base wage was increased to $10.10 an hour and public employees were covered by the new wage.

Missouri Taxpayer Costs of a $10.10 Minimum Wage	
# of State & Local Workers	304,588
# Affected By $10.10 MW	40,103
Annual Wage Cost	$79,629,374
Annual Compensation Cost	$87,004,355

Note: Annual compensation costs include the cost of worker's compensation, FICA, and unemployment insurance benefits.

TECHNICAL APPENDIX

Estimating Employment Loss and the Cost to State and Local Government of an Increase in the Minimum Wage

Dr. David Macpherson
E.M. Stevens Professor of Economics
Trinity University

This paper describes how we estimate the employment loss and the cost to state and local governments of a proposed increase in the minimum wage effective on January 1, 2015.

Data and Sample

First, we use data from the Current Population Survey (CPS) Outgoing Rotation Groups (ORG) from January 2011 through December 2013. For each worker in the sample, we calculate their wage rate. We also adjust the wage rate to reflect a forecast of wages in 2015. This is done in two steps. First, based on legislation enacted as of April 2014, we estimate the minimum wage that would be in effect in January 2015 for each state and city that we consider. If a state or city has an indexed minimum wage, we increase the January 2014 state or city minimum wage by the Congressional Budget Office (CBO) inflation forecast for 2014 of 1.7%.

Since we use data from 2011 through 2013, we also follow the CBO approach for forecasting what the wage distribution would be in 2015. This is done in two steps. First, we adjust wages observed prior to 2013 to reflect 2013 minimum wage legislation. For example, if the minimum wage in a state was $7.25 in 2011 and grew to $8.00 by 2013, anyone who earned between $7.25 and $8.00 in 2011 would have their wage increased to $8.00. After wages are adjusted to 2013 levels, we assume that all wages grow by 2.9% in 2014. Using the resulting 2015 distribution of wages, we adjust for minimum wage legislation that would increase the minimum between 2013 and 2015. Anyone earning a wage between the 2013 and 2015 minimum wage is assigned a wage matching the 2015 minimum wage.

After generating the forecast 2015 distribution of wages reflecting wage growth and existing minimum wage legislation, we identify workers who would be affected by additional changes to the 2015 minimum wage as those with wages between the predicted minimum wage legislated for 2015 (or up to $.25 below it) and the proposed minimum.

To estimate the number of affected workers, we take two steps. First, for each state, we estimate the number of affected workers for 2013. Second, we adjust the weights in the 2011 and 2012 data so that the state-specific number of affected workers implied by the 2011 and 2012 data matches that for 2013. This adjustment is designed to correct for the changing economic climate as the economy recovers from the great recession and to generate estimates that are as close as possible to the most recent data (2013). After we adjust the 2011 and 2012 weights, we estimate the number of affected workers by summing their earnings weights and dividing the total by 36 (the number of months of data).

[1] Also, following CBO, anyone earning up to $.25 less than the 2011 minimum wage would have their wage increased by the amount that the minimum wage increased (i.e. a $7.00 wage would be increased to $7.75 in this example). This approach is used to adjust for the fact that many workers round their answers when asked about their wage.

TECHINCAL APPENDIX CONTINUED

Employment Loss

To estimate employment loss, for each affected worker we compute:

L = e *(Proposed Min Wage /Min Wage 2015 – 1)

where e is an assumed elasticity of employment with respect to changes in the minimum wage, Min Wage 2015 is the minimum wage currently legislated for 2015, and Proposed Min Wage is the minimum wage that is being proposed for 2015. Thus, for example, if a worker is projected to earn the federal minimum of $7.25 in 2015, the expected reduction in employment resulting from a $10.10 minimum wage in 2015 if e=.45 is .45*(10.10/7.25 – 1) = .18. That is, for every 100 workers currently earning the federal minimum, the expectation is that 18 would lose a job if the minimum wage elasticity is .45.

To estimate the aggregate employment loss in the economy, we use earnings weights to sum L across workers. We also follow the Congressional Budget Office (2014) and use an elasticity of 0.15 for non-teenagers and 0.45 for teenagers.

Cost to State and Local Government

We use the same data to estimate the cost to state and local government of a proposed minimum wage hike. We apply the same definition of affected workers described above and estimate the number of state and local government workers affected by a minimum wage hike. We do not, however, assume that there is any job loss for state and local workers as we do not have an appropriate elasticity estimate specific to state and local workers. To the extent that state or local governments reduce hours or employment in response tothe minimum wage hike, our estimate of the cost of the hike would be overstated.

To estimate the increase in annual payroll cost resulting from an increase in the minimum wage, we estimate the increase in annual cost for each worker as:

(Proposed Min Wage-Min Wage 2015)*weekly hours*52

We then multiply the increase in annual cost by the earnings weight for each worker and sum across workers. Since an increase in wages also requires increased employer contributions for Social Security, Medicare, workers' compensation and unemployment insurance, we apply an estimate of the payroll tax rate for these mandatory programs to calculate the additional cost for these programs.

For each state and city considered, we provide tables summarizing the number of affected workers, employment loss, and the distribution of employment loss by sex, education, race, age and industry. Given that we use three years of data, a rule of thumb for minimum sample size required to achieve a reasonably accurate estimate of the employment loss is to require at least 30,000 people be in the relevant category. For example, if there are fewer than 30,000 people projected to be in a particular industry category, the Bureau of Labor Statistics would not report the estimate due to a lack of reliability based on the variance of the estimate relative to its mean.

In addition to the estimate of employment loss, for each state or city considered, we estimate the number of state and local workers that would be affected by the minimum wage hike and the total annual cost to government in terms of wages and total compensation. As with the employment estimates, we advise caution in interpreting estimates that are based on fewer than 30,000 affected workers.

[3] Congressional Budget Office, "The Effects of a Minimum-Wage Increase on Employment and Family Income," February 2014.

[4] For workers paid by the hour the reported hourly wage was used. For workers who are not paid by the hour, we calculate the hourly wage by dividing usual weekly earnings by usual weekly hours. Overtime pay was calculated as time and one-half for hours above 40 hours for hourly workers.

[5] The assumed payroll tax for Medicare and Social Security is 7.65 percent. To estimate the payroll tax for workers' compensation and unemployment insurance, we use unpublished data from the 2010 Employer Cost of Employee Compensation database for state and local workers in the relevant region in 2010.

FISCAL ANALYSIS
OF
PROPOSED STATUTORY INITIATIVE PETITIONS 2012-084 AND 2012-085

Prepared for

Victor Allred versus Robin Carnahan and Thomas Schweich
Circuit Court of Cole County, Missouri

FISCAL ANALYSIS
OF
PROPOSED STATUTORY INITIATIVE PETITIONS 2012-084 AND 2012-085

I. Introduction

This report was undertaken at the request of counsel representing plaintiffs in the case of Victor Allred versus Robin Carnahan and Thomas Schweich. As part of the basis of the lawsuit, the plaintiffs allege that the fiscal note summaries for proposed statutory initiative petitions 2012-084 and 2012-085 are insufficient and unfair. I was asked by counsel to evaluate the fiscal impact of proposed statutory initiative petitions 2012-084 and 2012-085.

The results of my analysis indicate:

(1) labor costs to state and local government entities, based on state auditor fiscal notes, will rise by more than $1,352,182. A more inclusive estimate indicates that state and local government labor costs will increase by $16,003,712;

(2) unemployment benefit costs will rise by $4,397,510 during the first year of the minimum wage increase;

(3) individual income tax revenue will rise by at most $4,078,088;

(4) the loss in corporate income tax revenue could be as high as $9,243,105;

(5) state and local sales tax revenue will rise by at most $2,919,327;

(6) during the first year: state and local governments will incur increased costs of $20,401,222; the change in state and local government revenue will

range from -$2,245,690 to +$6,997,415; and the net state and local government fiscal impact will range from -$22,646,912 to -$13,403,807.

The report is organized as follows. My qualifications to prepare this report are contained in Section II. Section III describes the data and records I relied upon for this report. Section IV reviews the estimated fiscal impact of proposed statutory initiative petitions 2012-084 and 2012-085. A summary and my conclusions are provided in Section VI.

II. Qualifications

I am currently the E.M. Stevens Professor of Economics at Trinity University in San Antonio, Texas. Previously, I was employed by Florida State University as Director of the Pepper Institute on Aging and Public Policy and the Rod and Hope Brim Eminent Scholar in Economics. I have taught both undergraduate and graduate Econometrics (statistical analysis of economic data), and Labor Economics. I have published over 50 articles in peer-reviewed professional journals.

I am currently serving on the editorial board of the *Journal of Forensic Economics*, which is a peer-reviewed journal. I have also served as a reviewer or 'referee' for 24 peer-reviewed journals, including the *Journal of Human Resources, Journal of Labor Economics, Quarterly Journal of Economics,* and the *Review of Economics and Statistics*. Based upon these experiences, I am very familiar with the scholarly and professional research process and the concept of peer review.

I have prepared numerous analyses and reports that use statistical methods as applied to specific questions. I have been responsible for developing the techniques and approaches required for these analyses. I routinely use computers and statistical software packages to assist me in my analytical work. I have been qualified as an expert witness on statistical analysis of employment discrimination and economic damages in state courts in Florida and Georgia and Federal Courts, and I have given expert testimony. I have prepared analyses and offered testimony on behalf of both plaintiffs and defendants.

Details of my qualifications are reflected in my current resume and legal cases, attached as Appendix A to the report.

III. Data and Records

I reviewed the following materials in preparing this report.

- Plaintiff's Complaint
- Material cited in footnotes below.

IV. Fiscal Impact

A. Overview

The proposed statutory initiative petitions 2012-084 and 2012-085 contain many elements in common. Both initiatives would increase the Missouri minimum wage to $8.25 per hour, alter the exemption for retail and service firms, raise the cash wage of tipped workers from 50% to 60% of the minimum wage, and increase the statute of limitation from two to three year for underpayment claims.

The initiatives differ in their linkage to the federal minimum wage. Initiative petition 2012-084 requires that the state minimum wage be automatically increased to the

federal minimum wage if it is higher than the state minimum wage. Initiative petition 2012-085 does not have such a linkage. It only requires that workers be paid the higher of the state minimum wage or the federal minimum wage. The linkage to the federal minimum wage will cause the state minimum wage to be higher under initiative petition 2012-084 over time. This is because the state minimum wage, in contrast to the federal minimum wage, is adjusted for inflation as measured by the Consumer Price Index.

An increase in the minimum wage in Missouri will affect state and local government entities in two ways. First, it will directly increase the cost of labor to state and local government entities. This will occur due to the increase in wages of state and local government workers earning between the existing minimum wage of $7.25 and the new minimum wage of $8.25.[1] In addition, workers laid off due to the minimum wage increase can collect unemployment benefits. The state government will bear the cost of unemployment benefits of these workers for the first 20 weeks. Second, state and local government may gain increased revenue through higher income tax and sales taxes paid by workers affected by the minimum wage who remain employed. However, state and local government will suffer reduced tax revenue to the extent the higher wage cost lowers profits of businesses.

The following sections estimate the cost and revenue effects to state and local government entities of the proposed minimum wage increase.

[1] Information about the minimum wage in Missouri is available at http://www.labor.mo.gov/DLS/minimumwage/.

B. Direct Labor Cost Impact on State and Local Government Budgets

There are two possible ways to measure the direct labor cost on state and local government budgets. First, one can use the information included in the fiscal notes prepared by the State Auditor regarding the proposed initiatives. It is important to note that the fiscal notes provide an incomplete and thus too low estimate of the direct labor cost. The fiscal notes indicate that the Office of Administration's (OA) Division of Personnel reported that as of September 2011 there were 834 state workers who would be affected by an increase of the minimum wage to $8.25 and the "approximate annual cost" would be more than $540,000.

This OA estimate excludes seasonal workers such as State Fair employees, State Parks Employees, and tax season staff. The Division of Revenue noted its labor cost would rise by $40,000. The Division of Natural Resources stated they have over 500 workers who would be affected by the increase, but did not provide an estimate of the cost. The State Fair hired 745 workers that would be affected, but no cost estimate was provided.

Thus, the cost to state government, based on the fiscal notes, would be more than $580,000.

The fiscal notes also provide an incomplete and thus too low measure of the cost to local government and public educational institutions. Many cities and educational institutions did not respond to Office of Auditor's survey or provide an estimate of the cost of the higher minimum wage. The City of Columbia, City of Jefferson, City of

Joseph, Linn State Technical College, and Metropolitan Community College did provide such an estimate. The total cost to these five institutions is $772,182.

Based on the fiscal notes, the cost to state and local government entities of the increase in the minimum wage to $8.25 will be more than $1,352,182.
